Koan : 4 folders Athens 25.VII.80

Folder 1) 4 plates of new types (suppl.) are spread out. They need to be trimmed and fixed. The catalogue of 27.VIII.71 has to be redone by adding the new material. File cards are kept in the paper box.

2) The catalogue and 2 plates of unread koan by devices (Corpus no. 752-777) is typed. 3 plates ready; I have to add few new published examples from Odessos and Tanais, Rhodes.

✓done 29.7.80

3) 3 plates of unread (?) tentative readings are ready. The catalogue is to be typed after the end of the above no. 2 (unread by devices) File-cards are kept in the paper box.

4) There is one plate (suppl.) made ~~from~~ previous year. ~~to~~ where are included new ~~ex~~ examples much better to illustrate. We have to add more examples

5) Maggie has started to enter the new examples in the corpus catalogue, concordance, site cards etc. She has left a note of what she has already done.

At Varna Museum

1) is it Koan or non-double?: Mircev, Timbres anphoriques du Musée de Varna no. 288, read Ἡρακλείδου because the answer of Lazarov "un nom de producteur sinopien" is not satisfactory

2) Mircev, ibid. no. 296-297 and plate XXXVIII, 2-3, read Μενίσκου. According to Mr. Lazarov they are non-double. Could we have a photo showing the top of the handle with the stamp and not only the stamp?

Percentages -

Extrapolating from Coan handles picked up on a walk (Emporion)

He himself is probably not taking into account possible differences in date between stamped and many or most of the unstamped. So he may be working his percentages among non-contemporary pieces. Say, in the 3rd B.C. most were stamped, but only on one handle, having 50% unstamped. But in ~~post-BC accumulation~~, late 1st BC or later, none were stamped. Maybe most of those picked up on that walk were late?
