

Aischylinos, ep.

3d BC, 1st half

Hiller's 180-150 based on occurrence of  
a handle in Carthage and none in Perg.

Agora context: though not definite  
suggests 3d BC.

Internal evidence: arched handles with  
hint of angle (?). Character of several  
stamps connects them with those of the  
Pausanias who is contemporary with HAT  
Group B. (See analysis of early Rhodian  
deposit in E.) Use of symbol for Helio  
is early.
