* Note this sec. stamp (rose) appears on stamps of Δαμοκράτης (see sec stamp file) and, apparently from jars of Σαφισκράτης on stamps naming Καλλι-κράτης and Κλευκράτης, eponyms: see Tarsos № 75 A and B with context of mid. 3rd to early 2nd B.C.

For sec. stamps in Pergamon, see p. 484

29.X.59 Add Σάφισκος from handles found in 1959 excavations at Pergamon (AS 226).

⊕ Also unaccounted for in the analysis is SS11794, K 1695. The SS card has not been found, there is no reading in the notebook, and we have not been able to make a reading from the leica contact there, but can see that it is a round stamp with rose, double circle, 3rd cent.

MSBF - notes on Analysis of Rhodian

with

This and all other categories must be checked against the general list - perhaps using the picture books - to make sure items have not been omitted: today it was noted that SS 726 (EYKPATIAΔΣ) does not appear in the analysis though it is listed. (Has been squeezed in.)

With ME, went through the names listed, making notes on prpsopography (Fabric was checked by look at SF cards, as to number present in MSBF, and their approx. date by fabric. Ir-
relevantly early handles or names are marked on the typed list with a cross.
Especially for the fabs., these notes on the prosop. cards are often ~~thar~~ the first chronol. records made for the individual. Some corrections made, in readings and in records, as a result of this check.

Cf. with Pergamon deposit: items from Pergamon of the same type as MSBF items are listed in the last column. Further, a check was made between names listed here (MSBF) and names in Pergamon, and names not marked as "early" (by the pencil cross) may be taken to appear in Pergamon unless "none" has been written in red in the Pergamon column. A list has been made separately of names which appear in Pergamon and do not appear in the MSBF, with the number of examples in Pergamon. Of particular interest are some eponyms in this list, especially ^{ΑΡΙΣΤΟΤΕΛΕΣ,} ~~ΑΡΙΣΤΟΤΕΛΕΣ~~ ^{and ΑΡΙΣΤΟΤΕΛΕΣ} ~~ΑΡΙΣΤΟΤΕΛΕΣ~~ with 21 in Pergamon. They seem to be consistently ~~late~~ slightly late as compared with MSBF, and suggest that the Pergamon deposit goes down a few years beyond the MSBF; note that the P. dep. includes a ^{Kn.} stamp of ΘΕΥΛΟΞΙΟΣ. No. of Θεοφύλων, who is MSBF (SI.V.56)

Cf. with eponyms appearing on handles with sec. stamps at base of handle: it now looks as if these are just beginning at the period of MSBF. Only one is included, SS 12717, with small rose, apparently an early kind, used by ΔΑΜΟΚΡΑΤΗΣ. Of the eponyms in MSBF, only six are known with sec.st.: ΑΡΙΣΤΕΙΑΑΣ, ΑΡΙΣΤΩΝ (both with only one ex. in MSBF), ΘΕΑΙΑΗΤΟΣ; ΚΑΕΥΚΡΑΤΗΣ, ΕΝΟΦΑΝΗΣ, ΕΝΟΦΑΝΤΟΣ. (I do not list with these ΚΑΛΗΚΡΑΤΗΣ, ΝΙΚΑΖΑΓΟΡΑΣ or ΠΑΥΖΑΝΙΑΣ, because the sec. st.s go with the later homonym, not with the ep. in MSBF; I omit to list also the ep.s on jars of ΑΙΕΚΟΣ where a sec. st. is set on top, next to the main stamp, an arrangement which seems to precede the base-of-handle one.)

Note that sec.st.s appear with all the eponyms that are in Perg. and not in MSBF.

On Date of Latest MSBF Rhodian

The notes on analysis of Rhodian dated 25.VI.55 point out that there are some names of papyrus with many c.p.s. at Pergamon and none in the MSBF, and that they are consistently late as compared with material in MSBF. So it is suggested that the lower limit of MSBF is before 180, say 190.

However note the Rhodian papyrus listed in the Interim Report of 6.VII.50 as "apparently 8th dated toward the end of the first quarter": (Selected for Rhodian only as far as the variables)

A few handles belong to types not fully read or not understood:

KT 345	SS 570 686	These two types are possibly both of the same fabricant K[and perhaps XXXX both name the eponym ΔΑΜΟΓΕΝΗΣ (variously abbreviated), adding 5 to his already large number.
KT 2012	SS 546 997 12884	
KT 693	SS 719	
KT 1312	12529	
		ΕΠΙΔΑ/ΘΕΥ in which the ΔΑ may be again the same eponym, or the title ΔΑΜΙΟΡΤΟΣ
		ΑΡΙΣ/ΕΠΙ

The following Knidian must be listed for the present as not read:

SS 560

SS 12046

715 (KT 1767, with club)

12390 (cf. KT 398)

1285 (possibly with club)

12391

11705 (circular)

12392

11828 (with bar)

12696

11871 (circular)

12749

11890 (with bar)

12789

11986

12794 (possibly with club? MAPON?)

12876

12041 (bars, poss. OPAZON)

12907

The following Knidian listed in the original typed deposit list issued by the Catalogue Dep't, under Section O, are excluded as too late:

SS 499

589

591

670

757

870

890

1008

1135

1151

1266

All of duoviri period save SS 757, 870, 1135, 1151,

which are late second, or third, quarters of the 2nd cent.

The rejection of this list is supported by GRE, except for 1135 and 1151, which were added after his investigations of context. By these investigations he found all the list I gave him to be from fill which should not be associated with the Middle Stoa.

The following Knidian found in 1953 are rejected as too late although the other handles catalogued as from the same finding place are incorporated in the list and analysis:

SS 11826 (MZ 135): duoviri period (KT 605)

12295 (K 1936): ΑΣΤΙΘΕΟΣ, term of ΑΣΚΑΝΗΙΑΑΗΣ (sometimes a phour.) (KT 531)

12422 (K 2074): ΘΕΥΑΣΠΙΑΣ (KT 755)

12918 (K 2515): duoviri period (KT 2112)

12959 (K 2563): Late Knidian, AA, after 88-86 B.C.

13056 (K 2674): duoviri period (KT 486)

Note that the kappa deposits are all called "possibly disturbed" save that of SS 12918.

SS 12295 and 12422 are before 150 B.C. but distinctly later than the body of the Knidian attributed to the MSBF.

3. VII. 57 Add to the Knidian the medallion P 23078 with only an unmarked handle pos.

Fabric of the handles: Those with cluster, and esp. the large group with uncertain device, do not look earliest Knidian: the top is not v. long, and it arches a little; handles thickish, rims rather Rhodian.

3rd 1/3 A ? 5m H. 1. H. fill at 48-52/13-15

In Bow: the earlier finds, not those of 1953.

The foregoing alphabetical series includes the names on stamps datable after about 340 B.C. The following have stamps of the same period as the above, the names having not yet been identified: SS 783 (triskeles), 907 (hand), 1139 (floral device, perhaps grapes), 1530 (device not made out), 11706 (horn), 11870 (vase, Type VIII?), 12312 (cornucopia?), 12422 (protome of stag).

The following are datable before about 340 B.C.: SS 679 (unread, with goat), 725 (THAEΦANHΣ- ? with helmet), 750 (APICTOKPATHΣ-NOZZOΣ with wheel), 1036 (ΣATYPOΣ-ΔAMA, no device), 11672 (HPOTIZ- ? ,vase, Type VI), 13042 (unread, with protome of stag). 13898 (TEAEI, KABOT)

Of the stamps in the alphabetical list, may guess that the following are of the second half of the 4th century: those naming AAKEIAHΣ, APICTOΦΩN (type with horn), HPAKAEITOΣ, OAZON, KAEOTON, KRINOMENHΣ?, NAYΣON, and ΦIAIZKOΣ; altogether 8 handles.

And that the following ~~are~~ are of the first half to middle third: those naming ΑΙΣΧΡΩΝ, ΗΡΑΚΛΕΙΑΗΣ (types with bow and caduceus), ΝΙΚΑΝΩΡ ΗΓΗ(, ΝΙΚΟΔΗΜΟΣ ΤΙ(ΜΟΚΡΑΤΕΟΣ), ΝΥΜΦΩΝ ΚΑΕΟ(, ΝΥΦΙΩΝ ΑΥ(or ΑΥ((Π. VII), ~~ΕΥΤΥΧΕΣ~~ ΣΙΜΑΛΙΩΝ ΑΘΗ(, ΦΙΛΩΝΙΑΗΣ ΣΙ(. (11 handles).

And that the following are of the middle to second half of the third: those naming ΑΝΤΙΩΝ, ΒΟΥΛΗΚΡΙΤΟΣ ΑΙ(ΣΧΡΙΩΝΟΣ ?), ΗΡΑΓΟΡΑΣ, ΗΡΟΦΩΝ ΒΑ(. (4 handles).

And that the following may be as late as early 2nd B.C.: those naming ΑΡΙΣΤΟΚΛΗΣ ΘΑΕΜΑΚΟΥ (see I.G. XII, 8, 293, 29, a theoros of this name), ΑΡΙΣΤΟΜΗΛΗΣ; ΑΡΙΣΤΟΦΩΝ (type with caduceus), ΗΡΑΚ[ΛΕΙΑΗΣ] (type with club), ΝΑΥΣΙΚΥΔΗΣ, ΝΥΦΙΩΝ ΙΧ, and ΤΕΛΕΣΗΝΩΡ. (8 handles). Parallels exist in the Pergamon deposit for the type naming ΑΡΙΣΤΟΜΗΛΗΣ, and for a type of apparently the same ΗΡΑΚΛΕΙΑΗΣ (no.1262), another of apparently the same ΑΡΙΣΤΟΜΗΛΗΣ (nos.1257-8). The type of ΑΡΙΣΤΟΦΩΝ is paralleled in the Komos cistern (SS 10266). Note that the club type of ΗΡΑΚ[ΛΕΙΑΗΣ] seems to be a recutting of the ~~by~~ club type of ΑΡΙΣΤΟΜΗΛΗΣ.

It should be remarked that parallels exist in the Pergamon deposit also for our type of ΝΥΦΙΩΝ VII with pilos and star, and for a type of ΣΙΜΑΛΙΩΝ ΑΘΗ((no.1267, wrongly restored). Both of these seem to me to date in the third century, not appreciably later than the middle. The deposit of course also contains one or two Rhodian 3rd century leftovers, such as a type of Mikythos.

(*) Acc. 8 19 XII, 8, p. 91, this inscr. date ± 140 BC. Has been noted before that $\theta\iota\omicron\varsigma\omega\varsigma$ seemed to run a little later than stamp naming perhaps same person.

XII, 8, 293, 29, a theoros of this name), ΑΡΙΣΤΟΜΗΛΗΣ, ΑΡΙΣΤΟΦΩΝ (type with caduceus), ΗΡΑΚ[ΛΕΙΑΗΣ] (type with club), ΝΑΥΣΙΚΥΔΗΣ, ΝΥΦΙΩΝ ΙΧ, and ΤΕΛΕΣΤΗΝΩΡ. (8 handles). Parallels exist in the Pergamon deposit for the type naming ΑΡΙΣΤΟΜΗΛΗΣ, and for a type of apparently the same ΗΡΑΚΛΕΙΑΗΣ (no.1262), another of apparently the same ΑΡΙΣΤΟΜΗΛΗΣ (nos.1257-8). The type of ΑΡΙΣΤΟΦΩΝ is paralleled in the Komos cistern (SS 10266). Note that the club type of ΗΡΑΚ[ΛΕΙΑΗΣ] seems to be a recutting of the ~~xy~~ club type of ΑΡΙΣΤΟΜΗΛΗΣ.

It should be remarked that parallels exist in the Pergamon deposit also for our type of ΝΥΦΙΩΝ VII with pilos and star, and for a type of ΣΙΜΑΙΩΝ ΑΘΗ((no.1267, wrongly restored). Both of these seem to me to date in the third century, not appreciably later than the middle. The deposit of course also contains one or two Rhodian 3rd century leftovers, such as a type of Mikythos.

MSBF - notes on analysis of C H I A N

with notes on other context

Fabric: handles of fine red clay usually with a light slip laid on a

rough surface. Take to be earliest those marked EPM or EPM Ω , parallels for which have been found in early third (Ch 5, from Kophina well stratum 2) and possibly late fourth (SS 8546, the dep. is called 4th BC by HSR in n.b.) centuries B.C. (No ^{record} other ~~example~~ of a stamped Chian handle earlier than 3rd B.C.). The handles are thick but not round in section, and the red of the clay has a good deal of yellow in it.

Handles of HPHZIOY close to those of EPM, though smaller, and clay and slip a little less yellow; one of his handles is SS 9989 from the Komos cistern. IKEZIOY probably follows here; there is variation, SS 1470 resembling HPHZIOY handles, while the other two have a dark surface under a sort of bloom slip and are nearer round in section; of 60-odd examples on file, some are perhaps considerably later than others, but 3 in any case were found in the Kophina well, top stratum, for which J. Anderson's last date seems to have been ca. 275-250 B.C. Φ IAI Σ TEY Σ perhaps follows here, then the latter

API Σ TO/ Γ ENOY: the two handles of ~~mix~~ are rather large, the section nearly round, the slip not yellow, its surface rather rough and grainy. AIONY Σ [probably fits in about ~~here~~ also ~~NOTEZI?~~ and HOZEIA Σ NIOZ?

here, SS 12754 with stamp of AN(E)AAEY(Σ) looks too late for the MSBF: nearly the whole handle is preserved, the HH was about .225, like that of P 3402 from Group E, and it arches a bit, like that; it is nearly round in section, small, with ash grey core and powdery light slip.

The jar handle of MOY(has a decided lateral twist. SS 12697 with monogram or abbreviation is distinctly less thick than the others, but clay and slip are characteristic, I think not of the earliest period of stamped jars.

So a number of the Chian from MSBF are third century or even earlier, while those we may guess to be close to the date of actual ostr. of MS are not precisely dated,

and one handle, SS 12754, seems too late for the deposit, perhaps as late as Group E. *(which the stamp has a name that appears in Perry's dep.)*

Note this latter comes from the big lot in which several other contaminations have been detected, including a duoviri Knidian. *(Not same deposit.)*

① Name occurs in Perry's

MIDDLE STOA BUILDING FILL : C O R C Y R E A N (?)

Seven handles, listed here in numerical order:

- SS 575 (Θ) round same as
 dim. stamp with monogram? probably ~~resembling~~ that of Corinth C 33-99
- 745 (Θ) CΩ, retrograde in round stamp
- 786 (Θ) seven-rayed star, in round stamp
- 1140 (Θ) KP, in rectangular stamp with rounded corners
- 1662 (Θ) O in triangular stamp
- 11825 (ME) ΑΓΑΘΙΝΟΞ, in narrow stamp
- 13059 (K) CO in round stamp

Broad handles with fairly distinct central rib inside and out. The rim where preserved (as on SS 575) lies out on the handle. The inside of the upper handle attachment where preserved (SS 575, 786) shows marked vertical finger impressions. Four of the seven are stamped on or near the lower attachments: SS 745, 1140, 1662, 13059). Clay usually quite fine, usually buff/(greenish or yellowish) but sometimes pink (cf. SS 575, 1140). These features, of shape and clay, are characteristic of the class as a whole.

Dates from other contexts: SS 575, 1662, and 13059 have parallels from Corinth, ~~xx~~ and ~~xxxx~~ many of this class have been found there; it should perhaps be remarked that the context of Corinth C 28-32, parallel for SS 13059, is called "Odeion 1st AD," but the handle need not be so late. The series of jars is known as early as the 6th BC, even marked fragments being known as before 480 (Mary Campbell's frog stamp, ~~xxxxxx~~ with A incuse ~~xxxxxx~~ from Boulterswell; also P 24879 from Gutterstone Well). Stamps with one or two letters occur in the 2nd half of the 4th to early 3rd BC (SS 11553, from N 4th century Hole; SS 3016 from B well at 33/KA; SS 5479 from H well at 68/MB; SS 10048, neck, from NN, Pit at 61-63/NO-E; SS 13913 from Square Bldg Fill; and note the jar P 6395, no stamp preserved, from I cistern at 109/AB, 3rd quarter of 4th.

Beside ΑΓΑΘΙΝΟΞ, the only whole name in this file seems to be ΗΙΣΤΟΞ. Present context is not absolutely tight for this uncommon type, since it comes from a part of MSBF not quite reliable: SS 11826 is a Knidian duoviri handle.

Three handles.

SS 12902 (K) NIK/IOY

779 (Θ) TIMAI/NETOY

11718 (MΣ) monogram combining A, R(?), and T: 

All three of these handles have the characteristic rim with sharp outer edge. The clay is micaceous, buff with ^{taupe} gray core (12902), or red; SS 11718 is blackened on the surface.

Examples of this class have been found in deposits of the early third century and perhaps earlier. There is no present evidence suggesting for these three a date later than the early 2nd. A parallel for SS 779 comes from the fill over the floor of the Square Bldg. (SS 10823).

Not sure of function of person named in SS 12722, because name, with patronymic, stands first, followed by title, and it is not certain the stamp ended below the title.

Grakov dates his Period IV 180-150 B.C. (see p. 138), and his Period VI 122-70 B.C. These dates are puzzling for handles found in MSBF. It is true that in some cases, the Black Sea handle is not the only anomalous piece from a particular fill, but sometimes it is:

SS 11813	Period IV	(SS 1112-11843) <i>Not all same fill</i> In same fill, SS 11826, Knidian of <u>duoviri</u> period.
12073 = 9	VI	In group SS 12054-78, <u>no other anomalous</u> item noted.

Black Sea handles being rare in Athens, we have almost no other context evidence for them. An exception is SS 10901, from the Square Bldg construction fill. The stamp on this places it in Grakov's Period I a, late 4th century B.C. Here the context confirms his dating. The only other of this class found in good context seems to be SS 10866, in ZA ostr. fill, but the reading, hence dating, of this is not clear. In general, there seems to be better evidence for the dating of the beginning of Grakov's ^{seqv} than for the latter part, which apparently is pinned only by devices matching those on coins, and by Persian names. Could all be telescoped to end with conquest by Pharnaces in 183?

30.VIII.55

MIDDLE STOA BUILDING FILL : Z H G R O U P

SS 854, 985, 11671, 11906, all read **IH** with somewhat varying stamps, the last-named having a roughly circular one.

SS 12898 reads just **I** or possibly **H**.

Other types assembled with this group have the two letters with a devise, or with another abbreviation:

 ZH-EYA
 ZHN[-KPATI
 ZH-MO

 ZH-ZQ } Karmi
 ZH-Q

ZHN-~~Q~~IAA ^{St. 53} Hellenistic Which, 250-275?
 ZHNQZ
 ZHNQZ in circle - ? BAKXIDY = archon

Context apart from MSBF: SS 5746 (ZH with cross) comes from ΠΘ, well at

68/MB, (mouth of well?) This well, VG Deposit 34, ~~for the first time~~ has been dated second half of 4th "with intruded 3rd (small sherds)". SAH include good part of earlyish Rhodian jar (ep. ZSXAPHZ), early Rh. handle, APISTO²ANHZ with rosette, Corcyrean(?) AE, and uncertain (SS5841). Jar possibly of 2nd quarter of 3rd?

And SS 255 (ZH-ZQ) comes from A Well at 20/IZT (bronze head well), variously dated 1st half of 3rd by HAT as recently as 1940 publication, and "latter 3rd" by GRE. SAH tend to push it past 250 probably, e.g. Thasian of BOYAHKPITOE (SS139) and some Knidian that may not be so EK. Possibly call it middle third of third century?

Fabric of the group: the shape is sometimes like Early Knidian, sometimes thick and arched like early Rhodian, not the earliest. Note SS 6966 (ZH) with section of Rhodian rim. On the other hand, SS 8329 and 11671 have something like a fat heavy early Knidian rim. (Both also ZH) The clay could often be taken for Knidian, but in some of the "Rhodian" handles it is quite Chian: see SS 6966 again, which has fine red clay, gray core, and a thin smeary light slip on a dark surface. A few other handles noticed as having ZH fabric may be second handles on ZH jars: cf. SS 70 and 7634 stamped with ligature **SHH** which are "Rhodian" ZH shape, and others with about the same stamp which have been filed as EK.

Date of Zenon of Caunus ca. mid-third? (SEHHW p.358, letter of 254 cited).

SS 12705 (K): fragment showing angle of shoulder of jar and upper(?) handle attachment just below(?) the angle, stamped C S in circle. Hard dark red clay with white bits. White slip, rather thick and greenish.

For the shape, cf. P 9398 (Y, cistern at 20/MB, to beginning of 2nd BC according to SAH - VG dep.41), but the slope above the angle in the fragment is too steep; cf. also the torpedo jars of the ~~early~~ late 2nd - early 1st B.C., but they have no angles. We lack comparative material.

Note that SS 12705 comes from a part of the deposit that is described on its SS card (in LT's hand?) as "prob.dist." It is from the big group ~~12635-~~ ¹²⁶³⁷ ~~12729~~ ¹²⁹¹⁹ in which there are several items that are too late, including a ~~duoviri~~ handle. *was also a Ponting "Period VI."*

My recollection that ELW could not match early 2nd BC for a Latin stamp. But possibly they began them earlier in some of these Phoenician or whatnot ports.
