

VRG_Folder_0034

DEPOSITS III A

Mid 2nd - ca. 108 B.C., ^{to end of} Period I

Lists in here are rather long, ca mid 2nd.
But they end with HAT GROUP E.

Stos of Attalos following has been relogged to
folder II B, with the present idea that it may
end about 157 B.C., as suggested in Hesp.,
1985.

This folder III A, should start with lists from
Corinth, ^{as largely of before 146} Analyses of the Rhodian and Ruder
catalogues in Corinth by November 1950 follow
here. There are some numerical lists of minor
groups, but I don't find analyses (with names,
etc.). This came out because I wanted to
see what Kran had been found in Corinth, in
following ^{some} whitt. Kran had been stamped right
^{-sent} down from 3rd BC to 1st. If there are
analyses of minor groups found in Corinth, I
have not yet found them.

In any case, now we need something, more
up to date, concerning finds up to date.

Perhaps the computer can do this? Ask
Maggie. Sent photograph of page of the Rh. analyses

The following devices appear in stamps without names:

cluster	Co 430
fish	104
rose	56

Of these, Co 104 is possibly an imitation Rhodian, since it is of 2nd century shape, not late, but the clay is fired with a grey core. The other two are late angular, and possibly postdate the founding of the colony.

NOT READ

The following Rhodian handles have stamps on which no name has been restored and no device identified: Co 56, 146, 225, 248, 300, 433.

The above is an analysis of the stamps on the 9 handles so far found in Corinth which actually name duoviri. As may be seen, they name altogether 6 pairs, contemporaries of the eponyms listed parallel to them in the preceding column. For the stamp naming Laches-Eupolemos the companion type has not been identified, but the eponym was undoubtedly Euphragoras, as known from the stamps of other potters of the period. (Names in parentheses in these lists are those which appeared on the companion stamps on the other handles of the jars.) To these 9 handles (Co 3, 24, 68, 131, 132, 185, 255, 339, 371), add 6 (Co 27, 32, 37, 160, 164, 346) which bear companion types to duoviri stamps: see eponym list under Aristainos, Dionysios, Euphragoras, Sosiphras. These 6 add three new pairs, 3 new eponyms, presumably, 3 additional years. We have therefore from Corinth 15 handles datable in 9 different years of this period of ca 100 !

D. Three persons of unidentified function

fabricant, etc.	device	eponym, etc.	Co	shape, etc.

ΜΕΡΣΗ ?				
ΑΙΘΑΛΑΣΗ (				

The interpretation of the two types of which an analysis has been attempted is obscure, and I am not really sure of the function of any of the five persons named save Skirtos, who is a potter, or pottery commissioner (certainly not an eponym or duovir).

F. Unrestored Knidian handles

No name or device has been made out on the stamps - all rectangular - of Co 35, 277, 309, 379, 422.

Olbia cistern

For text and translation of E. Levi's article of 1964; also a folder with notes, analyses, comment, see

BLACK SEA AREA

USSR - LEVI

In the folder with comment etc., are other copies of the analyzed lists of Rhodin and non-Rhodin from the deposits, of which originals are here attached; as to original, some annotation.

Date: see p. 2 of typescript of 9.II.71 on the non-Rhodin; see also several pages by Fred Winter on the pottery from the deposits. Latest seem to be ca mid 2nd, of pots as well as stamps. Proportionately $\frac{1}{4}$ of 2nd.

J, K, etc.: see typical index
 autograph G-L, dated 11.8.68

On the date of the Olbia cistern deposit

For the author's comment on the dating of this group, see summary, her pages Rhodian, she says, 259-260. On SAH: mostly 220-180, and less than 10 others down to 146 B.C.; Grace dates ΑΡΙΣΤΟΜΑΧΟΣ after mid-2nd. Knidian, ca. 200 B.C. Koan, 3rd and 2nd. Sinope tiles 3rd cent. and 3 stamped handles are 2/2 of 2nd. On other pottery: preponderantly ~~2/2~~ 3rd and 1/2 of 2nd, comparing with HAT's groups. She does find some parallel with Group D. "Only the group of brown-lacquer saucers is closest of all to the ceramics of the latest Athenian cistern, E, and thus, following the Thompson dating should be . . ." end of 2nd and beginning of 1st B.C. Seven coins, of which 4 can be identified and dated: 2 of the 3rd century, 1 of 220-200, 1 of the mid-3rd B.C. She dates the filling, on the above evidence, "probably in the 30's or 20's" of the 2nd century; putting it after mid 2nd seems to be due to the one Rhodian and the 3 Sinopean, and the "brown-lacquer saucers" like those in Group E. On these latter, though HAT - see notes above - would bring them down to the 1st B.C., she considers that this group in Olbia brings ^{the saucers of Group E} ~~them~~ back into the 2nd century.

My letter of 19.VIII.68 to the author - never acknowledged, it asked for lots of photos - notes that the SAH seem to me not later than the mid-2nd. The Rh. ^{ep.} ΑΡΙΣΤΟΜΑΧΟΣ is seen by a corrected die to have preceded ΗΡΑΓΟΡΑΣ whose name has been found at Carthage. The Rh. ep. ^{now seen to be} ΑΣΤΥΜΗΔΗΣ is ^{i.e. there are those two;} either 3rd cent. or a little after 146, but in fact the reading of the single ex. (no.76) is not sure. The Sinopean of Grakov's VI does not put the date after mid 2nd for me as I believe ^{probably} they all finished in 183 B.C.

See note on the Olbia deposit in Delos 27, p. 382: SAH seem to be little if any later than mid 2nd.

See also Delos 27, under E 37, for the dates of the two eponyms ΑΡΙΣΤΟΜΑΧΟΣ, of which one certainly is before mid 2nd (as above) but the other is VI. There are 5 pairs listed with each of these two. I seem to have been oblivious of the second A. when I wrote in VIII.68 to Mme. Levi. I think from their photos of her stamps that they are of the earlier A., but one could not prove it easily. However the later A. would be rather too late even for her 30's and 20's of the 2nd century, by his pairs.

(made 12.X.68)

A count of Rhodian eponym handles in the Olbia cistern by date-group, comes out like this:

J (MSBF and not earlier)	126	minus	86	leaves	40
K (Pergamon and not MSBF, only 7 years)	36	plus	86	makes	122
L (post-Perg., pre-146 - i.e. Per.IV)	3				<u>3</u>
					165

Since a majority of the handles of the MSBF period are seen to be of the latter part of this (types naming ΘΕΑΙΑΗΤΟΣ, ΝΙΚΑΣΑΓΟΡΑΣ, and others), I add these up and find 86 that are apparently post-200 B.C. (probably there are more) although still of MSBF date; add these to the K handles, and find 122 of the first quarter of the 2nd century, or about 74 per cent of the total legible Rh. ep. handles (165). Of Period IV, only 3, and none I would believe to be later. (The handle ~~of~~ supposed to name ΑΣΤΥΜΗΔΗΣ has not been counted.)

Today I have looked through the fabricants, and without counting I can see they with a few "IV" or "IV-V". are largely III or III-IV, Here too, nothing could be called, necessarily post mid-2nd. There are a few early fab.s: ΑΡΙΣΤΟΝΙΚΟΣ with cornucopia, ΜΟΞΧΟΣ, ΕΣΚΡΑΤΗΣ with month; the first two were noticed by Levi. Among the fabs. is also an early ep. probably: ΑΓΗΣΙΝΗΙΟΣ with sun.

The Knidian are similarly dated, see analysis above; of 8 handles with eponym names, ⁶ 7 are dated in III or earliest IV (i.e. probably first 2 decades of 2nd century) while a seventh is 188-167 and the eighth is 167-146. Stamps without eponym names are probably of the same dates. Unfortunately no illustrations are given of stamps the author found illegible. The items marked "III" are probably late III, as dated in term of ΗΟΑΙΟΥΧΟΣ, most numerous Kn. ep. in MSBF.

Of the Koan, 395 and 398 are matched in the MSBF; many examples of these types are there. The other two have no good context except this group, and may probably be dated now 1/2 of 2nd century because of being in it.

On the Sinopean, see above, bottom of p. 2. Grakov's two later groups should
latish
be ~~late~~ 3rd - early 2nd, if they are to end in 183. Interesting that the tile fragments are much earlier - did they come from the repaired part of Brashinski's roof?

On the whole, the only thing that might perhaps bring it down past 146 B.C. would be the "brown lacquer saucers". These should be scrutinised in Levi's publication and in the translation of the various parts, trying to get figure-references for the "brown lacquer saucers" of Wells' translation of the summary pp.259-260, through the different terms in Frel's translation of the section on pottery (in French, and I am not sure how complete).^m ^{These pieces} ~~They~~ should be compared knowledgeably with their alleged parallels in HAT Group E. If they really have to be contemporary, then the cistern group has to go down well into the 2/2 of the 2nd century, as Levi says; for this stuff, she has moved Group E into the 2nd century, but I can't have it before the last quarter.

GRE F511

GRE in Heup. 1957, p. 335, note 51, refers to

the filling of this cistern, but only to bottom layers (in which no SAH as dating ca 250 B.C. before account of IV? 56)

Date recently proposed by GRE for Layers 3 and 5, before 175 B.C.

	fabricant	device	eponym	KT	SS	GRE Layer (6.vii.61)
Knidian	APIETANAPOT	oar	EYPAΓOPAZ	197	7717	III
	APIETOKAHZ			233	7673a,b	V
	APIETOKAHZ			234	7677	V
	AOEAIOT	double axe		498	7675	V
	APAKON		OEAIOTOT	523	7679a, b [⊗] 7715 [⊗]	V III

	MIKYOOZ	branch		month IAN.	7716	III
		rose	IEP.AΓHEIHTIOZ	II(D)	7712	III o retr.
		Helios symbol	EYKAHZ	II(D,E)	7678	V
Thasian	TOPTOZ ("TOPTOZ")	ladle	NIKON	I(C)	7662	V
					7663	V

The Rhodian are all datable in the early 3rd B.C.

On the Knidian: all the fabricants were active before the middle of the 2nd century

(as marked by Corinth and SA cstr. fill); the terms of three of the eponyms are known to have fallen before this middle, they being ΔIOΓENHZ, EPMOKPATHZ, and OEYAOZIOZ, while a fourth, ΔION, may also belong there; the other 3, EYPAΓOPAZ, EYKPATON, and MENITHIOZ, seem slightly later, but close, according to name connections, and I should suppose they date early in the third quarter of the 2nd. The whole lot is in any case definitely later than the Knidian in the MSBF - none of the eponym names appear there, and the only overlap of fabricants is KAEON, who may not be the same person, and APIETOKAHZ, ditto. (The types of AP. here, KT 233, 234, are those dated in the terms of phrourarchoi, who may be datable 188-166 B.C.)(which would suit GRE's book).

The Thasian is apparently contemporary with the Knidian.

⊗ MZ notes SS 7715 joins SS 7679 b, so that we have a join between Layers

⊗ Hannon was seen in the SA cstr. fill.

⊗ KT 59 an un. of Corinth (626), also EYPAΓOPAZ as in

STAMPS FROM AA CISTERN AT 99/K

called early 2nd B.C., contemporary with HAT Group C

THASIAN

ΠΟΡΓΟΣ	ladle			7663 L.V
--------	-------	--	--	----------

Note that the Rhodian all belong to the early third century; the group includes no pairs but is consistent in period. The Thasian handle probably goes with ^{the Knidian} them: fabric and rim and handle profile resemble the early ^{second} ~~third~~ century examples in the ~~Samples cabinet~~. ^{Annex 4-5 p. no. 4570.}

Most of the Knidian might go in the early second, but I should have put 7717 and 7664 in the second half of the century.

In this column, GRE counts 7717? 524

See description of Bottom Fill on pp. 3122-3123 of HQ vo. XVI. Pottery descr. as like that of (D 11 : 3) and (D 12 : 2), "late Hell. running well down into 1st B.C. if not through it" but containing also much earlier Hell.

The Knidian stamps are probably all before 146 B.C. and greater part before 166 B.C.; with the one exception of SS 5306 of the duoviri period, datable early 1st B.C.

Note the cistern is not listed at all in Agora V (Roman prob.), VI (Roman Plate Pot.) or VII (Roman lamps). The bottom fill is described in IV (Howland) p. 236, as late 2nd - early 1st, same filling as that of D 12 : 2. (Probably late 1st lamps also have 1/2 2nd.)

is one.

On the well, see Hesperia VIII, 1939, pp.238-9 (T.L.S., Annual Report, on Female Herm and ivory sword hilt); Hesperia, XIV, 1945, p.311, under nos. 114-6 (Angel, on bones); Suppl.VIII, 1949, p.186, no.8, and p.188, no.10 (SS 8214, and its stamp, wrongly read, by VG). In all these, the date originally assigned to this well, 86 B.C., is quoted; but subsequent studies by GRE and VG have put it back to about the middle of the 2nd century. GRE calls it 2nd quarter. All the Knidian eponyms save EYΦAΓOPAZ are apparently phrourarchoi, i.e. presumably to be dated 188-167 B.C. EYΦAΓOPAZ is a little later; has not been found at Corinth or in the Stoa of Attalos filling, is perhaps a year or two after the middle of the century, but not far, because of name connections. For SS 8217, we have no proof to date it before the 3rd quarter of the 2nd, but it could well be 2nd quarter. The Koan amphora is at least as early as the 2nd quarter.

Of the discarded SS 7793-4 (see above), 7793 is 3rd quarter of 2nd, and Knidian, while 7794 seems to be an early Rhodian, late 4th century.

⊗ Co 26 has now been identified - as an example of KT 281, w. f. E. 3 of 1955

Another Bone Well, but in Berenice (Benghazi) and dating in the 3rd cent. after Christ, is mentioned by J.A.Lloyd in North African Newsletter 2, ed. by J. H. Humphrey, see AJA 84, 1980, p. 81. Excerpt follows:

"Perhaps the most important civic buildings stood in a separate block occupying the highest point of the site. The rich mosaic, marble and painted fittings [of Building W] are dated to the early 3rd c. That same period, curiously enough, also saw the beginning of the desertion of this sector of the city. The finest of the peristyle houses was abandoned at this time and one of its cisterns used for corpses, mainly of young babies. Wholesale abandonment, however, did not occur until the middle of the century. A defensive wall was then hastily constructed." (etc.)

VG

The rich mosaic, marble and painted fittings [of Building W] are dated to the early 3rd c. That same period, curiously enough, also saw the beginning of the desertion of this sector of the city. The finest of the peristyle houses was abandoned at this time and one of its cisterns used for corpses, mainly of young babies. Wholesale abandonment, however, did not occur until the middle of the century. A defensive wall was then hastily constructed." (etc.)

A 3rd cent. B.C. cistern and an unfinished rectangular cutting of which destroyed some of its upper part the 2nd century B.C. Before either of these were discovered, the deposit was called a Hellenistic fill, but seemed to be continuous into the cistern. Coins suggest fill became earlier toward the bottom of the cistern: those found May 7, 9, 10, though mostly of the 3rd cent., included one of Delos, Athenian cleruchy after 166 B.C., and one of Athens New Style ca. 172; those found May 11, 13, include nothing later than 229-30 B.C.; those found May 14, 15, 17, include nothing later than 255-229 B.C. (v/17/40, no. 4). Knidian, Thasian, miscellaneous, and the Rhodian 9542 were found May 7-10; the rest of the Rhodian May 14, 15.

PARIAN	the ethnic with omega (as in beta KSBF Parian)			10084

10082-3

To depth - 0.90 m : SS ~~10082-3~~, Knidian, datable probably early in the 3rd quarter of 2nd

To depth - 2.75 m : SS 10084, Parian; 10085, Rhodian; 10086-7, Knidian. The Rhodian eponym appears on two handles found in Carthage, destroyed 146, and on one from Tarsos from a "mid second century" context; the fabric of SS 10085 is consistent with a date late in the 2nd quarter; note it is a fractional handle. The Knidian seem to be of about mid 2nd according to name connections. A somewhat similar Parian stamp has been found in Corinth.

To depth 5.70 m : SS 10088, from the same die as an example found in Corinth, hence likely to be from before 146.

The whole group may be dated within a few years of 150 BC.

Study made from the SS cards, without getting out handles save Parian and Rhodian, and without investigation of context.

18.XI.58

L.T. calls my attention to the fact that L 4272, found at -2.90 to -5.70, belongs to Howland Type 37B, of "late 2nd century into 2nd quarter of 1st c. B.C." (All the handles save SS 10088 were found higher than this, while SS 10088 was at the same level.) This fact will be taken into consideration in using this deposit as context evidence. Handles bearing the names of most of the Knidian eponyms and

fabricants have been found in Stoa of Attalos filling or in Corinth. This includes ΧΑΡΜΟΚΡΑΤΗΣ but not ΕΥΦΡΑΓΟΡΑΣ of SS 10083, and it seems that the eponym is a little past the middle; he appears in AA cistern at 99/K, III, cistern at 12/AH, and the floor of S.Stoa II. (The type KT 418 (SS 10086) will have more study: an eponym ΑΠΟΛΛΩΝΙΑΔΑΣ is well established in the 1st half of the 2nd c., but possibly there was a second, and there are many persons named ΔΙΟΝΥΣΙΟΣ.)

In short, the SAH still seem to me to date little after the middle of the 2nd c. but I am glad to know about the lamp.

origin

Roman amphora, not stamped, P 25797

6.11.81 ΠΠ 1099, SS 14142,
is too early for the neck, except for
SS 14153 perhaps. Note it is not
listed n.b. p. 2625, and when
it is first recorded, in ΠΠ XIII under
ΠΠ 1099, the entry seems somehow filled in.
If it does come from this general deposit, is it
separate from the rest? Cf. a photo, in about
p. 2309, of 2 jars apart from the rest.

Of the eponyms, ΑΡΙΣΤΟΚΛΗΣ and ΜΕΝΙΠΠΙΟΣ appear in Stoa of Attalos construction fill, ΦΙΛΙΠΠΙΟΣ in this same type (KT 193) has been found in Corinth, and ΚΑΕΥΜΒΡΟΤΟΣ is dated both by the Stoa cstr. and by the destruction of Corinth. ΦΙΛΑΤΙΑΣ is known only in this type, in very few examples, but is to be dated by the title phourarchos presumably to 188-166 B.C. The fabricants ΔΟΞΑΙΟΣ and ΚΑΕΥΗΘΑΙΣ with double axe have both been found in Corinth. The eponym ΕΥΦΡΑΓΟΡΑΣ has not been found as yet in Corinth, nor in Stoa of A. cstr. fill, but in other contexts which, with the connection of names known with ΕΥΦ., make clear the term fell not later than shortly after the destruction of Corinth. Which does for the deposit as a whole. The date seemed a bit early to ELW for the Roman jar, but there is no evidence against it and she accepts it.

(X) 9.81.59 It now has been found with new ident. of Co 26 as no. 9
KT 281.

12.VT.57 The note
books revision of the grid
position is 10 / AH throughout

ΠΠ, cistern at 12/ΛΗ acc. 5 LT. Grid no. B 16:1
 (formerly called 6/ΛΗ by excavation, and sometimes
 corrected to 10/ΛΗ) (in notebooks) (From grid no. A 16:2)

A ~~temporary~~ provisional period analysis was made of this when the pit was being excavated, which was done partly by Alan Borgohold and partly by E.V. when Alan was in Germany (?). This dual responsibility of excavation resulted in the fragments coming in two lots, so that I had to decide to throw away the body of a ^{knife} jar because it had no top, and a few days after it had gone down the well in the Skala House, another lot of fragments turned up, including a pair of handles ^{SS 14145} which may very probably have come from that jar, stamp types for which we would make like the whole jar shape.

Account of the ^{cistern} ~~area~~, with picture of jar as found, ΠΠ pp. 2305-2310; then in ^{plan and} section drawings p. 2309 it may be seen how much of the fill was left undug, because of danger of collapse. This undug part may also account for pieces missing, though not those with fresh breaks, presumably.

ΠΠ p. 2625 lists objects. It appears that at least one item is omitted, ΠΠ 1099, SS 14142; what about anything else? The ΠΠ vol. (ΠΠ, ^{and last} ~~pp. 1099~~) which should have ^{at least} finds cannot at the moment be located.

Dept. of (hoped-for) consistency

To V.R.G.

Please see your notes on this cistern: A 18:1 (NN, 77/VA)

Note that Upper fill (Fill 1) where you list handles as second and third quarters of 2nd c. B.C. is however context of early 1st c. A.D.: as shown by lamps + pots; so listed in nb. + so cited in JP ms.

In Suppl. X, however, under nos. 132 + 151, you cite handles from this fill as "from a cistern group datable apparently in the second and third quarters of the 2nd century."

Something here that I don't understand?

(Lower fill, 3rd c. B.C., quoted by ARE as 3rd century by V.R.G. as possibly later; is quoted in Howland ms as simply 3rd c.)

A 18:1

ΧΑΡΜΟΚΡΑΤΗΞ	double axe	ΔΙΑΟΜΒΟΤΙΑΔΞ	1278	9910 [9916]	listed in Fill 3

Note of IV or V.56 by GRE separates these handles from six others attributed to Fill 3 (bottom) from the same cistern. Fill 3 he suggests dates not later than 3rd century, probably 3rd quarter. No suggestion yet as to Fill 1.

The SAH are a close group. Note there are two, maybe three, (non-joining) pairs: KT 987, 1120, 1278, the fabric suggesting the pairs are from the same jar. They date near the middle of the ^{second} century, according to finds in Corinth, Carthage, and Stoa of Attalos (XX) fill: that is, types dated by the eponyms ΘΕΥΔΟΤΟΞ and ΑΜΥΝΤΑΞ have been found in such fills; types endorsed by all the fabricants ^{save ΑΝΑΓΓΑΝΔΡΟΞ} (with (dated by other eponyms) have been found in such fills; and ~~types~~ of other fabricants ~~dated~~ who work in the terms of the eponyms listed here also work early enough so that some of their stamps are found in such fills. None of the fabricant names occur in the Middle Stoa Bldg. Fill; of the eponym names, ΕΥΚΡΑΤΗΞ and ΔΙΑΙΝΗΘΞ do occur, but they are clearly those of other persons from those listed here, being associated with with a different set of fabricant names.

						7603	MSBFo

Hesperia, Suppl.IV (Tholos; 1940), p.120: "The stamped amphora handles include a few of the third and early second centuries before Christ, but most of them are of the late second and early first century before Christ."

I seem to have no earlier record (than the present) of having worked on this deposit, but at any rate the above quotation does not represent my present opinion on the handles listed here. (List is that in the Deposit List.)

The Rhodian are ca. mid third to early second, the latest being SS 7945 of AΠΙΣΤΑΡΧΟΣ (MSBF, 10; Pergamon dep., 20).

The Knidian are second century to third quarter, the great majority being probably of the third quarter.

The Koan, and SS 7603 of the Unkn.Or., have parallels in the MSBF, hence date with the Rhodian, old stuff.

Construction filling of Hell. Metroon

In connection with SS 2677, w. Kn. ep. 'Apo^osis'lys (in KT 6), I asked HAT yesterday if he could refer me to a relevant part of his West Sid. Bldgs article, Hesp. VI, 1937, which would present the ^{published} ~~first~~ ^{plan} content of this SS 2677, said to come from "Metroon Pit 2, footing trench for N-S crosswall (Perist. IV)"

He said Perist. IV is that of the Hell. Metroon, and that the wall mentioned is a part of the Hell. Metroon. The last Hesp. VI, pgs. 194-5 dates this str., in the 3/4 of the 2nd cent. A long-petalled Meg. bowl is added, P 3661, ^{also at H. L.} SS 5527.

He said architecturally the Hell. Metroon is close to the Str. of Alidos (under which no long-petalled found), as it must be not too long after Str. of Alidos.

SS 2677

[Eni 'Apo^osis'lys][A^oθivou]K^ovidew bu

So, again as from
pre-146 date for this

Note that all items in this packing behind the tiles are Knidian, and all are whole or fragmentary jars, not loose handles.

The date of the group as a whole seems to be just before that of ΠΘ, Cistern at 6/NE. All the eponyms in the present group appear in the ΠΘ group, also most of the fabricants. The present group lacks stamps naming ΙΝΙΑΡΧΟΣ and ΣΩΣΙΦΩΝ, the early duoviri-period eponyms present in the ΠΘ group; it lacks also ΙΕΡΟΚΛΗΣ, present in the ΠΘ group and commonest eponym of handles in Group E.

Note that ΑΠΟΛΛΟΔΩΡΟΣ is dated in the 3rd quarter by the contexts of SS 5527 and of Tarsus handle no.98. ΤΙΜΑΣΙΚΡΑΤΗΣ is one of the latest of the pre-duoviri eponyms: see Pnyx p.155, under no.143.

Probably to early last quarter. of 2nd B.C.

20. IV. 67 The Defaced List (in the cat. vol.) includes no other finds in the context, fill, and does not (thus) question my date.

Deposits discussed with S. Retroff

A-B 19-20 : 1.

(Just Drin South)

mostly 3/4 2nd

To S. Retroff I had said (19.III.74), look at my long analysis in the Deposits Summaries, headed "mostly 3/4 of ~~the~~ 2nd B.C." Included are two later Knidian stamps: SS 9193, dated in the term of ~~ΣΣΕΙΛΡΩΝ~~^{ΣΣΕΙΛΡΩΝ}, close to 108 B.C. (cf. Delos 27, p. 332, under E 88); and SS 10170, dated in the term of ~~ANAPOMENHZ~~^E, close to 88 B.C. (ibid., pp. 346-7, under ~~xxx~~ 166). The relative position of ANAPOMENHZ close to the destruction on Delos by Mithradates in 88, and of Athens by Sulla in 86, is shown by the grid of fabricant - eponym name-connections referred to, ibid. p. 321. SS 10170 brings the latest part of the deposit down to about 90 B.C., unless one discards SS 10170 from the group.

Apart from the two, SS 9193 and 10170, the SAH from this deposit are third quarter of 2nd century (probably the majority of the Knidian), and earlier, including about 50 Rhodian of the ^{second half of the} 3rd century and Thasian of the 3rd and ^(a few) 4th centuries.

⊗ EIM's statement is about what I would say. The presence of earlier material in the same deposit does not of course affect the post-100 date of SS 10170. F. Kleiner's 7 bronze coins ("deposited ca. 120" go pretty well with the latest ~~group~~^{group} sizable group of Knidian, probably ca. 3/4 of 2nd. As context for other-wise ~~an~~ ^{down} unplaced SAH in this deposit, I think of it as dating mostly to the 3/4 of the 2nd century.

⊗ As quoted by S. Retroff: "Will: filled up probably shortly ~~before~~ after 86 B.C. but containing much material of 4th - 2nd B.C., especially 3rd quarter of 2nd century."

V.G.

NN, Great Drain South

A-B 19-20 : 1

SUMMARY ON SAH

Thasian	16	of which 2 probably before 340 B.C. (SS 9125, 9798) and the rest latter 4th and 3rd c B.C. Note that 5 are still illegible.
Rhodian	53	of which the majority are 3rd cent., but 4 are probably all post-MSBF: AINEAZ EPTOZT. (SS 9163) 203-202 BC ΔΙΟΞ w. cluster(?) (SS 10116) late 2nd (comb. w. FOTS) 176 BC ep. ΑΡΕΣΤΡΑΤΟΣ (SS 9176) - occurs in Perg.dep., not MSBF, hence toward 180 B.C. ΑΡΑΤΟΔΑΝΗΣ (SS 8998), ca. mid 2nd B.C. 2
Chian	2	3rd cent., perhaps ca. middle (fab.)
Coan	1	
Corcyrean(?)	1	may be 4th c. + 1
Parian	1	type with <u>omega</u> , cursive 2nd BC?
Pontic	3	2 Sinope class, believed by VG, and some Russians, all to predate 183 B.C.; 1 <u>Chios</u> group IV, 180-100 BC
Parmeniskos Group	4	3rd - early 2nd B.C. probably SS 10138 paralleled in MSBF SS 10125 " " post-MSBF Kappa Hell. fill (SS 13428)
Latin	2	Both read MAARCI; inquiry out to ELW whether this may be 2nd B.C. ? ELW, 5.11.58: "they seem to be good examples of Type 4 (Sestini-type), and undoubtedly date 2nd century 1st BC. For the stamped examples of the type, the earliest seems to me to point to the early 1st BC or 1st 1/4 of 1st" 5
Knidian	44	MSBF period 18 later 1st half of 2nd B.C. 18 may be as late as the 3rd quarter 2nd 19 <u>duoviri</u> period (SS 9193, late 2nd, SS 10170, later) 2 44
unclassified	7	seem to be Hellenistic, some possibly earlier, none believed to be later than say 3rd quarter 2nd

With the exception of the 2 Knidian duoviri period handles, SS 9193 and SS 10170, and perhaps the 2 Latin stamps, this group of handles suggests a deposit of the third quarter of the 2nd century B.C. containing considerable old dump. The small number of 2nd century Rhodian is characteristic, the import having dropped off during the first half of the century.

Comment on SAH

"From the same levels as the objects in the Period of Use Fill": SS 4166-72, 4264. Of these, SS 4166-70 seem to be datable in the second quarter of the second century to perhaps shortly after the middle of the century (SS 4168); SS 4264 may be somewhat later, still in the 2nd century.

SAH from the Abandonment filling as listed by GRE include two large fragments of the duoviti period, SS 3679 and SS 3680, which I think are at the end of that period. of the Knidian handles
The rest, from that fill include about 18 datable about 2nd quarter to mid 2nd, and about 30 datable ~~about~~ second half of 2nd. The non-Knidian (see top of page) do not help much in the dating, on present knowledge. [No Koan.]

V

⊗ Not late - no earlier duoviti.

8.V.56 Date guesses of individual types have been entered on type cards.

28.8.74 See table, p. 3: IVA, 3; IVB, 11; V, 39; VI, 2 (Date perhaps not all right)

Also ss 2250 with boukranion in framed circular stamp, SS 2158 with forepart of lion, not read but possibly both of maker Damokrates.

Citation for P 3402

Most likely resembles type of Κόσμος, term of Ιεροκλής. Summary stamp

5. IV. 62 Fering does not suggest 2250 and 2159 are from same place

An eponym Hierokles, an eponym Kleumbrotos, occur on handles in Corinth. An eponym Kleumbrotos also in OE cistern, which the Group E stamp occurs in the early 2nd ant. part from ΔΔ at 113/A' (SS 95.59) Difficult

An Epiphanes works under Sosiphanes, perhaps the 1st year of the division. No other pub. counts with period of division. Oh yes - Κόσμος

Compared with Wall 9: the stamp of Charmokrates under Eukrates occurs in both; another stamp of Charmokrates in Wall 9, also others of Anaxandros with club, and of an Epiphanes. Damokrates son of Arist.

General character: no Rhodian, or earliest Kindian (such as is found with Rhodian in Hellenistic fills in Θ etc.). The boukranion stamps are framed circles, both probably of "Damokrates son of Aristokles", stamps of whose father(?) were found in Corinth. No stamps with forepart of lion. No stamps with pairs of magistrates.

Spongers: ΑΡΙΣΤΟΚΛΗΣ, ΕΥΚΡΑΤΗΣ, ΙΕΡΟΚΛΗΣ (4), ΚΑΛΛΙΔΑΜΑΣ (2 or 3?), ΚΛΕΥΜΒΡΟΤΟΣ

DEPOSITS - III GROUP E

Athens, May 3, 1963

Dear Dorothy,

Lots of people have been much disappointed at the delay in your arrival, but it is nice to think you will be here this month.

I found among my papers when I got back the enclosed chit of inquiry on Group E, M 18 : 2, and N 19 : 1. I am not sure whether this has been the winter during which you wished to consult on these deposits, or whether even we may already have discussed them. Anyhow, here are some notes.

Group E: I do still think that the handles from this deposit antedate 86 B.C., in fact that they are probably before 110 B.C. since they include none of the approximately 23 yearly Knidian officials of the duoviri period. See Supplement X, pp.146-150. of eponyms
These are a group closely knit by interconnection between eponym and fabricant names, the fact that they occur dated by ~~appearance~~ in such Sulla-destruction deposits as M 20 : 1, on which see for instance Hesperia XVIII, 1949, p.110, note 8; this latter deposit includes the eponyms ANAPOMENHE and EPMSN who seem to be among the latest of the duoviri period. Group E has no duoviri eponyms, but two of its potters, EIIICANHE with bee and KYTIPOZ with forepart of lion, do last over into the duoviri period; in Group E they both name IEPOKAHE, the predominant and evidently latest eponym in E; so we may suppose that the handles from this deposit come down into the last quarter of the 2nd century, as does the inscription I 1594, see Hesperia III, p.394.

(See notes on M 20:1)
I should remark that in III.62 GRE was not able to see a distinction in date between Group E and M 20 : 1 above-mentioned, at least in the brief study of the two laid-out groups for which there was time; he said that in several shape-series "the most exaggerated pieces of Group E and (M 20 : 1) are of a contemporary stage showing an appreciable advance over those from Group D." He thought it likely that both Group E and M 20 : 1 "were deposited close to the time of Sulla, i.e. soon after his destruction." (This does not mean that he has identified any of the contents as post-Sullan, but just that it ^{would} stand to reason that it must have been afterwards that they swept up.) Do not of course quote GRE without verification with him. (End, on Gp. E.)

DEPOSITS: IIIA (MID 2nd - ca. 108 BC, i.e. PERIOD V CORINTH)
