NOTES ON M 20 : 1 (X, cistern at 75/OA), MIDDLE FILL

Publication references:

On measures (P 8952, P 14330, 14331) and weights (IL 514, 516, not illustrated), see M. Crosby, "An Athenian Fruit Measure," Hesperia XVIII, 1949, pp.108-113 and pl.5. On the deposit itself, see *ibid.* p.110, note 8.

On the Roman amphora SS 6814, see E.L.Will, "Les Amphores de Sestius," Rev.Arch. Dijon, de l'est et de centre-est, VII, 1956, pp.238-239, with fig.83.

For another example of the Latin stamp on SS 6807, see Excavations at Nessana, Vol.I, 1962?, about p.130, under no.37, where it is dated by ELW in the first quarter of the 1st cent. B.C.

On the Punic jars, SS 6815 and P 8946, see VG, "The Canaanite Jar," The Aegean and the Near East, etc. (1956), pl.XII, 4,7,8, and fig.6, nos. 6,7^(p.29) and pp.95-6, 100, 109.

Some of the Knidian handles from M 20 : 1 are cited in VG, Hesp. Suppl. X (Phyx), (1956) to under nos. 176, 184, 185, 187, on pp.162 and 164. The chronological group from which the Knidian handles from this deposit belong is discussed *ibid.* pp. 147-150; see further, below, VG comment on the deposit.

On the lamp L 3644, see R.H.Howland, Agora IV (1958), p.120, no.498 (Type 37 B), pls. 18, 44. See *ibid.* p.242 for a listing of the deposit.

Comment by GRE, III, 62, after a brief study of the cistern group laid out on the shelves, immediately after prolonged and concentrated attention to Mummian groups in Corinth, follows here. He discusses relative dates of HAT Groups D and E and of M 20 : 1: " . . . likely that Group D was deposited close to the middle of the 2nd century, and that both Group E and the Chi cistern [M 20 : 1] were deposited close to the time of Sulla, i.e. soon after his destruction.

"The relative placing of the three groups with respect to time of deposit is based on comparison of several shape series common to the three. In these series the ~~most exaggerated~~

most exaggerated pieces of Group E and the Chi cistern are of a contemporary stage showing an appreciable advance over those from Group D.

"The absolute date for Group D is suggested, in addition to HAT's ideas, by many points of contact with material from the Mithraean destruction debris in Corinth. The absolute dates for Group E and the Chi cistern are suggested by a combination of the indications from both, the former outlined by HAT, the latter already remarked in my note of Dec.27, 1961. [Roof tile and stucco fragments, measure stamp connected with late 2nd B.C. decree.]

.

"It seems quite possible that Group E has a longer range in time than had been supposed, since you feel its handles are appreciably earlier than the time of Sulla."

He notes that M 20 : 1, in comparison with Grp. E, "probably is a group more closely contemporary as a whole with the time of Sulla," and that as an exhibit on the study shelves it supplements Group E.

Present comment of VG (of the old - pre-war - comment on the old listing). See attached analytical list; round brackets in this restore stamps that were on the other handles of jars of which only one handle was found in the cistern.

The Knidian all belong to the period, of apparently about 23 years, when a pair of "andres" or duoviri were named on Knidian amphoras, cf. Hesp. Suppl. X, pp.147-150. In contrast however to the Knidian in the Kybele cistern (see VG notes with Deposit List of E 14 : 3), those from M 20 : 1 are spread out over the period as a whole. Six handles dated in the terms of ΔΑΜΟΚΡΙΤΟΣ and ΙΛΙΑΡΧΟΣ - at least a third of the Knidian - must belong to the beginning of the period, i.e. before 100 B.C., if its end is 86 or 88 B.C., since potters lasting over from the pre-duoviri period name these eponyms. Two of these potters, ΕΠΙΘΑΝΗΣ (with bee) and ΚΥΡΡΟΣ (with forepart of lion), have types both in Group E and in M 20 : 1, the former being pre-duoviri, both in the term of ΙΕΡΟΚΛΗΣ, the predominant and evidently latest eponym of Group E. (5 handles so dated. 2 other

handles in Group E, SS 2076 and 2166, name eponyms datable before 146 B.C.) On the other hand, the eponyms ANAPOMENHΣ, EPOMEN and ΠΙΣΙΝΟΣ, who date 7 handles in M 20 : 1, are apparently among the latest of the duoviri period, of my comment on E 14 : 3. The other two eponyms, ΑΓΙΑΣ and ΑΡΙΣΤΟΔΑΜΟΣ, must fall somewhere between.

So if M 20 : 1 is accepted as Sullan, the duoviri Knidian period as a whole is fairly well established as before 86, despite the fact that this dating indicates that none of the handles in Group E is later than about 110 B.C.

I should be much interested in a reexamination of E 14 : 3 by pottery experts, to see whether ~~this~~ the pottery in general seems as closely before Sulla as the handles apparently are. ⊕

The non-Knidian SAH of M 20 : 1 are to the best of my knowledge consistent in date with the Knidian.

VG

⊗ My particular concern here is to arrive at a reliable dating of fill { of the "Fourni House" excavated on Delos in 1960, since this supplies evidence for the dating of Koan, at a period when it is lacking at the Agora. Comparison with Group E pottery had suggested to the excavators that the Fourni House had been destroyed by the pirates rather than by Mithridates. I hope that the supplementary material in M 20 : 1, and in E 14 : 3 if this also is accepted as Sullan, may provide ~~the~~ parallels not present in the smaller Group E. the destruction

This group of handles was mostly covered in the study of MSBF handles assembled in 1956, see typed summary of 26.VI.56, and lists of various categories made at different times a little earlier. The previous listing had omitted SS 13985-6, both Rhodian; and a third Rhodian, SS 13984, though listed had not until now been read; however the names are not new to the group, and these three handles do not change the evidence on date.

For this class as here represented, APHZIKAHZ is about contemporary with the Koroni Rhodian; ΔPPOΘEOZ and the eponyms IEΠON and KAEZNYMOZ are late 3rd or early 2nd and otherwise well established in the fill; and the rest are between, i.e. 3rd century B.C. This lot does not include Rhodian eponyms thought to be the latest in the MSBF. It is interesting that two or more handles of ΔPPOΘEOZ have been found in the area of the Stoa of Philip on Delos: cf Vallois, L'Arch. Hell. de Delos (1942) p.68, note 1, on one found in the "galerie à l'ouest"; and two, TD 6263 and 6281, come from anastylosis operations in the Stoa of Philip in 1958.

The Thasian are datable in the 4th century and (SS 13898) perhaps before 400; on the date of TEAEZ(see Hesp. Suppl.X., p.126 with references. Three out of four Thasian in this lot are the only examples with their readings, but the names and styles of the stamps are familiar. Later Thasian have been found in other parts of the MSBF, including some which may go down to its time of shovelling in.

Not much information can be got from the Unclassified of this selection. The first may be Early Knidian, and would date before 200 B.C. (SS 13656). The reading of SS 13904 is doubtful; no parallel has been found. The combination A plus T in a monogram recurs several times in the MSBF on handles which like SS 13907 resemble Thasian and may be as early as the 4th century. SS 13654 is duplicated on SS 14436 from K, "clearing trench of inner rectangle in peristyle court of Heliaia, p.3651". The incuse mark on SS 13650 seems to be the impression of a coin, not well impressed; a similar impression, but not from the same coin, was found in Antioch. On SS 13650, DBT makes out a line of neck and chin which suggests a head thrown back relatively far, which as I understand it indicates a 2nd rather than a 3rd century date.

Of the Knidian, EYKPATHE and MHTPOAΩPOZ are among the commonest eponyms in the MSBF, see p.4 of the typescript of VI.56, and ΘEMI(T)NATOZ is also quite well represented in the fill. The examples here are the only MSBF handles naming the eponyms APXINHTIAAZ and KAEYKPA(; the first of these is probably earlier than the bulk of the Knidian in the MSBF; the fabricant of the second (recently read in this type) is common in the MSBF. An eponym ΦIATA(TOZ) is named on one other attested handle of the filling beside SS 13653. (A duplicate of SS 13653 is SS 12969 from a group of handles called "MSBF disturbed in early Roman times", not covered in MSBF SAH lists.) The name ΦIATATOZ should be added to the few listed p.5 of the typescript of VI.56 as MSBF names which in some (non-MSBF) types appear with the title phourarchos; the persons named on these MSBF handles may (as stated in the typescript) actually be phourarchoi, perhaps of the earliest period, second decade of 2nd century, or they may be other eponyms with the same name. Other eponyms named by AZKAH(HI) are ΘEMI(T)NATOZ, IAZEN, and HPOMA(ΘIEN), all ~~other~~ known in the MSBF, and not known as phourarchoi.

In sum, I don't think that the handles of this lot are of a later date than those of the filling as a whole.

SPARE

September 1, 1964

HAT

As I am sure you have gathered from my casting about, I cannot discern a ~~di~~ difference in date between the MSBF handles in general and your selected group from the west end, on which here are notes.

In contrast, the handles from H 13 : 1, the K well in the road west of the Middle Stoa, continue to stand out as a very small but remarkably consistent group of a little later than the Stoa filling.

Is it possible that the well continued to serve for a time while the northern part of the N-S wall was already in use? The ^{block} ~~stone~~ that continued the wall over the well looks in the photo perhaps not quite the same quality as the rest. The wall as a whole, wide as it is, and one-faced, surely suggests a rather heavy retaining wall such as might be needed for a good mass of earth. Would not a temporary terrace at the west end be a requirement while construction of the upper parts of the building at that end ~~was~~ was under way? Otherwise surely a tremendous height of scaffolding would have to be used, impractical and terribly expensive. If the filling of the temporary terrace was later used to tidy up to the south, might not this account for the puzzling "non-MSBF" fills in K on which I have given you notes - some seemed contemporary, some slightly later, etc., and a pattern did not seem to emerge.

(to HAT)

On the dates of M. Pryce's deposits

I (N 20 : 4). I note the second quarter date also in HSR's volume. Nothing in the SAH had seemed to me clearly datable later than 86 B.C.. The Knidian are all of the duoviri period save SS 7931, 2/2 of 2nd century B.C. But it is true that the Rhodian neck SS 7932 by its shape rather resembles the Antikythera Rhodian, which would bring it down into the second quarter; and that I do not know what other evidence than this deposit places the SPE fragment before 86 B.C.

So far as the SAH go, this deposit does seem to have remarkably little that is as early as 120 B.C. The handles thus seem to give some support for associating the 12 bronze coins having the crescent-star-crescent device with M.VI rather than with M.V., which I believe is Mr. Pryce's suggestion.

II (E 14 : 3). The handles are mostly Knidian, all or nearly all of the duoviri period. The single Rhodian is probably contemporary. I do not know what has given this deposit the suggestion of a late 1st B.C. date which appears annotated on the Deposit List. But note that in recent (IV-V.64) correspondence with HAT, Paul Lapp dated P 6025 from this deposit near the end of the 1st B.C.

III (N 19 : 1). Note new SAH analysis, copy attached.

The handles are divided like the rest of the pottery between Sulla-destruction refuse (here, ~~most~~ duoviri Knidian and probably-contemporary Thasian and Rhodian) and earlier stuff (here, 1/2 of second century, mostly 188-167 B.C.); the upper fill having in addition some material of the later 1st B.C. (among handles, only the Late Knidian SS 6711, HSR F 96). Most numerous are the handles of the Sulla-destruction period.

IV (B-C 10-11 : 1). Here the handles do include a good quantity which must date down through the 1st century B.C. perhaps into the last quarter, though also quite a lot of earlier stuff.

V (D 4 : 1). (HSR Group G)

The amphoras and fragments from this deposit are apparently not from the same fill as the coins in question.

Presence of Knidian handles of the duoviri period is obviously my chief test for Sullan date. That this series should be so dated depends mainly on the fact that numerous examples have been found in deposits so dated at the Agora.

There were none in Group E. I quote here from my letter of 3.V.63 to DBT:

"Group E: I do still think that the handles from this deposit antedate 86 B.C., in fact that they are probably before 110 B.C. since they include none of the approximately 23 yearly Knidian officials of the duoviri period. See Suppl.X, pp.146-150. These are a group of eponyms closely knit by interconnection between eponym and fabricant names, dated by the fact that they occur in such Sulla-destruction deposits as M 20 : 1, on which see for instance Hesp. XVIII, 1949, p.110, note 8; this latter deposit includes the eponyms ANAPOMENHZ and EPMON who seem to be among the latest of the duoviri period. Group E has no duoviri eponyms, but two of its potters, ENHICANHZ with bee and KYHPOZ with forepart of lion, do last over into the duoviri period; in Group E they both name IEPOKANHZ, the predominant and evidently latest eponym in E; so we may suppose that the handles from this deposit come down into the last quarter of the century, as does the inscription I 1594. . .

"I should remark that in III,62 GRE was not able to see a distinction in date between Group E and M 20 : 1 above-mentioned, at least in the brief study of the two laid-out groups for which there was time. . . He thought . . . both were deposited close to the time of Sulla..."

I venture to point out two deposits which seem to me to fall between Group E and the later Sulla-destruction groups (as far as SAH go): C 9 : 7 and M 23 : 1. These include only the earlier eponyms of the duoviri Period.

5.VI.58

SAH IN FILLS ASSOCIATED WITH SQUARE BLDG.

The SAH inventory numbers covered for each of the Square Building groups are listed at the beginning of the analysis of the group: see attached papers. Please let me know of any corrections to be made in these lists.

In summary, these seem to be the dates indicated by the handles:

Construction filling of the Square Building: third quarter of 4th century, if one discards as erroneously listed the Thasian SS 11524, and the Chian SS 11496, which belong in date with the Fill over the Floor. (Note they were listed by EV with some indication of doubt.) Also I have no good information on SS 10932 and SS 11567.

The five remaining handles are dated with unusual firmness in, or not long before, the third quarter.

Fill in trench for outer wall of Square Building: last quarter of 4th century.

Fill over floor of Square Building: 3rd century, to ca. 200 B.C. (A little before the MSBF.)

MSBF: to ca. 185 B.C.

South Stoa Building Fill: mostly MSBF types, but 2 or 3 a little later, before 167 B.C.

Water channel to east of Stoa Shops XI-XV (SS 11356-11370, ZA 1620-1636): Mostly 188-167 B.C.; possibly a little later is SS 11358.

Construction filling of Brick Building (SS 11075-11085, and 11621-4 from beneath floor): mostly 188-167 B.C., and possibly a little later, cf. SS 11075-7, about which I am not sure of the precise date.

Trench for foundation of S stylobate of Square Building: (SS 13224-33): mostly 188-167 B.C., but SS 13233, which names the eponym KAEYMBPOTOZ, is later, perhaps about 150?

M 18 : 10

This analysis supersedes
that of 21.V.58.

		unstamped				P 26273		small jar

The SAH analysis of this deposit made 21.V.58 was based on material provided by the first two (separate) lots of sherds known by that time. In June or the beginning of July, a lot more ~~times~~ ^{tins} turned up. The present note covers the three lots.

Possible pairs - non-joining - among the listed handles:

Rhodian rose-stamped handles, SS 14270 and 14295,

" handles with plain rectangular stamps, SS 14296 and 14297,
SS 14330 SS 14332

Knidian handles with eponym type naming ΜΗΤΡΟΑΣΠΟΣ, fab. type of ΑΡΙΣΤΟΚΛΗΣ

For the above, that is, appearance of the handles allows that the assembled pairs of supplementary stamp types were, each pair, on a single jar. The evidence is not too definite, because no pair of handles has the rim preserved on both of the pair. The handles of ΑΠΟΛΛΩΝΙΟΣ ΗΙΣΙΑΑΣ cannot be paired with any of the other Knidian, nor with each other, the appearance of the handles does not allow it. It seems ~~likely~~ ^{possible} that some ~~possible~~ joins were lost in the piecemeal study and weeding out of the fragments of this deposit.

Date of SAH in this deposit:

All five Rhodian names occur in the MSBF, and all save ΤΙΜΟΚΛΕΙΑΑΣ (a stray left over from the 1st half of the 3rd cent.) occur also in the Pergamon deposit. Whole jars are known of both ΔΑΜΟΚΡΑΤΗΣ and ΑΡΙΣΤΟΣ, and ~~others~~ others naming each of the two eponyms ΑΙΝΗΤΩΡ and ΑΘΑΝΟΔΩΤΟΣ. The jar shapes and all context known agree in placing the Rhodian of this deposit (save the leftover SS 14328) not far from 200 BC, perhaps a little after.

^{stamp}
All Knidian types occur also in the MSBF.

For the rest: a duplicate of the stamp of ΑΥΚΟΣ appears on SS 10857, from the fill over the floor of the Square Building; and the same fill included a stamp of the Thasian ΓΟΡΓΟΣ (not the same device). This fill according to SAH perhaps does not go beyond 200 B.C.; its pottery has been compared by GRE (in 1949?) with that of the Komos cistern; ^{we} placed both in the last quarter of the 3rd BC.

Rhodian			APICTEIAAZ	IAN.	7224	
	IEPOKAHE	letter F			6812	jar, one handle pres. Sec. stamp X in lower attach.

Note that the names in parentheses are those to be restored on the missing other handles of the amphoras of which we have one stamped handle.

Of the 20 or 21 SAH from this deposit (SS 7160 possibly does not belong), both abandonment and upper fills, a majority are of the period of the duoviri in Knidian stamps, datable as I have thought ca. 108-88 B.C.; the ^{Knidian} eponyms here represented ~~max~~ do not include either the earliest or the latest of the series. Contemporary with the ten Knidian handles of this $\frac{1}{2}$ period are probably the Thasian handle SS 7227 and the Rhodian restored amphora SS 6812.

The Rhodian handle SS 7224, and 7 Knidian handles (SS 6813, 7160, 7221, 7369, 7163, 7285, and perhaps 7161 - to take them in their order in the foregoing list) are of the first half of the 2nd century, mostly of about 188-167 B.C. according to present belief.

The only stamped handle which confirms a late 1st century B.C. dating for the upper filling is SS 6711, the late Knidian handle, cf. Hesperia Suppl.X., p.160, nos. 166-169. This is the only handle which has been given a number (F 96) in HSR Group F. pp. 159-160

2.1. TX.62

This lot had been
designated for GRE.

I don't know if there are
any there he would like.

23.V.62

SAH FROM WATER CHANNEL EAST OF STOA SHOPS XI - XV
 "put out of use and probably filled in at time of construction
 of Stoa of Attalos, pp. 2341, ff."
 (This lot has been included in the Stoa of A. analysis)

	<u>fabricant</u>	<u>device</u>	<u>eponym</u>	<u>KT</u>	<u>SS</u>

THASIAN	ΗΥΘΙΩΝ ΙΙΙ 41	palmette			11370	

The Knidian eponyms ΑΡΙΣΤΟΓΕΝΗΣ and ΑΡΙΣΤΟΚΑΗΣ seem to be datable after 167 B.C., and the rest to be all phrourarchoi, with the possible exception of ΦΙΛΗΠΠΟΣ, who may be earlier.

The Thasian is probably of the latter 4th century B.C.

Unknown origin	(not read)				14150

Roman amphora, not stamped, P 25797

Of the eponyms, ΑΡΙΣΤΟΚΛΗΣ and ΜΕΝΙΠΠΙΟΣ appear in Stoa of Attalos construction fill, ΦΙΛΙΠΠΙΟΣ in this same type (KT 193) has been found in Corinth, and ΚΑΕΥΜΒΟΤΟΣ is dated both by the Stoa estr. and by the destruction of Corinth. ΦΙΛΙΤΙΑΑΣ is known only in this type, in very few examples, but is to be dated by the title phourarchos presumably to 188-166 B.C. The fabricants ΔΟΞΑΙΟΣ and ΚΑΕΥΗΘΑΙΣ with double axe have both been found in Corinth. The eponym ΕΥΠΑΓΟΡΑΣ has not been found as yet in Corinth, nor in Stoa of A. estr. fill, but in other contexts which, with the connection of names known with ΕΥΣ., make clear the term fell not later than shortly after the destruction of Corinth. Which does for the deposit as a whole. The date seemed a bit early to him for the Roman jar, but there is no evidence against it and she accepts it.

	OEYFENHE		NIKAZIB(OYAOS) . ep.		6552
	NIKAZIBOYAE		NIKAZIBOYAE, ep.		6555
UNKNOWN ORIGIN	IAZ[(Thasian fabric)				6548
	listed by M2				

The Thasian 6562 is datable 1st half of 2nd, possibly earlier: an example/ in the Koukla Factory fill. The Rhodian is early 3rd century or earlier. The Knidian correspond with those in the Middle Stoa bldg fill, i.e. 1st quarter, according to present SAH guess; save that MHTP(OARPOZ), a rather uncommon eponym (11 examples on file) does not occur in the MSBF, does occur in pre-Stoa of Attalos fill.

That is, the handles seem to make the S. Stoa about contemporary with the M.Stoa, and apparently earlier than the EA, except for SS 6564 which may bring it down a few years toward the EA: note this handle seems to have been found in the lowest stratum.

SO.VII.56

Note the addition of SS 6548 etc., catalogued in T notebook pp.399 ff. These were the original SSBF lot, as recently confirmed by EV. He says there were no other catalogued objects from the original fill, but some pottery, I think not fully processed as yet, has been kept from the same place.

Date of most of the handles corresponds with that of those from the MSBF, names and/or actual stamp types being repeated between the two. Only in the Knidian category are there a couple of later types, distinctly recognisable:

KT 375, SS 15170, type of ΔΗΜΗΤΡΙΟΞ with anchor (pt.left), term of ΑΡΗΞ((??)
 1215 12190 " " ΕΡΤΙΕΝ " 8 ΕΠΙΝΙΚΙΑΑΞ
 and
 perhaps 940 12632 " " ΑΥΞΑΝΑΡΙΑΑΞ " " ΑΕΞΝ, though
 this eponym name occurs in the MSBF. Another example of KT 1215 was found in ΧΕΥΚΑΡΕ, Cor
 and a near-duplicate of KT 375 in the Stoa of Attalos fill.

Certain SAH of which the finding places have been described as below the floor of the South Stoa (at one time called the Kappa Building) suggest that the layer or ^{somewhat} layers in which they were found were laid, or accumulated, ~~intermittently~~ later than the building or terracing fill of this Stoa. The two lots known to me are SS 6579-6585 (T 941-7) and SS 14136-8 (T 3600-3602), catalogued respectively by EV and HAT. The first lot, analysis made 17.VI.52, include two stamps which still seem to belong ^{and/or} to the third quarter of the 2nd cent. later than the destruction of Corinth ~~and~~ the construction of the Stoa of Attalos, SS 6579 (KT 122, ANAZANAPPOZ, term of ΦΙΑΙΗΠΙΟZ) and SS 6585 (KT 971, ΜΕΝΕΞΤΡΑΤΟZ, term of ΔΙΟΚΑΗZ). The second lot include SS 14137 (KT 851, ΙΠΠΙΟΔΟΧΟZ, term of ΕΥΘΡΑΤΟΡΑZ) of which the eponym is not established as before the middle of the ~~the~~ century, though name-connections and other deposit evidence show it is datable little later than stamps found in Corinth and in the SABF. (A distinct ΕΥΘΡΑΤΟΡΑZ holds office in the duoviri period, being named in many duoviri types.)

ΔΑΜΟΚΡΑΤΗΣ?	sec. stamp rose			(sec. stamp only)	12717*			

Unread Rhodian stamps from this deposit ⊕

Circular stamps with rose:

SS 519, 557, 680, 875, 878, 896, 1466, 1468, 1472, 11817, 11832, 11837, 11873, 12087, 12123, 12216, 12283, 12285, 12373, 12378, 12416, 12517, 12522, 12637, 12651, 12730, 12748, 12778, 13044.-

Rectangular stamps without device:

SS 547, 553, 569, 572, 660, 789, 1009, 1289, 1337, 1476, 11694, 11701, 11792, 11793, 11823, 11839, 11969, 12025, 12075, 12084, 12085, 12088, 12089, 12238, 12239, 12250, 12265, 12270, 12335, 12349, 12354, 12355, 12357, 12379, 12449, 12498, 12500, 12461, 12504, 12646, 12681, 12709, 12764, 12768, 12805, 12770, 12824, 12852, 12860, 12984, 13904, 13911, 13984.-

* Note this sec. stamp (rose) appears on stamps of Δαμοκράτης (see sec. stamp file) and, apparently from jars of Δαμοκράτης, on stamps naming Καλλικράτης and Κλεοκράτης, eponyms: see Tarsos nos 75 A and B with context of mid. 3rd to early 2nd c. B.C.

For sec. stamps in Pergamon, see p. 484

⊕ Also unaccounted for in the analysis is SS11794, K 1696. The SS card has not been found, there is no reading in the notebook, and we have not been able to make a reading from the leica contact there, but can see that it is a round stamp with rose, double circle, 3rd cent.

2.VII.55

REMOVAL FROM MSBF OF SS 13005-13031 (K 2616-2642)

In the accompanying analytical list of these handles, "MSBF" appears under "Comment" whenever there are parallels in the deposit. Items dated "Before 150" do not appear in the deposit apart from ~~this list~~ ^{this list}, and are evidently of somewhat later date though still in the first half of the century, possibly still even in the 1st quarter, some of them. The Rhodian eponym ANIXTON is one of a very few who do not appear in the MSBF while being present in quantity in the Pergamon deposit; these are all a little later than the MSBF Rhodian, (called ca 180 BC) and apparently indicate that the close of the Pergamon deposit was later than that of the MSBF.

v For the mixed character of this particular lot, note 3 handles of the 1st B.C., and the fact that only 7 stamps with parallels in the MSBF as otherwise listed.

2.VII.55

TO BE SUBTRACTED FROM MSBF GROUP: SS 13005-13031
 Location, described by EV 1953 as possibly disturbed,
 "26-28/KE-KA; Fountain House Porch to stepped Retaining Wall;
 (K 2616-2642) Layer I; p.2110."

SS	Knidian Type	Rhodian name	Thasian name	Miscel.	Date	Comment
13005			ΔΗ[		Early 2nd?

ΚΑΕΥΗΘΑΙΣ	double axe	ΘΙΑΗΘΙΟΣ	909	10442	
UNSTAMPED				P 19519	jar

(There were no non-Knidian SAH.)

Listed by GRE in list of 2xx 16.II.51 as "2nd c., first half."

The stamps belong to the period of the Combined List of pre-destruction Corinth and Stoa of Attalos construction. The eponym ΕΥΚΡΑΤΙΩΝ who does not appear in that list is supplied by SS 13220 from a pre-Stoa of Attalos group, there the name having the title ΘΡΟΥΠΑΡΧΟΣ. All the eponyms in the well here listed appear with this title, so probably the group dates 188-167 B.C. None of the eponyms appear in the MSBF; the name ΘΙΑΗΘΙΟΣ does appear, but it is plainly a different ΘΙΑΗΘΙΟΣ, having quite different connections from the one named by a fabricant ΚΑΕΥΗΘΑΙΣ who uses the double-axe, most of whose activity fell near the middle of the century, according to the other eponyms he names.

The unstamped Knidian jar P 19519 according to its proportions is a little earlier than the stamped fragments, should probably date at the beginning of the century. I.e. it is closer to SS 7542, period of MSBF, than to SS (new jar from III cistern at 6/AH), period of ΘΡΟΥΠΑΡΧΟΙ.

Middle Stoa Building Fill

Interim Report on date of latest handles

The assortment of handles in this fill consists of Rhodian (much the largest number), Knidian, Thasian, Parian, Coan, examples of the Hikesios (Chian?) and Sokrates groups, as well as miscellaneous other jar handles; also a few stamped lagynos handles. The variety is great, and includes many types which need further study. But apart from ten Knidian and late Knidian handles (Knidian: SS 499, 589, 591, 670, 890, 1088, 1266; "Late Knidian": SS 666, 887, 1267), I see nothing ^{regarding to present knowledge} which indicates a date later than the first quarter of the 2nd century BC. These ten handles are presumably from impure parts of the fill. The Late Knidian are probably post-Sullan 1st BC.

An analysis has been made of the Knidian handles, which will probably prove to be the most informative part of the handles. I have also reexamined this year the rest of the handles from the fill, with the exception of about 50 Rhodian (from Pausanias to the end of the alphabet). These 50 have been checked from their SS cards today, and those appearing latish have been investigated. None is in my opinion datable later than the 1st quarter of the 2nd century. The systematic study of the Rhodian, carried out so far through KPHEN (somewhat over 60 percent) includes a general investigation of the names occurring on them. Up to the present, a few epoxyma are apparently to be dated toward the end of the first quarter (Agloumbrotos, Theaidetos, probably also Ainesidamos, Aineter). The rest are earlier, a great many being datable around 300.

The fact that the Rhodian stop at about the end of the 1st quarter is not very significant, since this is in general the case in Athens with Rhodian handles. Probably more to the point is the fact that the Knidian (with mentioned exceptions) form what appears to be a very compact and consistent group of types which I believe will turn out to be demonstrably earlier than the later types found in Greek Corinth and in the Stoa of Attalos construction fill. It may be observed that nearly half the Knidian handles in the HSBF proper - 47 - are dated in the terms of only 7 epoxyma altogether.

The following Knidian handles from the Middle Stoa Building Fill bear stamps which have not been read : 546, 560, 574, 691, 715, 719, 748, 749, 757, 997, 1285. Most of these are clearly of early date for Knidian. None is identified as datable after 150 B.C.

Preliminary comment on date of Knidian

Of the starred items, SS 870 (from a jar of Damokrates son of Aristokles) and SS 589 (Charmokrates, in the term of Hermophantos) are probably to be dated in the third quarter of the 2nd century B.C. These two handles are much worn. The other five starred types are of the late 2nd or early 1st century B.C.

Apart from these seven handles, the Knidian are before 150, and some at least probably of the third century. They seem to be, as a group, earlier than the stamps so far tabulated as from the construction fill of the Stoa of Attalos.

Investigation is to be made of the seven late handles, to see whether they can be separated from the rest.

The following Knidian handles from the Middle Stoa Building Fill bear stamps which have not been read : 546, 560, 574, 691, 715, 719, 748, 749, 757, 997, 1285. Most of these are clearly of early date for Knidian. None is identified as datable after 150 B.C.

Preliminary comment on date of Knidian

Of the starred items, SS 870 (from a jar of Damokrates son of Aristokles) and SS 589 (Charmokrates, in the term of Hermophantos) are probably to be dated in the third quarter of the 2nd century B.C. These two handles are much worn. The other five starred types are of the late 2nd or early 1st century B.C.

Apart from these seven handles, the Knidian are before 150, and some at least probably of the third century. They seem to be, as a group, earlier than the stamps so far tabulated as from the construction fill of the Stoa of Attalos.

Investigation is to be made of the seven late handles, to see whether they can be separated from the rest.

Notebook references for this fill, ZA pp.1571, and 1815. These are two cuts, between which a martyra was left. The SAH from apparently this martyra, same stosis, are SS 11614-11620, the finding-place being described as "East colonnade of Square Building; martyra opposite Shop XVII, Layer I (1 cent. B.C); p.2811." See separate analysis of SS 11614-20 (which were not included in the Kardex list), wherein is quoted HAT's summary of the fill, which had Pergamene but no Arretine.

SAH listed on this page include examples of KT 133 and 673, probably both 1st half of 2nd, and of KT 1538 of about 100 B.C. The rest are considered 1st BC, post Sulla. Probably contemporary with these latter is SS 11031, Rhodian with large rose. The rest of the Rhodian and Thasian listed on the next page are 2nd and 3rd centuries B.C.

	unread						11616	
RHODIAN	ΑΡΧΕΙΛΑΟΣ			ΘΕΣ.			11614	
ROMAN	Latin stamp (NIC retr.)						11620	retr. on rim

"We now start to cut away the martyra 1 m. wide, etc."
See ZA p.2810; this is apparently the martyra mentioned ZA p.1815, and SS 11614-20
seem to be from the same fill as SS 11030-39 etc (see separate analysis)

On the fill, ZA pp.2810-11 (HAT): "Layer I consists of loose earth, comprising a mass of dug bedrock deep blue in color, ash, burning and great quantities of broken pottery. . . . It suggests that a great shallow crater was opened here in the 1 cent. B.C. (the date of the pottery), etc. . . . Pottery from Layer I: 1 cent. B.C. (much Pergamene, bulbous unguentaria, grey ware, no Arretine)."

The Rhodian is of the 3rd century B.C., the Knidian SS 11617, of about 100 B.C.;
the rest of the Knidian are "Late Knidian" considered 1st B.C. after Sulla.

The Knidian include an example of KT 869, period of Stoa of Attalos fill, and of KT 925, of the end of the 2nd B.C. The rest are considered post Sulla, 1st B.C.

Of the Rhodian, SS 11229 is early, but the rest - SS 11230 and the unstamped jars may well be contemporary with the majority of the Knidian. The Coan jar with offset at the base of the shoulder as well as that at the base of the neck, also seems to come in during the middle half of the 1st B.C.

Note several more jars, of unknown provenance, P 21776-9, 21784-92, 21794; a number of these have dipinti.

STOA OF ATTALOS BUILDING FILL : Z H GROUP

Single handle, with reading ZH in more or less rectangular stamp with rounded corners. Thick rather arched handle; red clay with bits and holes, remains of thick cream slip(?).

Handles of this kind have already been dated by presence in MSBF.

M I S C E L L A N E O U S

SS 10731 Handle rather like Chian, but broadish; stamp an unidentified letter or monogram.

SS 10732 Broad short-topped handle of micaceous red clay, light slip(?), and red stain above handle; cf. some possibly Parian (e.g. new jar from III). Stamp an alpha with dot inside. 3 other examples include SS 13234, from pre-Stoa fill?

SS 10733 Handle rather like Chian but broadish and has many white bits; as in Chian, distinct grey core, and light wash over dark under surface. Stamp not made out, seems to be the impression of a monogram stamp.

SS 10765 Small fragment of handle which might be Chian, with gem impression of Victory and Trophy, of which another example was found in the "4th century hole" in Section N, deposit dated 3rd quarter of 4th, though not without impurity (SS 11348, Knidian of early 2nd).

SS 10779 Small fragment of broad handle of fine micaceous red clay with buff core and surface. Stamp with large letters, apparently A Y or A Y as exists on file with small variations, sometimes on EK handles.

SS 10940 Handle of russet micaceous clay and light grey core, like Thasian, thicker than most Thasian. Stamp reads]PA retrograde, with a curved letter before the rho. Cf. a rubbing on file from Benachi, @PA or BPA retrograde (rubbing of 1955-56); no note on fabric of handle.

SS 10961 Handle of Thasian type;; stamp is a delta or a monogram with delta. Cf. Pnyx Miscellaneous from the Filling of Period III of the Assembly place, and date probably before ca. 340 B.C.

SS 11049 Handle which has been called Knidian, but the clay is over-fine-grained and hard. Left end of a XX 2-line stamp: E|
ΔPA| an iota(?) before the delta

SS 14053 Handle of Thasian or Mendacian shape, with rim preserved. Stamp an aryballos or ribbed mug in beaded circle. Examples of this and closely resembling dies have been found in various 4th century deposits. (See under aryballos.)

These handles do not help to define the date of the SABF.

Listed by AA

The greater part of this group is datable in the 3rd century B.C., many in the first half of the century, including those naming APTEMIAQPOZ, ΔΙΟΚΑΗΣ, ΕΠΙΓΩΝΟΣ, ΖΗΝΩΝ, ΘΕΥΑΩΡΟΣ (the fabricant), ΚΑΛΛΙΚΡΑΤΙΔΑΕ, ΚΡΕΩΝ, ΜΥΤΙΕΝΥΧΗΕΧΧ ΟΝΑΣΑΝΑΡΟΣ, ΠΟΛΥΚΡΑΤΗΣ, and TIMOKAEIAAE; some of these are close to 300 B.C.

Apparently none is later than the latest from the deposit at Pergamon, i.e. presumably than about 180 B.C. This is in line with the decrease in Rhodian after the early 2nd century noticed generally at the Agora, and cf. SEHN, p.1647, n.10.

However, the first eponyms listed, APATOSANHE and APIΣΤΕΙΑΔΕ (II), are evidence for the relative dates of the MSBF and the SABF, since they are two of the small group of eponyms (7 or 8) who appear in the Pergamon deposit but not in the MSBF, and who are seen by various indications (e.g. appearance of secondary stamps on handles naming them) to be consistently a little later than the MSBF Rhodian group.

The Rhodian in the SABF are thus more useful in defining the date of MSBF than that of SABF.

Pre-Stoa groups have not been included in this study, but SAH items in these groups have been checked in the notebook entries - small photographs and partial readings - in case of doubt also on the inventory cards with identification readings, or even on the actual handles. No item was found that appeared to be later than this lot according to my lights, and most were clearly earlier. Observed no Knidian eponym not already listed in the list made 1.VI.56 of drawn from finds in Corinth and Carthage plus Stoa of Attalos fill (those included in this list); but some of the pre-Stoa items may fill in a Stoa item (pre-Stoa) example where previously the name had been known from Corinth only,

1

Pre-Stoa groups have in principle not been included in this list and study. SAH items in such groups have been checked in the notebook entries - small photographs and partial readings - sometimes also in case of doubt on the inventory cards with identification readings, and/or the actual handles. In this quick check, I found no item which seemed to me later than the 1st listed here, and most were clearly earlier. I noticed one name, that of EYKPATIGN (with title ΘΡΟΥΡΑΡΧΟΣ), that supplements the list of eponyms drawn 1.VI.56 from post-MBBF types found in Corinth and Carthage and the Stoa of Attalos fill.

1

That is, fills related to the Brick Building, the Square Building, etc. Exceptionally, the "pre-Stoa" handles from Section I have been included - see beginning of list.

2

SS 13220, example of KT 1383, from just above floor level of Sq. Bldg., area Piers 10-15.

 Parian	 1	 type with <u>omega</u> , cursive 2nd BC?
 Pontic	 3	 Sinope class, believed by VG, and some Russians, all to predate 183 B.C.
 Parmeniskos Group	 4	 3rd - early 2nd B.C. probably SS 10138 paralleled in MSBF SS 10125 " " post-MSBF Kappa Hell. fill (SS 13428)
 Latin	 2	 Both read MAARCI; inquiry out to ELW whether this may be <u>2nd B.C. ?</u>
 Knidian	 44	 MSBF period X later 1st half of 2nd B.C. 5 may be as late as the 3rd quarter 2nd 18 duoviri period (SS 9193, late 2nd, SS 10170, later) 19 <u>2</u> 44
 unclassified	 7	 seem to be Hellenistic, some possibly earlier, none believed to be later than say 3rd quarter 2nd

summary - 2

With the exception of the 2 Knidian duoviri period handles, SS 9193 and SS 10170, and perhaps the 2 Latin stamps, this group of handles suggests a deposit of the third quarter of the 2nd century B.C. containing considerable old dump. The small number of 2nd century Rhodian is characteristic, the import having dropped off during the first half of the century.

N 20 : 7 (2 cistern at 67/IH)

Supplementary note on
Analysis of 14.IV.52

Since the 1953 excavations, the Knidian and Coan handles from the Middle Stoa filling include parallels for all Knidian and Coan in this deposit.

The abundant additional Rhodian handles found in the MSBF in 1953 still do not include one naming the eponym ~~ΞΕΝΟΦΩΝ~~; I have therefore dated him, who also appear in the Pergamon deposit but not in the MSBF, with a few others, before about 180 B.C., but after/ the laying of the MSBF. See Middle Stoa 1956 manuscript, pp.6-7, on these eponyms, where confirmation of another sort is advanced for dating them at just about this point. Since the eponym ~~ΞΕΝΟΦΩΝ~~ appears in N 20 : 7, I suppose this deposit to be slightly later than the MSBF, but I have no evidence to put it later than 180. (The three other Rhodian bear potters' stamps, hence cannot be so exactly dated, but the activities of these potters clearly overlapped the first 20 years of the century.)

The group of handles in this cistern has perhaps nothing earlier than the end of the 3rd century, and in this way (as well as in its size) differs from the group of handles in the MSBF. The end date of the cistern I still believe (as in 1952) to be about 180; but the MSBF, following study of the 1953 finds, now seems to me to have been laid down a few years - less than a decade - earlier than 180, as set forth in the 1956 Middle Stoa typescript.

The Howland end dates of several of the types in this cistern fit nicely, especially these of Types 32, 45 C.

Note the coins from this cistern include one of those "Delos after 166" later items which have been part of the occasion for dating of the MSBF, but the date of which is now discredited, at least by M.T. (III-1 38, no.3.)

	BOTPYΣ	trident	ΘΡ. ΑΡΙΣΤΕΙΑΝΣ		336	4598	ZA and Corinth (ep)
	ΘΕΥΓΕΝΗΣ		ΘΙΑΙΗΘΣ ΘΙΑΙΗΘΣ		706	6298	MSBF (both names)
	ΘΕΥΑΣ(		ΝΙΚ(		748	4604	MSBF (both? names)
	ΙΗΘΑΘ(XΘΣ)		ΑΥΖΑΝΙΘΣ (ep.)		856	4599	post MSBF in K(type fab. in Corinth
	ΜΑΡ(ΘΝ)	club	ΘΙΑΙΗΘΣ (ep.)		1734	6297	MSBF
KOAN	ΘΕΥ(	club				4605	

The Koan SS 4605 is a small handle, presumably from a fractional jar. We have no parallel for the stamp; but note that there are many Koan stamps with name plus club in the MSBF.

Two of the Rhodian are old (third century), but SS 4600 should be just after MSBF and before about 180.

Of the Knidian, SS 4598 is post MSBF, and apparently datable 188-166: the title phourarchos belongs to the period of Rhodian occupation. It seems that SS 4599 is also post MSBF: though an eponym ΑΥΖΑΝΙΘΣ is named on several MSBF types, ^{other} ΙΗΘΑΘΧΘΣ and his very numerous connections are definitely post MSBF, many of the eponyms being phourarchoi, and others probably 166-ca.146 B.C.

Group seems to run to second quarter of second c. B. C.

SAH
 GROUP OF CONTEMPORARY OR ALMOST CONTEMPORARY WITH MSBF : R H O D I A N
 (though not listed by excavator as MSBF)

SS 13767 - 13796, from Section K, 1953, "25-26/AA-AB, cutting intermediate strosis to working floor"

<u>fabricant</u>	<u>device</u>	<u>eponym</u>	<u>month</u>	<u>SS</u>	<u>shape, etc.</u>
		ΑΓΕΜΑΧΟΖ	ΘΕΥ.	13782	
		ΑΓΕΜΑΧΟΖ	ΥΑΚ.	13783	
		ΑΙΝΗΣΙΔΑΜΟΖ	ΔΑΔ.	13791	
ΑΡΙΣΤΟΝ	caduceus r.			13786	
ΔΑΜΟΚΡΑΤΗΣ	rose			13790	0
ΔΙΟΓΕΝΗΣ	caduceus r.		ΥΑΚ.	13796	
ΔΙΟΖ				13792	
		ΚΑΛΛΙΚΡΑΤΗΣ	ΑΓΡ.	13787	
		ΚΑΛΛΙΚΡΑΤΙΔΑΣ	ΔΑΔ.	13795	
	rose	ΚΡΑΤΙΔΑΣ	ΥΑΚ.	13793	0
ΜΑΡΣΥΑΣ			ΠΑΝ.	13785	
ΝΙΚΑΓΙΣ				13784	
ΟΛΥΜΠΙΟΖ	burning torch			13789	
		ΣΥΜΜΑΧΟΖ	ΥΑΚ.	13788	

All these names occur in the MSBF proper. With the exception of ΔΙΟΓΕΝΗΣ and ΚΡΑΤΙΔΑΣ, who may be as early as the third quarter of the 3rd century, these belong to the common names in the MSBF, so very likely the later ones.

GROUP OF SAH CONTEMPORARY OR ALMOST CONTEMPORARY WITH MSBF : K N I D I A N
(though not listed by excavator as MSBF)

SS 13767 - 13796, from Section K, 1953, "25-26/AAWAE, cutting intermediate strosis to working floor"

<u>fabricant</u>	<u>device</u>	<u>eponym</u>	<u>KT</u>	<u>SS</u>	shape etc.
ΘΕΥΑΩ(		ΔΑ(	741	13767	
ΜΑΡΩ(N)		ΔΑΜΟ(	1095	13774	←
(ΘΕΥΑΩΡΙΑΔΑΣ)	device	ΕΥΚΡΑΤΗΣ	1379	13773	☐
ΜΟΡΜΙΣ	bouk.	ΘΕΑΙΑΗΤΟΣ	2034	13768	
ΑΡΙΣΤΟΓΕΝΗΣ		ΝΙΚΑΣΙΒΟΥΛΟΣ	229	13772	←
ΝΙΚΑΣΙΒΟΥΛΟΣ	anchor	ΠΟΛΙΟΥΧΗΣ	1671	13771	
ΕΥΒΟΥΛΟΣ	trident	(ΦΙΑΗΗΤΟΣ)	629	13769	

Note that all these occur in the MSBF save ΘΕΑΙΑΗΤΟΣ, who may be slightly later than the MSBF. Of the cut type of ΕΥΒΟΥΛΟΣ originally dated in the term of ΦΙΑΗΗΤΟΣ, there is one example in the MSBF (SS 869), and no example of the uncut type, so possibly SS 869 is an impurity as assembled in the MSBF (not then recognized as such), and SS 13769 is also, like SS 13768 (ΘΕΑΙΑΗΤΟΣ), slightly later than MSBF proper. Perhaps the ^{about} rest correspond with the latest part of the MSBF.

21.VIII.59

The post-MSBF eponyms here are ΑΠΟΛΑΣΗΘΙΑΣ, ΑΡΙΣΤΕΙΑΗΣ, ΘΕΥΑΟΤΟΣ, ΚΑΗΝΟΠΟΛΙΣ, and I do not feel too sure of the earliness of this ΦΙΛΙΠΠΙΟΣ, since there is only a single example in the MSBF (SS 869, from Section Θ), whereas a number have been found in post-MSBF SAH groups from Section K (1953), and a phrourarchos ΦΙΛΙΠΠΙΟΣ did exist. The four other listed post-MSBF eponyms are all phrourarchoi.

An additional type of this period, 188-166 B.C., is in the Knidian fabricant list, that of the ΠΑΙΔΙΑ ΘΕΥΑΡΠΙΑΑ, without eponym in the type.

Note that the dating of these groups of SAH depends largely on the Knidian.

	ΤΕΖΩ		13037	

21.VIII.59

On present information, these items do not further define the date of the handles as a group. The Thasian may both be before 200 B.C. Of the Koan, ΡΟΔΟΚΑΝΣ occurs in the MSBF, while for ΔΙΟΓΕΝΗΣ there is no stamp context but this, as is true for the rest of the above, save the Parian, which is MSBF.

POST-MSBF KAPPA 1953 : TO CA. 166-146 B.C. : R H O D I A N

18.VIII.59

From the list, it seemed possible there were pairs from the same jar. The handles having been got out, and the obvious possibilities examined, find none, but take note of the appearance of the handles:

SS 13760, of ΤΙΜΩ, looks very late, corresponding with other evidence to suggest it is ca. mid 2nd. It is rather roughly made, and short-topped. (No rim.)

Post-MSBF eponyms: ΑΡΙΣΤΕΙΔΑΣ, ΑΡΧΙΑΙΔΑΣ, ΞΕΝΟΦΩΝ. These all occur at Pergamon, hence presumably before ca. 180 B.C.

Post-MSBF fabricants: ΑΜΥΝΤΑΞ with wreath, this ΑΡΙΣΤΟΚΛΗΣ, and probably others in addition to ΤΙΜΩ.

POST-MSBF KAPPA 1953 : TO CA. 166-146 B.C. : KNIDIAN

18.VIII.59

Of 61 handles above listed with the names of Knidian eponyms, apparently 16 or 17 are of the MSBP period, 17 or 16 of the period 188 - 167 B.C., and 28 - or 46 per cent - seem to be datable ca. 166 - 146 B.C.

POST-MSBF KAPPA 1953: TO CA. 166 -146 B.C. : VARIOUS GROUPS

UNKNOWN ORIGIN	EKATAIOZ	amphora		13763		
	EYBIOTZ			13500		

18.VIII.59

The Early Knidian appear also in the Knidian list from this group, at the end of the list by fabricant.

Two Chian (one a lagynos handle) ~~have~~ in the MSBF bear the same name as SS 13490. They are considered latish in the series of Chian in the MSBF. (See commentary.)

One would expect the Coreyorean(?) to be 4th-3rd cent. B.C.; however, ^{for this stamp} the only context apart from the present is presence of several in Corinth. ^

The Pontic belongs to Grakov's Group VI, formerly dated 122-70 B.C., but I think he has got back to 150 B.C. now. (I should finish it at 163 B.C.)

The Thasian ΠΑΙΕΤΡΑΤΟΖ is not attested as early as the MSBF, but SS 13775 comes from the group SS 13767-13796 which must be nearly contemporary. The stamp of EKATAIOZ is matched at Pergamon. Nothing better on EYBIOTZ than here

POST-MSBF KAPPA 1953: FROM GROUPS TO THIRD QUARTER 2nd B.C. : K N I D I A N

In this lot, of legible Knidian with eponym names, 41 altogether, over 40 percent are leftovers from the period ca. 188-167 B.C., and nearly 25 percent more are of the preceding period (date of the MSBF). The other 35 percent are divided about equally between the 166-146 BC period and the third quarter of the 2nd century.

The latest eponyms are apparently ΑΓΑΘΟ(ΚΑΗΣ?), who may possibly be later than the 3rd quarter, though not as late as the end of the 2nd century, ΕΥΣΠΑΝΩΡ, ΚΑΛΑΙΑΜΑΣ, ΦΙΛΙΠΠΙΟΣ (? KT 1735), and ΦΙΛΟΜΒΡΟΤΙΑΔΑΣ; the four latter should be third quarter.

POST-MSBF KAPPA 1953 : GROUPS TO CA. THIRD QUARTER 2ND B.C. : V A R I O U S

	<u>fabricant</u>	<u>device</u>	<u>eponym</u>	<u>month</u>	SS	
Rhodian		rose	APIETEIAAZ	ΘΕΣ.	13861	0
		ivy leaf	APIETONIAAZ		13649	
			APXIAAIAAZ	ΔΔΔ.	13859	
			IEP.AETYMHAHZ	ΔΔΔ.	13539 ⁿ	(retr.)
	(illegible)		(illegible)	ΑΠΤ.?	13862	
	"				13860	
		caduceus			13863	Rhodian <u>lagynos</u> fr.
Thasian	ZATYPOZ	vase, VIII			13538	ex. of <u>Bon</u> 1532
Chian	APIZTOAHMOZ				13658	Chian <u>lagynos</u> fr.
Early Knidian	monogram  (ligature)				13946	
		unidentified (incuse)			13637	

Of the Rhodians, all eponyms, APIETONIAAZ is ca. 3rd quarter of 3d B.C., APIETEIAAZ and APXIAAIAAZ are toward 180 B.C. (in Pergamon deposit but not in MSBF), while AETYMHAHZ is ^{ca.} mid-second B.C. ^{or} ~~perhaps late third quarter~~ (one or two ex. found in Carthage).

The Thasian has no better context than the present. The fabric suggests a date in the 3rd or possibly 2nd cent. B.C.: a rough stamp on the vertical part of a light handle.

For the Chian there is no better context than the present.

Of the Early Knidian, SS 13946 is matched in the MSBF, while another example of the type of SS 13637 was found in AA, well at 97/T, the Bone Well (G 5 : 3); the latter deposit is now dated 2nd quarter of 2nd (GRE) or about mid 2nd.

	+	thyrsos	10859 (Name possibly Aischron.)
	NE[OMANAPOZ??]	(not preserved)	10960
	JTHE	(end of stalk? pres.)	10871

Date: No pre-Macedonian handles, and probably all are 3rd century, possibly to beginning of 2nd. *None here of the names listed as latest in MSBF Thasian.*

Nikodemus Ti (mokratoos?) occurs in EE cistern at 53/E and AA cistern at 81/M, both of which suggest a date not later than the early 3rd. The two stamps with Choires and that with Nikanor Hege (are to be associated with the fill in Y cistern at 20/MB, where the name Choires appears in a stamp having the ivy leaf exactly as in SS 10814 here. (The Y cistern had 12 handles, Thasian, Chian?, and Rhodian (chiefly), of which only two of the Rhodian (SS 7085 and 7090) go down as late as about 200.)

The fabric of the group analyzed here indicates 3rd cent., acc. to present inf. Handles are ribbed, clay, in most, distinctly hard, and the single preserved rim (SS 10814) is a small rolled one, though not as small as that of SS 7663 (handle and neck fragment of jar of HOPTOZ - for POPTOZ - supposed by its context to be early 2nd).

¹ SS 10795, 10814, 10827, 10856, 10859, 10870-71, 10934-5, 10960.

- ① N 21: 4. Filling now thought to go as late as 250 B.C.
 ② E 5: 2 "Mixed 3rd - 2nd c" GRE list. SAH suggests 3rd.
 ③ K 18: 2, See Goldman *fastschrift*, pp. 94-95, pl. XI, 1-6.

SAH FROM ΣΑ, FILL OVER FLOOR OF SQUARE BUILDING

	fabricant	device	eponym	KT	SS	shape, etc.
Early Knidian	ΑΘΗΝΙ(ΩΝ)		ΝΙΚΑΣΙΕ(ΟΥΛΟΣ)	79	10850

	ligature MEN/ΠP K				10937	(retr.)
	" /ΠP KN				10824	
	(not read)				10817	

The two ligatures (second and third of the Early Knidian) are both present in the MSBF, and the first (SS 10937) is duplicated in H, Hell. Fill at 48-53/IB-IF, datable apparently in the third quarter of the 3rd B.C.

Among the Knidian proper, all eponyms ~~are duplicated~~ here listed appear also in the MSBF, and all stamp Types are duplicated there save KT 79 and 681.

Parioniskos Group	ΗΓΗΖΙΝΟΣ	SS 10844
	ΤΙΜΑΙΝΕΤΟΣ	10823

The second of these names is found in the MSBF, also in the Phaidon St. Cistern, South, in Section @, deposit datable earlyish in the 3rd cent. B.C. (No specific context dating for ΗΓΗΖΙΝΟΣ.)

SAH FROM ZA, FILL OVER FLOOR OF SQUARE BUILDING

<u>Chian</u>	HTHEIOZ	SS 10777 10796
	IKHEIOZ	10797

Both names found in the MSBF, and both are probably datable - according to other evidence, including context in Chios - in the first half of the 3rd B.C.

<u>Coan</u>	EYMH(AIOAZPOZ?)	10874
	HOEI(AZNIOS?)	10958

No dates established for these.

<u>ZH group</u>	I	10798 10798
-----------------	---	---------------------------

Thick early Rhodian shape, dark red clay with remains of light slip. A similar stamp on a broad Knidian-type handle in the MSBF (SS 12898).

<u>Miscellaneous</u>	AITEAAHEZ	10802	fabric rather Corinthian	<u>parallels</u> MSBF, Pella
	* APIETEIAHE, rose	10865	on <u>neck</u> frg*	
* No rim preserved. Clay like Chian or early Kn. On Rh. jars, no rose stamp of Aristides. In any case, name spelt spelled with A, not H. On Kn. jars, there is a <u>phour</u> . who spells as here.	AYE[	10858	fabric "Sikyonian"	
	B ?	10841	of. <u>Pnyx</u> , 234-5	FAP III
	A	10825	fabric rather "Sikyonian"	
	EPAZIOZ K (retr.)	10811	" " Knidian	E, 63/NA (early 3rd)
	OEY framed, retr.	10853	" off. Chian	
	AYK0Z (retr.)	10857	red clay, dark bits [mushroom rim]	M 18 : 10 (ca. 200)
	monogr. TE	10908		N, 4th c. ho (3rd qu. 4)
	incuse ring	10872	earlier fabric	
	not read	10820 10867 10890 10959	(whole handle) buff clay, light red core roughly made, brick-like clay fabric rather "Sikyonian"	

Note that for these also the context of parallels ranges from ca mid-4th century to ca. 200 B.C.

ON SAH IN THE MIDDLE STOA BUILDING FILL

The deposit was cited for dating stamps in the first SAH Hesperia article, see III, 1934, p.208, on the Hellenistic building fill in Section Θ - "the pottery and coins were almost entirely of the third or late fourth century B.C." - and is often referred to in suggesting dates for stamps in the catalogue of that article.

Since then, especially since the large number of new finds from the same fill were excavated in 1953, it has become clear that presence in this deposit indicated a more precise date for certain classes, i.e. for categories or groups otherwise known not to have started much before 200. Though since the ~~war~~ later dates have been proposed for the lower limit of the deposit, ~~the~~ the lower limit of the handles still appears to be before 180. This dating is mainly based on 1) independent context evidence for the names or actual stamp types represented in this fill, the bulk parallel being the large deposit found in Pergamon, which has been dated ca. 220-180 B.C.; and 2) the inner consistency of the group, and its distinctness from groups with known lower limits of ca. 150 B.C., in particular the handles from the construction filling of the Stoa of Attalos, and those found in Corinth.

No excavators' lists exist of the MSBF group as a whole. The total of about 1500 SAH covered by our studies is composed of the following:

1) Those listed in or before 1949 in the typed list of MSBF finds which was made I believe for GRE from the notebook list, Section Θ, pp.1452-8. From the ^{all Knidian,} list of 436 stamped handles, I now regard the following, as from intrusions (or otherwise irrelevant fill), and these do not appear in the SAH analyses and list by category:

SS 499	<u>duoviri</u> period	SS 887	Late Knidian
589	" "	890	<u>duoviri</u> period
591	" "	1008	" "
666	Late Knidian (1st BC)	1135	2nd quarter of 2nd or later
670	<u>duoviri</u> period	1151	ca. mid 2nd
757	2 nd half of 2nd cent. (?)	1266	<u>duoviri</u> period
870	ca mid 2 nd to 3 rd quarter	1267	Late Knidian

The rejection of 13 of these handles is endorsed by GRE, who investigated the particular contexts and found them all impure or otherwise irrelevant (e.g. too far north). The context of SS 757 had not been questioned by him; here the reading of the stamp is not very certain.

2.) Those excavated in 1953 in Sections ME and K, in fills described by the excavators as part of the MSBF, with certain exceptions listed below. The individual finding places of handles from Section ME were identified as Stoa fill in the notebooks; for K, a series of fills were identified by EV verbally, and the SS cards were stamped accordingly.

The numbers of these MSBF handles found in 1953, together with the particular fills in which they were found, have been listed; a copy is attached. Any individual items rejected by VG as intrusions are noted under the particular fill (see a couple on p.6 of the list); these do not appear in the category lists or analyses; in sum, out of more than 1000 handles, they are at present as follows, all Knidian:

SS 11826 (ME 135) duoviri period (KT 605)

12295 (K 1936) ΔΩΣΙΘΕΟΣ, term of ΑΣΚΑΗΠΙΑΔΗΣ (sometimes a phourarch) (KT 531)

12422 (K 2074) ΘΕΥΔΩΡΙΑΔΕΣ (KT 755)

12918 (K 2515) duoviri period (KT 2112)

12959 (K 2563) Late Knidian, after Sulla

13056 (K 2674) duoviri period (KT 486)

13096 (ME 666) duoviri period (KT 1578)

The K items all come from deposits described as "possibly disturbed" save SS 12918. The context of SS 13096 has been called "Stoa Terrace filling," but it was found during a cleanup, alone, and should probably not be listed at all.

It should here be remarked that 5 of the 7 Pontic handles deriving from Stoa and pre-Stoa fills have stamps dated by Grakov 122-70 B.C., but it now seems less probable that they are intrusions than that the dating of this sequence should be revised; see comment below on the Pontic in the fill.

In addition to the 7 individual handles rejected, two related fills at first listed were later rejected, and the rejection endorsed by EV:

"26-29/KE-AA, Fountain House Porch to Stepped Retaining Wall, Layer I" (K 2616-2642, SS 13005-31), and ibid. Layer II (K 2643-8, SS 13032-7). The upper layer contained, among other post-MSBF items, 3 Knidian handles of the 1st century B.C. (SS 13012, 13025, 13031); the lower (a small group) contained one or two handles slightly later than the MSBF. No fills as far south as this have been included.

Sorting ~~the handles~~ by category the whole lot (from @, K, and ME*), we find these figures:

<u>class</u>	<u>handles in MSBF</u>	<u>total at Agora</u>
Rhodian	885	ca. 4400(rough estimate)
Knidian	543	10000 at least
Early Knidian	39	213
Thasian	60	
Coan	53	ca. 170
Chian, including lagynos handles	23	
Coreyreaan(?)	7	
Pontic	6	42
Parmeniskos Group	5	
ZH Group	5	
Parian	2	
"Cretan"	1	
with Latin stamp	1	
miscellaneous	68	
	1498	

The Rhodian are about a fifth of the total of their class at the Agora, and the Coan nearly a third. The MSBF Knidian are only about a thirtieth of the Agora Knidian, but they are critical for dating the group as a whole as well as for

* Eight handles from A Section A, SS 4299, 4300, 4301, 4302, 4366, 4365, 3896-7, have typical MSBF stamps, and do not lower the dating.

establishing the earlier chronological sequence of their class.

The analyses of the Knidian by fabricant and eponym (copies attached) show the group to be largely a close one. 55 per cent of the handles are dated in 11 eponym terms, those of AAM(O)FE(NHE, EYKPA(THZ, ΘHPOKP(A(THZ), KAA(A(I(Z(TOZ, AEON, AYZA(NIOZ, MHTP(O(A(Z(POZ, NIKA(ZI(B(OY(AOZ, HOAI(O(Y(XHE (or -OZ), ZOK(PA(THZ, ΦIAIH(HOZ; the parentheses indicate the various abbreviations. This percentage would no doubt be increased by the types for instance of AHOAAENIOZ HIZIAAZ, in which no eponym name appears, and we do not know the terms. The inter-connection of names suggests that the 11 eponym terms succeeded each other without many gaps; the three more which each date as many as five handles (lower limit of the 11 terms is nine handles) are ΘEMIZ(T(SNA(TOZ, KAEITO(EN, and ΦIAIET(IZN; these probably followed or succeeded pretty closely the 11. Eponyms named on only one handle in the deposit may be earlier than the others, or they may be the very latest - little time for breakage, or some of them may turn out to be impurities in this deposit.

To help place the period of the 11 (plus) eponyms, there are two obvious groups of Knidian known to be ~~about~~ before about 150 B.C. which should be examined, those found in Corinth and those from the fill of the Stoa of Attalos. A combined list has been made of the eponyms from these groups, of which a copy is attached; see p.4 of this copy for omissions from the list of 1) certain eponyms seen to be old stuff when the Stoa of Attalos was built and when Corinth was destroyed, and 2) certain others which belong to the renewed (small scale) activity in Corinth of the late 2nd - early 1st centuries B.C.

In a fair number of the types in the combined list, the eponym is entitled phourarchos, marked @P. in the list; many more of the eponym names, marked in the list (@P.), occur on other types with the title. These phourarchoi should date 188-167 B.C.: cf. Fraser and Bean, The Rhodian Peraea, p.93, note 3, for agreement of Fraser that they were administrators under Rhodes during these years. We have on file with this title at least 48 different names, usually with a small number of examples; Fraser

thought it normal that such officials should have been changed say three times a year, and cf. practice in Priene (Inscr. von Priene, p.XIII); allowing for some repetition of names, and perhaps the identification of a few more phrourarch types, the 48 different names now known probably do indicate ~~xxxxxx~~ ^{about} that there were 63 terms from 188 to 167.

The title phrourarchos does not appear in types found in the MSBF. However, five of the eponyms have names, or abbreviations of names, which do sometimes appear with the title: APKE(ΣΤΡΑΤΟΣ), ΘΕΥΣΑ(ΝΤΟΣ), ΣΕΚΡΑΤΗΣ, ΦΙΛΙΠΠΙΟΣ, ΦΙΛΟΦ(ΡΩΝ). Save for ΣΕΚΡΑΤΗΣ and ΦΙΛΙΠΠΙΟΣ, these are present in the MSBF in a single example each, and some may be impurities. It is also quite possible that there were name repetitions between the phrourarchs and other eponyms in Knidos in the first half of the 2nd century, so that in some of our types where the title does not appear the official was a different man, not the phrourarch. However, it seems probable that the MSBF slightly overlapped the period when phrourarchs were named, extending for instance down to 185 B.C., in which case phrourarchs whose names do appear in the MSBF should be the earliest in the series.

Of the Corinth-SABF eponym list, those not marked ΦΡ. or (ΦΡ.) are likely to have served between 167 and say 140 B.C. We do not know whether these were appointed annually or more often, but it has been assumed that they were annual: note that the Rhodian eponym ^{on the stamps} was often explicitly called a priest (whether or not the priest of Halios), and priesthoods in Rhodes were apparently annual offices. We have about 26 names left over in the list, not phrourarchs, according to present knowledge, which may be assigned tentatively to this period. Certainly for most of these, eponym-fabricant name connections confirm the position.

The MSBF Knidian, then, suggest a date in the second decade of the 2nd century for the ^{lower limit of the} fill. ~~2001-100 stamp~~
 xxxxxxxxxxxxxx

A small number of Knidian handles have been published as from the Pergamon deposit. Of these, nos. 1269¹1272 (pp. 491-2) and no. 1284 (p. 494) are contemporary with the MSBF; no. 1270 is an example of KT 2060 (stamp of ΘΙΑΙΩΝ) duplicated in our deposit; the fabricant of no. 1269 is to be restored ΘΕΥΤΕΝΕΥ[Σ?] (in genitive) and the type is close to KT 695, present in the MSBF; both fabricants and both eponyms of nos. 1271 and 1284 are also there present; and no. 1273 is evidently an Early Knidian, close to SS 1302 of the MSBF. No. 1275 however is an early duoviri stamp (KT 1562, late 2nd B.C.); one must guess that it did not come from the deposit, though there is not (as there is in other cases) a statement to that effect. These are all the items clearly identifiable as Knidian.

The correspondence between the two big foundation fillings, at Pergamon and the Agora, is much more extensive for the Rhodian. These at Pergamon are 782 to our 885, and there are a great number of correspondences. A difference is that while the Rhodian at Pergamon are mostly close together in date, those from the MSBF include a good many datable in the earlier third century. A difference more interesting for the lower limit of the MSBF is that a few Rhodian eponyms present in the Pergamon deposit do not appear in the MSBF. These are as follows:

name	no. of ex. in Perg. deposit
ΑΡΒΕΤΡΑΤΟΞ	5
ΑΝΑΣΙΒΟΥΑΟΞ	1
ΑΡΑΤΟΘΑΝΗΞ	8
ΑΡΙΞΤΕΙΑΑΞ	11
ΑΡΙΞΤΟΔΑΜΟΞ	21
ΑΡΙΞΤΩΝ	19
ΑΡΧΙΑΑΙΑΑΞ	5
ΞΕΝΟΘΩΝ	4

Absence from the MSBF cannot be explained by stoppage of trade between Rhodes and Athens during these years, because we have handles in our collection dated by all these names, some from ^{consistent} post-MSBF deposits.

It happens that none of these eponyms is known from inscriptions. There is however a general indication of their date in the fact that all are known on handles with secondary stamps set in the common way at the attachment of the handle to the neck of the jar. The practice of applying these was just beginning in the MSBF period. Only one appears, SS 12717, with small rose and no letters; the main stamp is not preserved, but this secondary stamp is known only on two handles with stamps of ΔΑΜΟΚΡΑΤΗΣ, and, apparently from jars of ΔΑΜΟΚΡΑΤΗΣ, on two handles probably both naming the eponym ΚΑΒΥΚΡΑΤΗΣ; ^{in circular stamps with rose, like those of Δαφνοκράτης} the rose secondary stamp is an early one, dated before about ¹⁷⁵ ~~225~~ B.C. by context at Tarsus. Of eponyms named in the MSBF, apparently only two others, ΘΕΑΙΑΝΘΟΣ and ΝΙΚΑΖΑΓΟΡΑΣ, sometimes occur with secondary stamps. Four secondary stamps are published from the Pergamon deposit (see p.484). Four there and one in the MSBF are to be compared with the considerable quantity datable later in the 2nd century, 624 having been recorded by us in Alexandria from the Museum collection alone. Perhaps the practice started with Rhodian expansion in or soon after 188 B.C.

Several of the eponyms common to the Pergamon deposit and the MSBF can apparently be identified with officials known from epigraphical or historical texts to have functioned in the early 2nd century. An eponym ΑΡΧΙΑΜΟΣ dates an inscription in Caria, which did not come into Rhodian possession until 188 B.C. A ΘΕΑΙΑΝΘΟΣ was priest of Athana Lindia in 188; we may suppose he became priest of Halios shortly thereafter, especially as he came from a distinguished family. A jar dated by ΝΙΚΑΖΑΓΟΡΑΣ has on its endorsing stamp (of ΑΡΧΕΙΜΕΝΟΣ) beside the usual dolphin a pellet which has been taken for a pomegranate, and (interrupting some of the letters) a Rhodian rose; as the pomegranate is a regular symbol on coins of Side, it is possibly not too fanciful to associate this combination with the victory of the Rhodians over the Phoenician fleet of Hannibal off Side in 190 B.C. (C.A.H. VIII, p.221). ^{above} ΝΙΚΑΖΑΓΟΡΑΣ has been listed as an eponym occurring with secondary stamp; in this case the majority of the secondary stamps are to be

⊗ A duplicate of this stamp of ΑΥΓΕΙΜΕΝΟΣ was found in the MSBF (SS 684)

associated with the later homonym (of toward 150 B.C.), but a jar of ΔΑΜΟΚΡΑΤΗΣ with secondary stamp Α (in the Alexandria museum) ^{evidently} very ~~probably~~ names this earlier ΝΙΚΑΣΑΓΟΡΑΣ. [⊗] Fabric of the MSBF handles naming ΑΡΧΙΔΑΜΟΣ, ΘΕΑΙΑΗΤΟΣ, and ΝΙΚΑΣΑΓΟΡΑΣ accords well with a date in the early 2nd century.

Of the Thasian present in the fill, certainly over two thirds are datable before the middle of the 3rd century, including 7 before ca. 340 B.C. The latest handles, probably late 3rd to beginning 2nd B.C., seem to be the following:

name	no.
ΑΡΙΣΤΟΚΛΗΣ ΘΑΕΜΑΧΟΥ	SS 12804
ΑΡΙΣΤΟΜΗΛΗΣ	12961
ΑΡΙΣΤΟΘΕΩΝ with caduceus	723
ΗΡΑΚ[ΛΕΙΑΝΟΣ] with club	13040
ΝΑΥΣΙΚΥΛΗΣ	11724 11850
ΗΥΘΙΩΝ ΙΚ	11668
ΤΕΛΕΣΙΝΟΣ	11956 ^g

There seems to be no reason to date these later than the beginning of the 2nd century. It is true that an ΑΡΙΣΤΟΚΛΗΣ ΘΑΕΜΑΧΟΥ who was a theoros of Thasos has been dated plus or minus 140 B.C., however this may have been the grandson of ours, since names and patronymics alternate and repeat in the lists of Thasian theoroi. The 14 Thasian in the Pergamon deposit include handles naming ΑΡΙΣΤΟΜΗΛΗΣ (3, of which one matches SS 12961) and the ΗΡΑΚΛΕΙΑΝΟΣ of SS 13040; note that the type of SS 13040 seems to be a recutting of that of SS 12961, so they must be close together in date. A duplicate of SS 723 is SS 10266 from the Komos eastern. A duplicate of SS 11724 is SS 13185 from the South Stoa building fill, where the greater part of the handles were contemporary with those from the MSBF.

A parallel for the two Parian, which both have omega for omicron in the ending of the ethnic, appears in the Pergamon publication (no. 1275), but its precise find-

⊗ It happens we have records of 5 whole jars dated by the name Νικασαγόρας. 3 have endorsing names present in the MSBF and/or the Perg. deposit. The other two endorsed by Ευπάρκω (with secondary stamp) and Διοφάντος, are clearly later in shape.

There remain two classes for which the MSBF provides a surprising but probably acceptable early date.

One is present in a single example, SS 12705 with stamp C-S, Latin letters, on a fragment of a jar of eastern type. ELW has no other Latin stamps of date thought to be as early as this; but she has on the other hand nothing at all like it save SS 1450 with the same reading, found in a disturbed filling in the Middle Stoa area. She is prepared to accept the early date, and the two examples published as have been so dated in "The Canaanite Jar."

The final class is the Pontic, which in the MSBF are all of the variety attributed by Grakov and others to Sinope. It has been remarked (see above, p.2) that the Pontic in this deposit, if dated according to Grakov, are consistently too late for it: of 6 handles from attested parts of the fill, one, (SS 12722), is too incomplete for its eponym to be identified, a second, SS 11813, falls in Grakov's Class IV (ca. 180-150 B.C.); but the other four, SS 12073, 12313, 12484, 12485, are of his class VI, called 122-70 B.C.; a fifth so dated by him may be added in SS 12108, from a pre-Middle Stoa fill. Similarly out of place, apparently, is the date of Grakov's VI in the case of SS 13715, which must be attributed to it, and which comes from a stratum in K in which the other handles at least are all datable before about the middle of the 2nd century. Further, if the date attributed to this class were correct, one would expect to find the odd example in a Sulla-destruction fill, whereas none have been found in any of these. One Agora Pontic handle, SS 10901, has a context, Square Building construction fill, which corresponds better with its date according to Grakov, end of the 4th century to ca. 270 B.C. (his earliest group), but even here there seems to be a discrepancy of about a quarter of a century in termini, if the Square Building was constructed in the third quarter, as would be suggested by the handles accompanying SS 10901, and ~~xxx~~ ~~xxxx~~ by the date of the administration of Lykourgos.

From what I know of his arguments, it seems likely that while Grakov's

sequence is right or nearly so, being based on a close study of the inter-connection of names many of which have patronymics stated, and of patterns of stamping ^{by} which individuals and closely connected groups can be isolated and set in order, his absolute dates may be too late. It is worth remarking here that the eagle and dolphin of Phyx 190, of which a photograph was published in Hesperia Suppl.VIII (pl.20,13) according to E.S.G.Robinson (letter of 17.VI.49) "should by all appearances be round about 400, or at latest first half of 4th century;" the full statement of the context of this item is "Assembly Place, filling of Period III, immediate context as late as 2nd A.D. The ~~immedi~~ stamp belongs to Grakov's Group I, which he dates end of 4th to ca. 270 B.C. (see above). A second example of the same group, Phyx 189, with the same emblem, comes from "Assembly Place III, surface, disturbed." Though disturbed, these fills no doubt contained largely material of the late 5th - first half of 4th century. As one more straw, note that SS 11527, which names an eponym of Grakov's Period VI, has a radiate head of Helios which one might like to associate with Rhodes' help to Sinope at the time of the siege in 220 B.C. by Mithradates king of Pontus.

In view of the fact that four examples of the latest class were found in the MSBF, and a fifth in a pre-Stoa filling, it seems likely that the end of the series fell somewhat before Grakov's proposed 70 B.C. The reasonable occasion is the capture of Sinope in 183 B.C. by Pharnaces I, son of Mithradates; he moved his capital to that city, and no doubt introduced administrative changes.

The 6 Pontic handles from the MSBF which I should like thus to redate are to be added to the 7 Knidian which (see above, p.2) I must exclude from the pure MSBF if its lower limit is that proposed in these pages, i.e. the second decade of the century. 9 of these handles (4 Pontic and 5 Knidian) would pull the date of the fill down not to 150 but to 122 B.C. or later. The other two Knidian are slightly later than the bulk of that category in the MSBF, but in fact it is not at all certain that they date after ca. 180.

The later dates proposed for the fill seem to have depended first on four coins found in 1933, listed in G.R.E.'s report of July 17, 1950, p.2:

Athens, NS, ca. 172 B.C. (Mar.9, 1933, #1)

Thessalian Confederacy, 196-146 B.C. (?) (Mar.9, 1933, #3)

Athens, NS, 196-187 B.C. (Mar.28, 1933, #20)

Delos, Athenian cleruchy, after 166 B.C. (June 1, 1933, #3)

M.T reconsidered these for me in October, 1955, and said that dates of the NS coins are being revised, and that the first of those listed has at present no terminus but 196 B.C. The "Delian cleruchy" coins she believes are really issues of the Athenian mint, and this particular coin (the last one listed) according to her present views might be datable in the 3rd century. (Note another "Delian cleruchy" found in E, cistern at 67/IH, a deposit recently called by GRE "end of 3rd century," of which the handles correspond pretty closely in date with those of the MSBF, except that the Rhodian SS ~~2225~~ 7863, of KAAA12, and SS 7898, naming the eponym ZENON, are probably slightly later, belonging to the group found in the Pergamon deposit but not in the MSBF.)

Apart from the coins, GRE tells me a fragmentary Megarian bowl (K 2705, P 23095) found in a settling basin in front of the west end of the north front of the Heliaia (west of the water clock) is to be dated not earlier than 150 B.C. The position is somewhat removed from the Stoa, but presumably would have been levelled up before the Stoa project was finished. I do not know whether the basin might have been kept available as a water supply during the construction, or whether someone might have gone down into the fill in some later investigation, shovelling it back afterward. I do not identify a group of handles found just over the position of the settling basin, but note that the large lot found at 28/AF, slightly to the NW, included SS 12918, Knidian of the duoviri period, suggesting possible disturbance in the neighborhood.

"I ought to know by this time that when a fact appears to be opposed to a long train of deductions it invariably proves to be capable of bearing some other interpretation." *John August Edward Holmes "A Study in Scarlet" p. 89*

The majority of the stamped handles in the South Stoa construction fill are contemporary with, if not duplicates of, those found in the MSBF, but SS 12190, 13170, and possibly 12632, are post MSBF though still certainly before the middle of the century. The latest handles associated with the construction of the South Stoa (II) ^{is one of} are three found in 1956 "from below floor of South Stoa II in test pit against back wall in east half of building, XXX, p. 5980," T 3600-3602 (not yet catalogued). T 3601 names the ^{Knidian} eponym ΕΥΠΑΡΟΠΑΞ: this eponym does not appear in the combined Corinth-SABF list (see above), but does in fills which cannot be much later, and is shown to be close in date to those in the combined list by eponym-fabricant name connections; he must date not far from 140 B.C.

There are a number of fills in Section K which have not been included in the present lists and analyses which nevertheless appear to according to their SAH to be contemporary with the MSBF. One of these is the "intermediate strosis" or ramp at the west end, probably, though it has a single eponym not in the MSBF. A list of these fills, and of others in the Section that are slightly later but still before the middle of the century, if we check the SAH with MSBF and Combined lists, will be available.

For the donor, I do not know whether Pharnaces I has been suggested. Cf. Restovtzeff, SEHNW, p. 630: "Not less significant of Athens' commercial relations are the honors conferred by her on Antiochus IV, Ariarathes of Cappadocia, and above all Pharnaces of Pontus, and the gifts received by her from them. The last of these, it is to be borne in mind, became about this time master of the two greatest commercial ports on the southern coast of the Euxine, Amisus and Sinope, both very important centers of the grain trade, and both closely connected with Athens in the past." On the gifts received by Athens from Pharnaces, see Durrbach, Choix d'Inscriptions de Delos, Paris 1921, p. 97, no. 73, an Athenian decree in his honor and that of his queen Nysa. He had agreed to pay the city

a sum of money in annual installments, but because of other obligations and difficulties had been unable to keep them up. They praise him as a benefactor and hope to get something on account; they assure him that the honors paid to him will be no less than those paid to "the other kings" and his glory will be assured like that of other benefactors of the city. The inscription is now dated $\text{IX } 160/159$ (formerly 172/1). Durrbach remarks that if one looks in his reign for an occasion when he would have had particular occasion and desire to pose as a benefactor of Athens, it would be about 183. A large initial payment might have taken care of the big terracing and foundation job; delayed subsequent payments might account for the piecemeal execution of the project, the way the East and South Stoa are tacked on, though one would suppose it was the complex as a whole which had been intended from the beginning to replace South Stoa I.

Noting that Pharnaces had in 183 acquired two great centers of the grain trade, may one suggest that what he replaced by his great new building was the Alphetopolis? There seems to be a fair possibility that the Alphetopolis was the same building as the Long Stoa, and certainly both South Stoa I and the Middle Stoa would qualify for this epithet. I know that the position is not that attributed to the Long Stoa in Judeich's plan, p.344, but several other buildings are also out of place on that plan. Naturally the buildings could have served also ~~for~~ other purposes, such as shelter from the Heliaia in case of rain, or "a dining room for Section K" placed in the Long Stoa by Praxagora, the passage quoted in connection with South Stoa I by HAT, Hesperia XXIII, p.45, note 15.

With encouragement, I think this theme could be developed.

Stimulating picture of Pharnaces, SEHAW. pl.IX.2.

SAH from MSBF 1953 - INTERIM REPORT

A running record was kept of Knidian stamp types catalogued from Sections MZ and K in 1953 - beginning on or before February 24 - since most of them presumably come from the Middle Stoa building fill. An analysis based on this record shows the following figures:

	<u>MZ</u>	<u>K</u>	<u>Total</u>
I. Handles which I think date in the 1st quarter of 2nd:	41	150	191
II. Later handles, still possibly all before 150 B.C.:	3	16	19
III. Handles of 2nd half of 2nd to early 1st B.C.:	2	4	6
	<u>46</u>	<u>170</u>	<u>216</u>

No detailed analysis is given of the large group of early handles. The fabricants and eponyms have been listed, with figures (p.2). Note the large number of the fabricants EYBOYAOZ, OPAZEN, and NIKAZELBOYAOZ, of the eponyms HYKPATHEZ, OHPOKPATHEZ, NIKAZI-BOYAOZ, and especially HOAIOYXOZ. No investigation of the context has been made for these handles of Group I, some of which of course do not come from the undisturbed MSBF.

For Groups II and III, the types are analyzed (pp.3,4), and I have investigated in the notebooks the context of examples (see p.4).

Investigation in MZ notebooks shows that the three handles of Group II come from Roman context (see 1 and 5 in list p.4). The two handles of Group III come, the one from a martyra (see context 9), but the other, MZ 666 (SS 13096) apparently from the MSBF itself; this latter is datable in the late 2nd or early 1st century B.C.

A late Pontic handle has also been noted from this section: MZ 312 (SS 12073), from "S area 3, Layer III, strosis b." According to Grakov the stamp is to be dated 122-70 B.C.

Investigation in K notebooks shows that the handles of Group II come from the following deposits:

K 1936: "Hell. fill possibly disturbed by drain," listed as ④.

K 2528-31, 2535-6, 2538-9: "Martyra in Fountain House Porch, Layer 3," listed as ②.

K 2573: "Martyra over east end of water basin Top and trench for drain B." ⑥

K 2620-21, 2626-27, 2635: "Fountain House Porch to Stepped Retaining Wall, Layer 1." ③

K 2664: "Fill over Stepped Retaining Wall," listed as ⑦.

And that the handles of Group III come from the following deposits:

K 2095: "West of "steps" to 27 meter square: top of Hell. fill, working level." ①

K 2520-21: "Martyra in Fountain House Porch, Layer 2," listed as ② bis.

K 2674: "Hell. fill S of Middle Stoa Piers 5 and 6. Possibly disturbed." ⑧

Two late Pontic handles have been noted from this section: K 2146-7, both from "Hell. fill over water basin N of drain B Working floor to ca level of bottom of drain. These also belong to Grakov's Group VI, which he dates 122-70 B.C.

From this preliminary investigation - made without availability of catalogue cards, or existence of a deposit list, - and covering only a small part of the material - my impression is confirmed that the handles as a whole are datable little if any later than the first quarter of the 2nd century, the provisional date of Group I. I would be glad to have comments on the listed contexts, most, at least, of which seem to allow of detaching the later handles from the Stea fill. It is true that the Knidian are not even the largest single class in the fill, but they are the most indicative, since in Athens as a whole they tend to increase after the first quarter, whereas the Rhodian, the largest class among the handles catalogued this year from MZ and K, almost disappear after that time. On the Rhodian, it is interesting that in checking for photographs needed we found that a large number of the stamp types on the new handles were duplicated from the deposit at Pergamon which has been dated 220-180.

C. Function of persons uncertain:

ΘΕΥΔΑΜΟΣ	2664 ⁽⁷⁾	13046
ΣΦΑΙΡΟΣ		

Altogether: 19 handles later than the bulk of the Knidian, but still all possibly pre ca 150. The terms of ΑΓΑΘΟΚΑΗΣ and ΚΑΕΥΜΒΡΟΤΟΣ seem the most dubious as before 150, - and note that there are two there from MZ, all of which come from Roman context, as investigated in the notebooks 5.vi.53; see description of contexts, next page.

Notes on 1953 KNIDIAN catalogued from Sections K and M2

Context of handles in II and III:

- 1 M2: Horos - Terrace tr., Layer II, Road (mid-Roman context)
- 2 K: Martyra in Fountain House Porch, Layer 3 2 bis Ditto, Layer 2.
- 3 K: Fountain House Porch to Stepped Retaining Wall, Layer 1
- 4 K: Hell. fill possibly disturbed by drain
- 5 M2: Civic Offices . . early Roman context
- 6 K: Martyra over east end of water basin; top and for drain B
- 7 K: Fill over Stepped Retaining Wall.
- 8 K: Hell. fill south of Middle Stoa Piers 5 and 6; possibly disturbed.
- 9 M2: S area 3-4 (Layer ?) Martyra
- 10 K: West of "steps" to 27 meter square: top of Hell. fill, working level
- 11 M2: Area T 15 Stoa Terrace filling

III. Handles datable later than 150 B.C.:

fabricant	device	eponym	duoviri	K	M2	SS
(EHIFONOS)	cluster	(AIIAZ)	APTEMEN	2521	2 bis	12921
AIOZKOYPIAAZ	boukranion	EPMSN	APIZTOKAHE (APIZTOBOYAOZ MEAAANTAZ)	2674	5	13056
EPMSANTOZ		EPMSN	(APIZTOBOYAOZ MEAAANTAZ)		136	11827
TIMOENOS	device, unid.	GAAINBPOTIAAZ	not named	2095	14	12438
MOEKISH	anchor, pt. r.	IEPOKAHE	" "	2520	2 bis	12920
(AIOZKOYPIAAZ)	boukranion	(HIZINOS)	KAPNEAAAZ EYBOYAOZ		666	13096

Handles naming duoviri, or bearing companion types of duoviri stamps, are to be dated in the late second - early first centuries B.C. The eponym IEPOKAHE is the commonest in Group B, hence presumably about 125 B.C. GAAINBPOTIAAZ I should date in the third quarter, perhaps not much after 150.

(Where identified by listing the duoviri in parentheses.

The foregoing alphabetical series includes the names on stamps datable after about 340 B.C. The following have stamps of the same period as the above, the names having not yet been identified: SS 783 (triskeles), 907 (hand), 1139 (floral device, perhaps grapes), 1530 (device not made out), 11706 (horn), 11870 (vase, Type VIII?), 12312 (cornucopia?), ~~12342 (protome of stag)~~.

The following are datable before about 340 B.C.: SS 679 (unread, with goat), 725 (THAEANHZ- ? with helmet), 750 (APICTOKPATHZ-NOZZOZ with wheel), 1036 (ΣATYPOZ-AAHA, no device), 11672 (HPETIZ- ? ,vase, Type VI), 13042 (unread, with protome of stag).

Of the stamps in the alphabetical list, may guess that the following are of the second half of the 4th century: those naming AAKEIAHZ, APICTOΦON (type with horn), HPAKAEITOZ, ΘAEEN, KABOΦON, KRINOMENHZ?, NAYZEN, and ΘIAIZKOZ; altogether 8 handles.

And that the following are of the late 4th - early 3rd: those naming ΔΕΙΝΩΙΑΣ, ΗΡΗΣΙΝΟΑΙΣ, ΗΡΟΦΩΝ (type with sea serpent), ΑΥΞΑΝΑΡΟΣ, ΣΑΤΥΡΟΣ (?), Θ[ΑΝΟΚΡΙΤΟΣ], ΘΕΙΑΝΗΜΟΣ. (9 handles)

And that the following are of the first half to middle third: those naming ΑΙΣΧΡΩΝ, ΗΡΑΚΛΕΙΑΗΣ (types with bow and caduceus), ΝΙΚΑΝΩΡ ΗΓΗ(, ΝΙΚΟΔΗΜΟΣ ΤΙ(ΜΟΚΡΑΤΕΟΣ), ΝΥΜΦΩΝ ΚΑΕΟ(, ΝΥΘΙΩΝ ΑΥ(or ΑΥ((II. VII), ~~ΣΚΥΡΩΝ~~ ΣΙΜΑΛΙΩΝ ΑΘΗ(, ΘΙΑΣΝΙΑΗΣ ΣΙ(. (11 handles).

And that the following are of the middle to second half of the third: those naming ΑΝΤΙΩΝ, ΒΟΥΛΗΚΡΙΤΟΣ ΑΙ(ΣΧΡΙΣΤΟΣ ?), ΗΡΑΓΟΡΑΣ, ΗΡΟΦΩΝ ΒΑ(. (4 handles).

And that the following may be as late as early 2nd B.C.: those naming ΑΡΙΣΤΟΚΛΗΣ ΘΑΕΜΑΧΟΥ (see I.G. XII, 8, 293, 29, a theoros of this name), ΑΡΙΣΤΟΜΗΛΗΣ, ΑΡΙΣΤΟΦΩΝ (type with caduceus), ΗΡΑΚ[ΛΕΙΑΗΣ] (type with club), ΜΑΥΣΙΚΥΑΗΣ, ΝΥΘΙΩΝ ΙΧ, and ΤΕΛΕΣΤΗΝΩΡ. (8 handles). Parallels exist in the Pergamon deposit for the type naming ΑΡΙΣΤΟΜΗΛΗΣ, and for a type of apparently the same ΗΡΑΚΛΕΙΑΗΣ (no.1262), another of apparently the same ΑΡΙΣΤΟΜΗΛΗΣ (nos.1257-8). The type of ΑΡΙΣΤΟΦΩΝ is paralleled in the Komos cistern (SS 10266). Note that the club type of ΗΡΑΚ[ΛΕΙΑΗΣ] seems to be a recutting of the ~~ty~~ club type of ΑΡΙΣΤΟΜΗΛΗΣ.

It should be remarked that parallels exist in the Pergamon deposit also for our type of ΝΥΘΙΩΝ VII with pilos and star, and for a type of ΣΙΜΑΛΙΩΝ ΑΘΗ((no.1267, wrongly restored). Both of these seem to me to date in the third century, not appreciably later than the middle. The deposit of course also contains one or two Rhodian 3rd century leftovers, such as a type of Mikythos.

15.VII.55

Fabric of the handles: Those with cluster, and esp. the large group with uncertain device, do not look earliest Knidian; the top is not v. long, and it arches a little; handle thickish, rims rather Rhodian.

MIDDLE STOA BUILDING FILL : P O N T I C

ΑΝΑΤΟΥΡΠΙΟΣ(?)	[star or Hel.head]	ΜΗΤΡΟΔΩΡΟΣ Ο ΑΘΗΝΙΝΙΟΥ	VI	12313

Not sure of function of person named in SS 12722, because name, with patronymic, stands first, followed by title, and it is not certain the stamp ended below the title.

Grakov dates his Period IV 180-150 B.C. (see p. 138), and his Period VI 122-70 B.C. These dates are puzzling for handles found in MSBF. It is true that in some cases, the Black Sea handle is not the only anomalous piece from a particular fill, but sometimes it is:

(SS 1112-11843)			
SS 11813	Period IV	In same fill, SS 11826, Knidian of <u>duoviri</u> period.	
12073	VI	In group SS 12054-78, <u>no other anomalous</u> item noted.	
12108	VI	Group SS 12098-12115, <u>no other anomaly</u> (most or all 3rd c considered pre-Stoa fill)	
12313	VI	SS 12197-12430, included two slightly late Kn., 12295, 12442 (note: large)	
12484	VI	SS 12441-12538, <u>no other anomalies</u>	
12485	VI		
12722	?	SS 12635-12919 (large), included SS 12705 (C.S) 12862 (Rh., ep.Arist-eidas) 12918 (Kn., duoviri)	

Black Sea handles being rare in Athens, we have almost no other context evidence for them. An exception is SS 10901, from the Square Bldg construction fill. The stamp on this places it in Grakov's Period I a, late 4th century B.C. Here the context confirms his dating. The only other of this class found in good context seems to be SS 10866, in ZA ostr. fill, but the reading, hence dating, of this is not clear. In general, there seems to be better evidence for the dating of the beginning of Grakov's ^{period} than for the latter part, which apparently is pinned only by devices matching those on coins, and by Persian names. Could all be telescoped to end with conquest by Pharnaces in 183?

G.F. is George Forrest of Wadham College, Oxford. Ch numbers are of stamped handles found in Chios.

MSBF - notes on analysis of CHIAN

with notes on other context

Fabric: handles of fine red clay usually with a light slip laid on a rough surface. Take to be earliest those marked EPM or EPM2, parallels for which have been found in early third (Ch 5, from Kophina well stratum 2) and possibly late fourth (SS 8546, the dep. is called 4th BC by HSR in n.b.) centuries B.C. (No ^{record} other examples of a stamped Chian handle earlier than 3rd B.C.). The handles are thick but not round in section, and the red of the clay has a good deal of yellow in it. Handles of HFHZIOY close to those of EPM, though smaller, and clay and slip a little less yellow; one of his handles is SS 9989 from the Komos cistern. IKSZIOY probably follows here; there is variation, SS 1470 resembling HFHZIOY handles, while the other two have a dark surface under a sort of bloom slip and are nearer round in section; of 60-odd examples on file, some are perhaps considerably later than others, but 3 in any case were found in the Kophina well, top stratum, for which J. Anderson's last date seems to have been ca. 275-250 B.C. ~~the latter~~ ^{the latter} perhaps follows here, then APIZTO/PEYOY: the two handles of ~~the~~ are rather large, the section nearly round, the thick and slip not yellow, its surface rather rough and grainy. AIONYZ[probably fits in about ~~the~~ ^{also} ~~NOTEZI?~~ and HOZEIAZNIOS? here, SS 12754 with stamp of AN(E)AAEY(Z) looks too late for the MSBF: nearly the whole handle is preserved, the RH was about .225, like that of P 3402 from Group E, and it arches a bit, like that; it is nearly round in section, small, with ash grey core and powdery light slip. The jar handle of MOY(has a decided lateral twist. SS 12697 with monogram or abbreviation is distinctly less thick than the others, but clay and slip are characteristic, I think not of the earliest period of stamped jars.

So a number of the Chian from MSBF are third century or even earlier, while those we may guess to be close to the date of actual estr. of MS are not precisely dated, and one handle, SS 12754, seems too late for the deposit, perhaps as late as Group E. Note this latter comes from the big lot in which several other contaminations have been detected, including a duoviri Knidian.

27.VIII.55

MIDDLE STOA BUILDING FILL : C O R C Y R E A N (?)

Seven handles, listed here in numerical order:

- SS 575 (e) round same as
dim stamp with monogram? probably resembling that of Corinth C 33-99
- 745 (e) CQ, retrograde in round stamp
- 786 (e) seven-rayed star, in round stamp
- 1140 (e) KP, in rectangular stamp with rounded corners
- 1662 (e) O in triangular stamp
- 11825 (M2) ΑΡΑΘΙΝΟΞ, in narrow stamp
- 13059 (K) CO in round stamp

Broad handles with fairly distinct central rib inside and out. The rim where preserved (as on SS 575) lies out on the handle. The inside of the upper handle attachment where preserved (SS 575, 786) shows marked vertical finger impressions. Four of the seven are stamped on or near the lower attachments: SS 745, 1140, 1662, 13059). Clay usually quite fine, usually buff/(greenish or yellowish) but sometimes pink (cf. SS 575, 1140). These features, of shape and clay are characteristic of the class as a whole.

Dates from other contexts: SS 575, 1662, and 13059 have parallels from Corinth, ~~xx~~ and ~~xxxx~~ many of this class have been found there; it should perhaps be remarked that the context of Corinth C 28-32, parallel for SS 13059 is called "Odeion 1st AD," but the handle need not be so late. The series of jars is known as early as the 6th BC, even marked fragments being known as before 480 (Mary Campbell's frog stamp, ~~xxxxxx~~ with A incuse ~~xxxxxx~~ also P 24879 from Gutterstone Well). Stamps with one or two letters occur in the 2nd half of the 4th to early 3rd BC (SS 11353, from N 4th century Hole; SS 3016 from B well at 33/KA; SS 5479 from H9 well at 68/MB; SS 10048, neck, from NN, Pit at 61-63/H9-E; SS 13913 from Square Bldg Fill; and note the jar P 6395, no stamp preserved, from I' cistern at 109/AB, 3rd quarter of 4th.

Beside ΑΡΑΘΙΝΟΞ, the only whole name in this file seems to be ΗΙΣΤΟΞ. ^{which is found in Corinth} Present context is not absolutely tight for this uncommon type, since it comes from a part of MSBF not quite reliable; SS 11826 is a Knidian duoviri handle.

29.VIII.55

MIDDLE STOA BUILDING FILL : P A R M E N I S K O S G R O U P

Three handles.

SS 12902 (K) NIK/TOY

779 (G) TIMAI/NETOY

11718 (ME) monogram combining A, R(?), and T: 

All three of these handles have the characteristic rim with sharp outer edge. The clay is micaceous, buff with ^{taupe} gray core (12902), or red; SS 11718 is blackened on the surface.

Examples of this class have been found in deposits of the early third century and perhaps earlier. There is no present evidence suggesting for these three a date later than the early 2nd. A parallel for SS 779 comes from the fill over the floor of the Square Bldg. (SS 10823).

30.VIII.55

MIDDLE STOA BUILDING FILL : E A S T E R N TYPE JAR WITH L A T I N
STAMP

SS 12705 (K): fragment showing angle of shoulder of jar and upper(?) handle attachment just below(?) the angle, stamped G S in circle. Hard dark red clay with white bits. White slip, rather thick and greenish.

For the shape, cf. P 9398 (Y, cistern at 20/MB, to beginning of 2nd BC according to SAH - VG dep.41), but the slope above the angle in the fragment is too steep; cf. also the torpedo jars of the ~~early~~ late 2nd - early 1st B.C., but they have no angles. We lack comparative material.

Note that SS 12705 comes from a part of the deposit that is described on its SS card (in LT's hand?) as "prob. dist." It is from the big group 12655-12919 in which there are several items that are too late, including a duoviri handle.

My recollection that ELW could not match early 2nd BC for a Latin stamp. But possibly they began them earlier in some of these Phoenician or whatnot ports.

30.VIII.55

MIDDLE STOA BUILDING FILL : " C R E T A N "

SS 667 (9)]HZ ? cf. ΘΕΥΚΑΗΣ, but the arrangement in Herm.117,404
does not seem to be the same

No other context for ~~these~~ this class, save that Tarsus 95 (name not read)
comes from a late 3rd - early 2nd B.C. deposit, thus corresponding well with
MSBF. The fabric somehow looks rather earlier.

Identification as Cretan suggested by J.G.Milne, Catalogue General du Musée
du Caire, XVI, 1905, p.124.

anyway at Numis.Soc.

Investigate whether they are Samian, suggestion I think of Mr.Noe:

see Percy Gardner, Samos and Samian Coins, London, 1882. Forepart of galley
very usual. Plutarch says they branded Athenian captives with it (Perikles 26)
stamping them as ~~state~~ state property. Athenians marked theirs with owl.

file

(Taken from ~~the~~ card of SS 667, 2339.)

30.VIII.55

MIDDLE STOA BUILDING FILL : P A R I A N

SS 1119 and 1359, both @, both reading ΠΑΡΙΩΝ originally.

(Is this reading a bit later than with the omicron? cf. context below)

Context other than MSBF:

NM, well at 65/MF - SAH are mid-second (SS 10084) (ΠΑΡΙΩΝ)

Corinth; C 34-1641 (neck) (ΠΑΡΙΩΝ)

AA, cistern at 6/AF - 3 other SAH, seem contmp. with MSBF (SS 8085)
(ΠΑΡΙΩΝ retr.)

ΔΔ, Komos cistern SS 10263-4 (ΠΑΡΙΩΝ @P retr.
ΠΑΡΙΩΝ @IAO retr.)

Fabric: note Agora examples are all smallish, some distinctly small.

Despite the omega, cf. above, seems no real reason to date later
than ca. 180 B.C.

10.V.55

MIDDLE STOA BUILDING FILL: RHODIAN

Unread Rhodian stamps from this deposit ⊕

Circular stamps with rose:

SS 519, 557, 680, 675, 678, 696, 1466, 1468, 1472, 11617, 11832, 11837, 11873, 12087, 12123, 12216, 12283, 12285, 12373, 12378, 12416, 12517, 12522, 12637, 12651, 12730, 12748, 12778, 13044.-

Rectangular stamps without device:

SS 547, 553, 569, 572, 660, 769, 1009, 1289, 1337, 1476, 11694, 11701, 11792, 11793, 11823, 11839, 11969, 12025, 12075, 12084, 12085, 12088, 12089, 12238, 12239, 12250, 12265, 12270, 12335, 12349, 12354, 12355, 12357, 12379, 12449, 12498, 12500, 12461, 12504, 12646, 12681, 12709, 12764, 12768, 12805, 12770, 12824, 12852, 12860, 12984, 13904, 13911, 13984.-

* Note this sec. stamp (rose) appears on stamps of Δαφιοκράτης (see sec. stamp file) and, apparently from jars of Δαφιοκράτης, on stamps naming Κασσιόκράτης and Κλευκράτης, eponyms: see Talos № 75 A and B with context of mid. 3rd to early 2nd c. B.C.

For sec. stamps in Pergamon, see p. 484.

⊕ Also unaccounted for in the analysis is SS11794, K 1695. The SS card has not been found, there is no reading in the notebook, and we have not been able to make a reading from the leica contact there, but can see that it is a round stamp with rose, double circle, 3rd cent.

MIDDLE STOA BUILDING FILL : MISCELLANEOUS UNCLASSIFIED

- SS 496 (a) AA joined (or AA retr., or monogram AM, etc.)
Fabric, cf. Thasian. Parallel from Olynthos
- SS 548 (a) KAENNO("Roughly made broad handle curving
down close. Red clay, buff at core and
near surface; cream slip thicker on top."
- SS 552 (a) ligature TE ? Fabric, cf. EK.
- SS 659 (a) satyr piping (gem impression) Fabric, cf. Chian.
- 675 (a) ivy wreath surrounding II,Θ-A (monogram); to left of knot, A
(gem impression)
Fabric, cf. Chian, but not close. Parallel, SS 8210 from Y,
well at 37/KA, to just after
350 BC.
- 676 (a) K in thick lines, roughly square field
Fabric like Thasian.
- 706 (a) EEΘ[] ? in rough circle. (Lunate epsilon.)
Fabric like EK.
in circle.
- 711 (a) monogram A with T; A Die varies; sometimes small
1303 (a) mark above, right.
13907 (M2) Fabric variously as like Thasian.
- 717 (a) possibly KO cancelled. Fabric like EK.
- 721 (a) monogram Θ with P Fabric, cf. Thasian, but not close.
- 722 (a) NYC[Fabric like EK.
- 732 (a) NIKEN[Fabric, cf. EK and Pontic (black bits). (With retr. reading, Corinth)
- 736 (a) 2 clusters? roughly made stamp.
Fabric, cf. Thasian, not v. close.
- 785 (a)
1268 (a)
11902 (M2) "incuse ring", impressions, all different, from
something like hollow reeds.
Fabric like Thasian.
- 839 (a) APIC(?? "Practically all of a small broad handle with
short upper part; micaceous buff clay with
peeling light slip."
- 842 (a) SIAO(Broadish ribbed handle nearly all preserved.
Fairly fine red clay, buff surface.
- 844 (a) AHMO(Fabric, cf. Parmeniskos Group.
12007 (K) " Flat, thin, sharp curve; micaceous, light red clay.

- SS 908 (Θ) skyphos? Fabric, cf. Thasian, but non-micaceous, hard.
- 984 (Θ) ΘΡΑΥΑΑ[, narrow stamp.
Fabric, cf. Thasian, not v. close.
- 987 (Θ)]ΡΟΔΩΝ, retr. Fabric like Knidian, rather early.
- 1013 (Θ) grape cluster Thick handle, thin rolled rim;
coarse clay with bits, buff to gray to
dull red.
- 1268, see 785
- 1303, see 711
- 1660 (Θ) ΘΕ in round stamp
Whole handle, both att., rim (roll); broad
handle, short top, out-swing to lower att.
Light red clay with bits, buff surface.
- 1685 (Θ) ΠΡΑΞΙΑΑ[, narrow stamp. Broad, thin; micaceous red clay,
(retr.) buff surface, gray core.
- 1754 (Θ) ΑΓΑΩ(? , short narrow stamp, set crosswise.
Broad; coarse red clay, white, etc, bits.
- 1755 (Θ) krater in round stamp. Like SS 13555, from T, well
Fabric, cf. Thasian; small frag. N of Nymphaeum, 115/117, (ca.
400 B.C., lower down)
- 11673 (ΜΖ) ΑΙΟΝΥΣΘ/ΑΣΡΟΖ with wine jar. Pergamon deposit has simi-
Fabric, cf. Thasian. lar stamps naming ΕΚΑΤΑΙΟΖ
- 11703 (ΜΖ) ΘΑ retr(?) Broad; red clay.
- 11711 (ΜΖ) ΑΗΜΟΝΟΜΟΥ Nearly whole handle. Fabric, cf. Th.,
but top very short and stem upright/
somewhat too short.
- 11811 (Κ)]ΙΑ rather narrow stamp.
Fragment at att. of broad handle,
roughly made; hard-baked reddish buff
clay with little mica.
- 11852 (ΜΖ) Α incuse, apparently pre-firing. Att. of broad handle;
Micaceous reddish buff clay
- 11880 (ΜΖ) ΑΙΘΙ/ΑΘΥ with device.
Rather thick, short-topped handle; micaceous
buff clay, pink surface.
- 11888 (ΜΖ) ΗΑ or rectangle with diagonal?
Fabric, cf. Thasian, rim like stubby Pridik
type, convex top.
- 11896 (ΜΖ) monogram? small rect. stamp, sunk border.
Broadish ribbed handle; rather fine red
clay, burnt.

- SS 11902 (ME) "incuse ring" see under SS 785
- 11994 (K) [HO]AYKAE(Sm.frg. broad handle, micaceous red clay,
(narrow) buff core.
- 12006 (K) NI in oval Broad, short-topped; reddish buff,
white bits.
- 12007 (K) AHMO see under SS 844
- 12042 (K) [E]ΣTIA[TPOΣ] with club Cf. similar Coan in MSBF
Broad, abruptly curved; red clay, large
distinct buff core, dark bits, light slip
- 12131 (ME) AHEAAEA Fabric seems Corinthian.
- 12137 (ME) KI Roughly made, broad, shorttopped; reddish Parallel from N, 4th cent
buff clay, light slip. hole, SS 11352.
- 12220 (K) [ΘHOΣ]ANOY, narrow framed rectangle.
Sm.frg. broad handle, ribbed beneath; finely
micaceous red clay, large distinct buff core
- 12314 (K) ACKAHN/IΘBPOY Fabric, cf. Thasian, but hard. Parallel from Perg.dep.
- 12316 (K)].BPOY narrow stamp.
Broad; dull reddish buff, rather
coarse, bits and mica, remains of
light slip.
- 12317 (K) MENIEK(narrow stamp
Like the preceding, but clay fired with
large yellow-gray core.
- 12430 (K) thunderbolt Rolled rim with horizontal projection;
smallish roughly made handle; rather fine
red clay, fired in rings on section,
surface dark with remains of light slip.
- 12481 (K) monogram ~~AK~~ Nearly whole of small handle, shorttopped;
micaceous buff clay, lighter surface.
- 12528 (K) EN[/H[left end of 2-line rectangular stamp, framed.
~~slay~~ Possibly Knidian; burned.
- 12537 (K) .A[single-line stamp
Fabric, cf. Chian, but broader than usual.
- 12635 (K) KOPINOO[narrow framed stamp
Broadish, rising; clay, cf. Coan
- 12791 (K) APXEAAO[?LINE ABOVE AND BELOW
Fabric, cf. Thasian, but hard.
- 12796 (K) BAKXIOY in circle.
Was considered Knidian, typed KT 1941,
but uncharacteristic really. Perhaps ZH
group: cf. ZHNON in similar stamp, ABC

- SS 12797 EYXΩ Broadish, short-topped; pinkish-buff clay
(K) with small black bits, remains of light slip.
- 12800 TEAA/MENOZ Nearly whole handle, broad, with short descend-
(K) ing top; clay buff on surface, showing distinct
rings of gray and red on break; hard.
- 12801 ΣΡΙΑΤΡ(with club Part of broadish arched handle, rather
(K) high, overhanging, collar rim; clay, cf. Coan.
- 12899 monogram  Nearly all of rather small handle, from
(K) large Chian lagynos??- lower attachment seems
to be on shoulder angle; clay consistent.
- 12900]A with part of letter or possibly device below
(K) Fabric, of Chian and Knidian.
- 12901 ΜΑΝΤΕ(with trident?
(K) Broadish; coarse red clay, cream slip.
- 12903 ?]ΑΡ[Fabric, of Thasian, but hard; close to
(K) SS 12,791, but cannot identify stamp as
definitely same.
- 12904 ΑΙ.Η Broadish, arched; clay, of Coan.
(K)
- 12906 ΕΥΑΝ/ΘΟΥ Broad, thin, ribbed, arched handle; micaceous Pergamon dep., 3
(K) coarse red clay, gray at core, micaceous ex. of not quite
same dig, #1289
- 12974 ΔΙΟΞΚΥ/ΡΙΑΟΥ with lyre
(K) Broadish, arched ribbed handle, rather small;
clay reddish buff with gray core and light slip;
some mica
- 13058 ΘΙ ?? in round stamp Small frg.; rather coarse reddish
(K) buff clay with black bits.
- 13650 head in profile, incuse, stamped with a coin? (size right)
(MZ) Shorttopped, rather thick handle; coarse reddish
buff clay with white and other bits; red stain on top
near neck.
- 13654 combination of letters, round stamp
(MZ) Rather thick; fairly fine red clay, remains of light
slip on top.
- 13656 ΑΝΤΙ ?, with prow in small separate stamp
(MZ) From near upper(?) handle attachment of handle
rather like Knidian (early)
- 13907 monogram Α with T, see under SS 711
