RHODIAN STAMPS IN THE COLLECTION OF THE NATIONAL MUSEUM, ATHENS

Numbers given to Rhodian handles in the National Museum are based on the numbers assigned by Nilsson to each eponym and/or fabricant whose name appears in stamps catalogued by him from the finds at Lindos in Rhodes, see Martin P. Nilsson, Timbres Amphoriques de Lindos, Copenhagen, 1909, pp.349, ff. By using these numbers, and storing the handles in their order, we arrived directly at an alphabetical storage order for most of the Rhodian handles at the National Museum. Specific numbers for individual handles have been composed by adding EM numbers (for ΕΘΝΙΚΟΝ ΜΟΥΣΕΙΟΝ) to the N(ilsson) numbers.

There are some names on National Museum Rhodian handles which are not found in Nilsson's catalogue of the Rhodian from Lindos. For the present, these names have not been numbered. In place of numbers, the names themselves have been written in full on the handles, followed by the specific EM numbers. Handles bearing these names are stored in their proper alphabetical position in the drawers. For example, the two handles ANTIAEEN EM 1 and ANTIAEEN EM 2 come between the seven handles of the fabricant ANTIFONOS, N(ilsson) 53 EM 1-7, and one dated by the eponym ANTIAOXOS, N 54 EM 1.

The handles are stored in the drawers in the order of their numbers. As far as the specific (EM) numbers go, this is not quite the order of the following list. Although prior to numbering the majority of the handles had been laid out according to the system followed by this list (for each name, from simpler to more complicated stamp types, those containing a month name alphabetical by month, etc.), many handles were found at various later times, having been stored in other parts of the museum, and then had to be added under the individual names. Other additions have resulted from recent decipherment of difficult stamps.

It is believed that the majority of the handles in the National Museum were found in or near Athens, but provenance is known definitely in few cases. Where it is known, the handles have been marked with indications of provenance. The Rhodian

from the excavations at the Olympieion by Mr. Mitsos in 1939 - 1940 were numbered in a special sequence for convenience of study. These OA numbers appear in parentheses in the following list. Certain handles are assumed to have come from Alexandria, since they were found in cases deriving from the Rostovitz or Demetrious collections.

In the list, where the minuscule reading is exactly the same, EM example numbers follow one another horizontally, e.g. N 7 EM 2-13, 23, 24, etc. (In Rhodian stamps, the same minuscule reading does not necessarily imply the same die, since there is great die variation.) Where the EM numbers follow one another vertically, e.g. N 7 EM 14¹⁵, there are different minuscule readings, i.e. variations in word order or arrangement in lines, or case endings, abbreviation, etc.

N. Mus. - Rhodian 2 photography

Very few of the Rhodian in the N. Mus. collection have been photographed.

I happen to remember that a few were taken in the interests of the Spongers article of Hesperis 1953, and looking some of them up, I note that there are Rhodian on the following 15 films:

Roll 204. 21, 22

205. 13, 44, 1; 21, 22 (sides)

283. 26-28

284. 41-18 — (N 7 - N 18, + stems without N numbers)

Contacts have been attached to the kartonulas (of those I checked), and their film numbers entered there.

It would be a good idea to enter the film numbers in the working copy of the typed summary list of Rhodian at the N. Mus. ^{the numbers of} Take these on Roll 284 from the kartonulas, since some ^{ex nos.} have been changed, and correct on film list. (Stems on Roll 284 probably follow kartonula order.)

Working out photos. needed: can probably do tolerably well working from the kartonulas with our Rhod. file, since many rubbings exist.

Look up, for each kartonula, in both notes and phot. cards, to see if the type has as good phot. illustration,

as N. Mus. collection could provide. If not, list
the item as to be phot.. 2.g. I quickly find
proceeding from the beginning, that N 7 EM 18 made to
be phot. since this is a pretty good ex., acc. to the
rubbing ^(on type card) and there is no phot. at all to illustrate
the type.

Jobs that could well be done at the same time:

- 1.) Correct the entry on the back of the master card,
to give the real, exact, citation for EM example.
Sometimes what is there is just a tally III, and
sometimes it is a number which has been revised
(EM ex. no. changed). Write corrected number and
or, if correct, underline in red
- 2.) Look up Benedic rubbings, to see if there is a
clearly better ex. of the same thing in ABC.
Write to Mr. B. and ask for it. But it may not
be too easy for him to find it by this time, so
a tolerable EM ex. should be phot. anyway.

Good idea to get at this, and get into habit of
|| asking Mr. B. right away for photos. which
improve the illustration of any types.

15.V.63

See p. 69 of N. Mus. Journal, entry of 17. XI. 61: "After Stoa. AS has

finished his big job of looking up from EM Benedic heartulas & Rls.
files, and putting into the file the precise inventory numbers. ...

(15.V.63)

At the same time he has listed items of which the film used photos — in all 742 items on 23 whole films. . . .

This list was later reduced, since it included a lot of items not illustrated but pretty dim; perhaps not always just right reductions made.

Roll 526, exposed May 16, 1962, is last one done up to now (as METT found it ^{too} difficult & do this job last winter ^{anyhow} without pressure which I was ^{too} pressed myself to make). This brings us through those listed for Kpatidas (sp.), and well over half the list I guess.

16.IX.64

Further rolls now entered in working copy of Rhodin name list: Rolls ^{May 1963} 544, 545, 579, 580, 581, 582, 583, 584, 585. With this, finished (?) through for $\Pi\epsilon\iota\sigma\iota\sigma\tau\epsilon\rho\alpha\varsigma$, Rolls 544-5 in May 1963 (before Alexander & check film) and 579-585 in Oct. 1963, last day Oct. 25. Again by Alexander.

22.X.64

From 16.IX.64 through 9.X.64, 4 rolls were exposed, Rolls 625-628, and 213 of Roll 629. This completed the Rhodin list for photo.

RHODIAN STAMPS IN THE COLLECTION OF THE NATIONAL MUSEUM, ATHENS

Numbers given to Rhodian handles in the National Museum are based on the numbers assigned by Nilsson to each eponym and/or fabricant whose name appears in stamps catalogued by him from the finds at Lindos in Rhodes, see Martin P. Nilsson, Timbres Amphoriques de Lindos, Copenhagen, 1909, pp.349, ff. By using these numbers, and storing the handles in their order, we arrived directly at an alphabetical storage order for most of the Rhodian handles at the National Museum. Specific numbers for individual handles have been composed by adding EM numbers (for ΕΘΝΙΚΟΝ ΜΟΥΣΕΙΟΝ) to the N(ilsson) numbers.

There are some names on National Museum Rhodian handles which are not found in Nilsson's catalogue of the Rhodian from Lindos. For the present, these names have not been numbered. In place of numbers, the names themselves have been written in full on the handles, followed by the specific EM numbers. Handles bearing these names are stored in their proper alphabetical position in the drawers. For example, the two handles ANTIAEEN EM 1 and ANTIAEEN EM 2 come between the seven handles of the fabricant ANTIFONOS, N(ilsson) 53 EM 1-7, and one dated by the eponym ANTIAOXOS, N 54 EM 1.

The handles are stored in the drawers in the order of their numbers. As far as the specific (EM) numbers go, this is not quite the order of the following list. Although prior to numbering the majority of the handles had been laid out according to the system followed by this list (for each name, from simpler to more complicated stamp types, those containing a month name alphabetical by month, etc.), many handles were found at various later times, having been stored in other parts of the museum, and then had to be added under the individual names. Other additions have resulted from recent decipherment of difficult stamps.

It is believed that the majority of the handles in the National Museum were found in or near Athens, but provenance is known definitely in few cases. Where it is known, the handles have been marked with indications of provenance. The Rhodian

from the excavations at the Olympieion by Mr. Mitsos in 1939 - 1940 were numbered in a special sequence for convenience of study. These OA numbers appear in parentheses in the following list. Certain handles are assumed to have come from Alexandria, since they were found in cases deriving from the Rostovitz or Demetriou collections.

In the list, where the minuscule reading is exactly the same, EM example numbers follow one another horizontally, e.g. N 7 EM 2-13, 23, 24, etc. (In Rhodian stamps, the same minuscule reading does not necessarily imply the same die, since there is great die variation.) Where the EM numbers follow one another vertically, e.g. N 7 EM 14¹⁵, there are different minuscule readings, i.e. variations in word order or arrangement in lines, or case endings, abbreviation, etc.

Additional commentary
on EM Reading list

In a few cases, where Nilsson number is given to
a name as fabricant, we have used the number to apply
to an origin of this name, i.e. ³Aptoruridos —
we believe all instances are act. citing ~~fab~~ ^{and sp.} ~~epa~~ of
this name, not - fab.

N. MUS. RHODIAN

Note that readings exist only on the original half-cards (spoiled 3x5's cut in half). They are not exactly inventory readings, i.e. they don't show individual preservation by brackets, but "cards once made were used as type cards for the collection, additional examples listed on the first card." (See p. 1 of Journal starting 3.X.52).

There are no brantulas with readings in the drawers, but only name cards.

To have made duplicates of these Rhodian would have taken

$$\begin{array}{r} 8 \overline{) 3426} \\ 42 \end{array}$$

$$\begin{array}{r} 12 \overline{) 3426} \\ 24 \\ \hline 102 \\ 96 \\ \hline 66 \end{array}$$
 duplicate pads if done for each item separately, and even if partly assembled by types (like e.g. LK in Alex.) would have made a very bulky record.

The typed list is a safeguard against loss of any of the brantulas, since it leads to the Agona Rhodia index where the reading of any item can be identified, its number being on the back of the reading card. 16.III.61 In fact,

I see that this is not consistently the case. Look at these types:

1A252N

"

1EPAZ

"

1EP2N

dolphins

concomitant dolphin's eye

double-eye

condemned

OVER

The citations on the master cards from N. Mus.
 at first were simply a tally (I, II, III etc.).
 Although individual numbers do appear in some
 citations, this is by no means consistent. To
 make it all consistent will be quite a large
 job, to be done consulting the Portulaca.

Discuss with AD. Recall that much of
early work on N. Mus. was done by others -

12. II. 64

The R.M. numbers have since been added to
 the ^{photo} files for all examples.

N. M.: Check of some doubtful Pheidon names
for Phil. Fabricius list

1.) Εφα
via clear, large letters. Last alpha X
Late angular. Japanese slant.

2.) KΔs
ago
pas The placing of the letters indicates there were
no marks in first line (ie 5 marks KΔs[LT])
although we don't have the right edge pres.
very broad handle

3.) KΔzap
xos Very clear; left edge of stamp not pres.
thick arched handle. Pin

4.) Λυίτ(ou (not found) (at least nothing to be seen there)

5.) Λυκίνο Very clear.
Rather thick, curves down after short
sl. rising top. Pin.

6. Λυκόδα This is correct, not with Δ penultimate.
thick arched

7. Νικαγόρα Some clear examples

8. Πατα (2) (Eaten out & right, but this for same
name) Entirely clear
Angular.

(over) Πατα clear

9. Παράμ
von

Clear.

angular. Pinn

10. "Σκώρος"

3 or 4

$\Sigma[3 \text{ or } 4]\Sigma$

burns (radiate)

angular. Rather small

Plasma?

11. Σφαίρα

Clear.

Short ^{typical} angular bands; inside

Some ^{fine} micaceous red clay
buff surface.

12. Σωσόδου (rot.)

clear. Linear signs, a curious
omega mark of 3 vertical strokes

III

angular. Dark clay

13. Τυμ [↑] κράτους

- letter not clear, but A as usual,
as O. Near Τυμασπέρους
as usual.

angular. Pinn

14. [Φ] δίνου
παράμ

So much iron, and frequent
for art.

Lat angular; tall thin pinn.

(20)

15.) φιδανίου πρόβ16.) Χάμπυδος
δοτ

αυτο.

αρχιτεκτονική. Σαν μιν.

Figuring out how to number the index handles in the
Nat'l Mus. collection

On plan figured for Alexandria, and using to id.
collection E. (^{πικραφ} ~~οὐδὲν~~) M. (οὐδὲν), thus

N 229.3

E.M.4

N 239

(as being already
with)

3 E.M.4

This means, N sub-numbers have to be given to our
types not in N (change the name is). I will have to
work through the Agor. Rhodian files with the numbers
on the master cards; - ~~first part~~ right away, in
order to be ready for Miss. II finishing her, and
taking up beginning of E.M. files. (2)

Miss. II. (or someone) will write the readings (in duplicate;
copy to the name):

N 6, 10. E.M. 1-7

Ag. 00β

00δου

(supplying 7 examples
of the type)

⊗ The new type numbers taken from the Agor. index
will be added in alpha index. But of course
they will not set up in index order, as no more
will come in for numerous places. So then will be
to be lists, possibly interrelated with N.

23. VII. 50

Simplify things,
and probably work,
to use only main

Nelson numbers, and

number all E.M. handles with this sp. or fab. name under the main N. no. regardless
of exact type.

1. IX. 50. Note that this was the system used - see
charts dated 21. VIII. and 1. IX.

made
 One to readings of the Pile
 handles in the National Museum.

2nd half of 1949

⊕
 There seems to be no record of the work done by Miss T.
 last summer, ^{and into the autumn as opportunity offered} after the preliminary sorting by readings done
 by Andreas Dine (chiefly) and by Miss E. (what remained
 when Andreas had to go) in May and June '49. She did
 make cards into readings
 finally of all but a few difficult examples, [⊗] gave the new
 types to Miss Kohn, and had file cards made, checked
 them and filed them in the general file, and left the new
 in a separate one
 types to be photographed. At that time no numbers were
 written on the small cards or handles save Nelson numbers.

For this collection, separate cards were not made for
 individual handles, but only for types, as which were put
 labels of the numbers.

17. IX. 52

⊗ Note that she seems not to have done anything with
 the files labelled by Andreas as "not easily read" but simply
 went through them as had already sorted.

⊕ See pp. 6-7 of original journal for planning for
 this work (entry of 3. VIII. 49).

National Museum - RHODIAN

Have started Miss T. and Andersson writing numbers on C. Rhodian handles in the National Museum, so as not to lose Miss T.'s free mornings before school starts again. This goes on while I am in Thessalonika. They will add to the N. (Nilsen) number a number in the E.M. (Epigraphical Museum or Επισκοπή Μουσείο) using only main N. number, not subdivision number, and beginning over again with EM 1 for every main Nilsen number. The numbers to be given serially with the alphabet as we file the types; but if some are out of place and later found - or later added to collection - they just go on at the end of the N. number. Looks like this: N. 14 EM. 3 with an underscore to show it is all one number.

1. IX. 50

Monday through Friday, 21-25 VIII, they worked on the numbers every morning, for four hours except on the first - short - morning when we all came late. Monday 28. VIII they returned to Agora, as I had thought to be back. Receiving my telegram from Thessalonika they returned to the N.M. Wednesday 30. VIII, and worked to Thursday and - now - Friday. About $\frac{3}{4}$ of $\frac{4}{5}$ will be finished today, before Miss T. starts on her holiday tomorrow. Plenty of handles have been numbered for photography. Miss T. says of those with dots on the small cards, not 20 (over)

Some cards already
finished but my
very handles -
C. Pansani

are missing, which is remarkable after their lying about so long.

19.12.50

They finished numbering those that have Nilsson numbers.

~~N. series 900. E.M. 3~~
