SHAPE: Knidian amphora handle, oval in section

DECORATION: Stamp, K(nidian) T(ype) 993 (Grace)

INV. NO.: ASP.184

OBJECT: Transport amphora toe

PROVENANCE: Isthmia (ASCS site no. M-009)

MEDIA: Clay, medium-coarse, tan-orange with large and small gray and white inclusions 7.5YR 6/6

PRESERVATION / DIMENSIONS: Cap toe, surface worn MPH:0.032 TopD:0.037

SHAPE: Corinthian B amphora cap toe a truncated cone. Can see twist marks on interior from finishing/closing together the body walls at bottom. Toe solid; may be seeing bottom of central depression caused by removing finger out during closing operation.

DECORATION:

INV. NO.: ASP.185

OBJECT: Transport amphora rim

PROVENANCE: Isthmia (ASCS site no. M-009)

MEDIA: Clay, fine, orange-tan, voids, paler slip 5YR 6/6 closest (clay) 7.5YR 7/5? (slip)

PRESERVATION / DIMENSIONS: Small part of rim and beginning of neck wall

MPH:0.056 MPW:0.079

SHAPE: Corinthian B amphora mouth/rim of jar squeezed to oval shape. Ridge around top of neck. Rim flaring, outward-thickened with convex outer profile and horizontal, slightly troughed upper face. Separations in section show how clay was added to exterior to build out the rim.

DECORATION:

INV. NO.: ASP.186

OBJECT: Transport amphora rim fragment

PROVENANCE: Amphilocheia (ASCS site no. G-001x)

MEDIA: Clay, coarse blisterware with gray core, orange exterior bands. Many large dark inclusions; some very large white

PRESERVATION / DIMENSIONS: 1/5 circumference of rim, edges battered MPH:0.042

MPW:00.123 WRim:0.049 HRim:ca.0.036

SHAPE: Corinthian A amphora rim, heavy over-hanging rim with slanting upper face approximately horizontal moulded under surface, and outer edge slanted in toward neck. Not as steep as rim from rim. *clay core of 2/2.4c-8c*

DECORATION:

INV. NO.: ASP.187

OBJECT: Transport amphora rim fragment

PROVENANCE: Amphilochoia (ASCS site no. G-001x)

MEDIA: Clay, coarse blisterware with gray core and bright orange outer bands; dark swirls on exterior and interior surfaces 2.5YR 6/8

PRESERVATION / DIMENSIONS: Small part of rim, chipped at upper edge MPH:0.061

MPW:0.105 HRimest:0.133

SHAPE: Corinthian A amphora rim, heavy overhanging rim with steeply sloping upper face

DECORATION:

INV. NO.: ASP.188

OBJECT: Transport amphora rim

PROVENANCE: Amphilochoia (ASCS site no. G-001x)

MEDIA: Clay, coarse, beige with many large red and grey inclusions 7.5YR 7/6 paler than

PRESERVATION / DIMENSIONS: Small part of rim, broken along outer edge and beginning of neck wall with part of upper handle attachment. Surface much abraded. MPH:0.048 MPW:0.101

SHAPE: Corinthian A amphora rim, handle attached just below rim, which was broad and overhanging with very slightly sloping upper face

DECORATION:

INV. NO.: ASP.189

OBJECT: Transport amphora toe

PROVENANCE: Palaeo Avli, Amphilochoia (Akarnania) (ASCS site no. G-001)

MEDIA: Clay, fine, beige, redder at core 10YR 6/8 5YR 8/4 closest (core)

PRESERVATION / DIMENSIONS: Toe chipped at side, some incrustation, red stain(?) at upper edges MPH:0.081

SHAPE: Corinthian B amphora toe, tip of small sized (?) amphora. Slight bulge at very base; above, sides flare in concave profile of lower body

DECORATION:

INV. NO.: ASP.190

OBJECT: Transport amphora handle fragment

PROVENANCE: Palaeo Avli, Amphilochoia (Akarnania) (ASCS site no. G-001)

MEDIA: Clay, beige-orange with many large inclusions 5YR 7/6

PRESERVATION / DIMENSIONS: Lower half of handle with attachment, covered with deposit where surface not worn MPH:0.115 HWxTh:0.033 x 0.037 (base)

SHAPE: Corinthian A amphora handle, oval in section at base and tear-drop shaped at midpoint where broken, from slight spine along outer edge

DECORATION:

INV. NO.: ASP.191

OBJECT: Transport amphora toe fragment

PROVENANCE: Palaeo Avli, Amphilochoia (Akarnania) (ASCS site no. G-001)

MEDIA: Clay, coarse, orange with many large inclusions 7.5YR 6.5/5

PRESERVATION / DIMENSIONS: 1/3 of wall of toe MPH:0.067

SHAPE: Corinthian A amphora toe, cylindrical (approx.) with bevelled lower edge

DECORATION:

INV. NO.: ASP.192

OBJECT: Transport amphora rim fragment

PROVENANCE: Palaeo Avli, Amphilochoia (Akarnania) (ASCS site no. G-001)

MEDIA: Clay, medium-fine, beige-orange 7.5YR 6/6

PRESERVATION / DIMENSIONS: Small part of rim, surface worn MPH:0.035 MPW:0.091

SHAPE: Corinthian B amphora rim, squeezed rim, straight portion above handle, rim flaring, convex in profile, with upper face approximately horizontal

DECORATION:

INV. NO.: ASP.193

OBJECT: Transport amphora rim fragment

PROVENANCE: Palaeo Avli, Amphilochoia (Akarnania) (ASCS site no. 6-001)

MEDIA: Clay, relatively fine, beige 10YR 7.5/4

PRESERVATION / DIMENSIONS: 1/3 of rim circumference, outer edge of rim broken away, surface deposit MPH:0.051

SHAPE: Corinthian A or A' amphora rim, heavy apparently overhanging, would have had steeply sloping outer face

DECORATION:

INV. NO.: ASP.194

OBJECT: Stamped amphora handle

PROVENANCE: Lavrion: Megala Pevka (ASCS site no. A-089)

MEDIA: Clay, fine, pinkish brown, slipped yellowish cream 5YR 6/6 (clay) slip not possible

PRESERVATION / DIMENSIONS: Upper part of handle to angle, part of inner neck face MPL:0.091 some black incrustation

SHAPE: Rhodian amphora handle, sharply angled, round in section

DECORATION: Stamp, Helios head, Athanagoras

INV. NO.: ASP.195

OBJECT: Stamped amphora handle

PROVENANCE: Delos (ASCS site V-001)

MEDIA: Clay, fine, pale orange, cream slip 7.5YR 7/6 (clay) 10YR 7/4 paler than (slip)

PRESERVATION / DIMENSIONS: Upper part of handle and part of inner neck face MPL:0.095

SHAPE: Amphora handle rises close to neck then curves down, round in section

DECORATION: Stamp, ivy leaf?

INV. NO.: ASP.196

OBJECT: Stamped amphora handle

PROVENANCE: Delos (ASCS site V-001)

Indications in the upper right corners classify handle and/or stamp, distinguishing 1) place of origin when known - T(hasos), R(hodes) K(nidos), etc.; 2) type of stamped vessel if not an amphora; 3) language if not Greek; 4) shape of stamp if not a plain (unframed) rectangle; retrograde inscription (indicated by an arrow). Inventory numbers and any other documentation go to the left, any descriptive comment to the right, dimensions unless otherwise specified being width by thickness of handle where stamped. Numbers in the middle are negative numbers.

Dear Natalia,

I have made sure that you have for the Archives a copy of everything relevant that the JAH Dept at the Stoa had in its file on the stamped bundles and amphora fragments in the ASCSA Collection. The papers are ordered now in your file by date, earliest to latest (on top).

We have notes and readings on most of the JAH, it seems, but proper readings on Miss Trace's "duplicates" have never been made, ~~but~~ in spite of our intentions to do so in 1984. We do have rubbings of all but NR. ASP. 215, which I should come take one day.

AMPHORAS Project will put these on computer in the near future. When we have ~~it~~ done so, I'll give you a copy for the Archives.

Thanks for your help!

Yours,

Carolyn (Kochler)

Tuesday 3.7.90

My dear Carol,

The stamped amphora handle I gave you was found on a Sunday (June 17, 1990) in Stamata of Attica, very near Ekali (the place is called Amygdaleza or Mygdaleza).

I was following the directions of John Travlos' "Bildlexikon zur Topographie des Antiken Attika" (CI 16/10 Reserve shelf) p.85 below and p.86. I was looking for the christian Basilica and I was told by a nun (there is a convent nearby) that the church I was looking for was found in a Greek rich man's property (we can find out what his name is, if you need it). So, since I couldn't approach to the basilica (the rich man's private property was fenced all around, of course) I tried to get as close, as I could but from outside the fence, that is from a ploughed field next to the private property. I saw the amphora handle right there, lying on top soil. Unfortunately I cannot tell you right now whether the field is to the N, S, E or W of the basilica. I didn't notice.

.....

I first showed it to Mr. Williams, who said that he couldn't think of a parallel and that it might prove to be a rare piece.

He suggested that I should give it to the School's sherd collection. So I did.

Having first taken 4 pictures of it. Miss Grace or Carolyn Koehler may be able to give us more details.

Note that in Travlos' *Bildlexikon* is mentioned that the church may be indicative of an earlier settlement in the area, which may have been the center of the ancient deme Plotheia.

For further Bibliography see
Travlos "Gebiet um Dionysos" p. 86.

Christine

17 February 1962

Dear Virginia,

I have given the following numbers to stamped handles in the School collection:

ASP 75 *A* : Cf. your note of 11. III. 59 no. (d).

ASP 76 *[H]* : Cf. ditto, no. (c). I still think that it is probably a "Ze" group stamp, perhaps *Ze* *more*

ASP 77 *ΘΑΞ[ΔΝ]*
Σηπας
[ΕΥΑΓΟΡΑΞ] : Cf. ditto no. (b).

ASP 78 *ΕΠΙΕΛΠΟΥ*
ΑΕΤΥΝΩΜΟΥ
ΤΕΥΘΡΑ *son of grain* : Cf. your note of 6.XII.61.

From Patrochos Island.

The cards are now filed, and the handles will be in a place that they can be located, probably the Seminar Room.

Thanks for the note.

Yours,

Jim [Mc Gredie]

From Prusias ? (pre-exposed)

Note on Sinopean handle in ASCS
sherd collection from (A 59) Patroklos Island

Reading: ΕΠΙΕΛΗΘΥ
ΑΣΤΥΝΟ(ΜΟΥ) grape-cluster
ΤΕΥΘΡΑ ear of grain

Like E.M.Pridik, Inventory of Stamps in the Hermitage, p.89, no.559.

ΕΠΙΕΛΗΘΥ is listed by Grakov, Ancient Pottery Stamps with the Names of
Astynomoi as an astynomos of his Group II, see his p.124; and ΤΕΥΘΡΑΖ as a
fabricant mostly of this Group, but slightly lapping over into the period of
Group III, see p.129.

Grakov's absolute date for his Group II is about 270-230 B.C. However
another example of this Group, SS 11354, comes from an Agora deposit considered
to date 3/4 of 4th century B.C.: J 11 : 1, described by L. Talcott as "post-
Olynthos, a little post-Pnyx."

G.'s

The end of his series, his Group VI, is dated by him 121-70 B.C. Six examples
of this Group were found in the construction filling of the Middle Stoa; so I
would prefer to think the series ended in 183 rather than 70 B.C. (both dates end
eras for Sinope). Counting back from 183 the (maximum) number of eponyms listed
(astynomoi)
by Grakov for each of his periods, for Group II I find his "about 40" astynomoi
should fall from about 350-310 B.C. This corresponds pretty well with the context
above-cited for SS 11354.

So the handle from Patroklos Island might date last quarter of 4th, since
Teuthras is one of the later fabricants of Group II.

I would be glad of this handle had a number of its own.

EARLY RHODIAN STAMPED HANDLE FROM KEA FOUND VII.61 BY R. STROUD

In July, 1961, R. Stroud picked up an early Rhodian handle from the surface near Korissia, Kea.

Reading: ΠΑΠΑΙΑ
ΥΕΑΝΙΑ

Other examples of this stamp, i.e. with the same reading, line-break and letter-forms, have been found in Alexandria, Corinth (CP 1731), Rhodes (Dontas excavations), Samos (Heraion inventory), Bulgaria (see M. Mircev, Amphora Stamps in the Museum of Varna, Sofia, 1958, pl.XX, 6), and at Porto Raphti (PR 46).

A variation with lunate sigma is also known from Alexandria.

TT.63
275
The preposition para is known in amphora stamps only with the names of the early Rhodian fabricants ^{M 2 v 437, M 2 v 438} ΒΟΙΕΚΟΣ, ΕΥΦΡΩΝ and ΠΑΥΣΑΝΙΑΣ. Both of the first two are known on fragments which name also the eponym ΑΓΠΙΟΣ. For the combination ΕΥΦΡΩΝ - ΑΓΠΙΟΣ see Hesperia, Suppl. X, p.141 under no. 70, a handle from Pnyx context dated by H. A. T. in the late 4th century B.C. (packing of the City Wall). The name of the eponym ΑΓΠΙΟΣ has been read on a handle from Porto Raphti (PR 79).

The shape of the Kea handle - broadish, short-topped, and without much arch - corresponds with that of handles on the group of Rhodian jars considered to date before 300 B.C., the best context evidence being that of H. A. T. above cited. The relative heaviness of the Kea handle, and its "normal" Rhodian clay, indicate the jar was of the ~~normal~~ "normal" shape among the three general types in use in Rhodes at this time, i.e. the shape which gradually developed into that for instance of Hesperia 1934, p. 202, fig.5 (SS 370, from HAT Group B), and later to the more common jars such as Hesperia 1953, pl. 42, II.

The handle is herewith returned, since I believe it is to go into the collection of the ASCS.

COLLECTION OF AMERICAN SCH. OF. CL. ST.

WHOLE AMPHORAS

Two jars placed on Roll 416 (for Judy to practise on before going to Volo) were turned in to J. L. Caskey, ^{as Director,} some time before ^{summer} 1957, by a man whose name seems not to have been recorded. At present they are kept on the roof of the ASCS, in stands made for me by Master John, and regrettably deteriorating in the weather.

These two are a rather late Palestinian (*) type, and a 4th B.C. (?) type not yet isolated.

In addition, there is a Coreyean, placed yesterday ^{the day before} and ~~today~~ on a mostly - personal film which will be called Roll 466 ~~I guess~~ (although it will be finished before Roll 485, half done in the N. Mus.). See notes on this jar in VARIOUS MINOR GROUPS, under Coreyean - Corinthian.

7.XII.61 (*) During the storm on 5.XI.61, this Palestinian - ^{Thompson-style} type jar was blown over and broken, its stand having worked too far open to hold it firmly. As I did not pick up the pieces promptly, they were tidied away by Jiffy Robinson and a friend, a day or so later, by throwing them over the parapet. There ^{increased number of pieces} were later gathered up by R. Robinson, and have been brought to the Str. of A., and are at present stored by its kind in the East Basement (between bunks 7 and 8).

This jar's place is decorating the stoop of the Director's residence. It once belonged to Mr. Filipp (before the 2nd World War). It is covered with marine deposit, but the tops of the handles were cleaned off enough (by me) to see they were unstamped. Base of handles also fairly well cleaned.

Yesterday early, but in sunlight, I plotted it against my front porch's pillar. This morning I took 2 shots (A ^{466.34} ca 1 and ^{466.35} 2 sec.) without sun.

best. In early, recog. by small piece of wood in front, bottom. Ht. to top of handles ca. 0.72 (not very exact, because cannot balance it on higher handle) diam. 0.408 (circles under compression) Ht. ca. 0.20 (slit later capacity)

marks of anti-sag brims clear on side (not of ?) now of oblique brims in band below pt of first diam. Cleanest. finger marks inside neck at handle att.

clay: on top of handle, when deposit has been removed, clay shows with warm buff.

NOTES ON JAR FRAGMENTS FROM PRASIAI

A selection of jar fragments, stamped and unstamped, has been shown me by A Steinberg and J. McCredie, who, with H. Jones as architect, have been making a study of the site of this Attic town on the cape forming the south shore of the bay of Porto Raphti (cf. Baedeker, Greece, 1909, p.121). The following notes cover also a stamped Thasian handle found on the site by Mrs. Bandi.

There are altogether 4 stamped handles, of which 2 are Thasian (a and b), and two of uncertain origin, perhaps early Rhodian (c and d).

a) ΘΑΙΣΙΩΝ
dolphin
[ΔΗΜΑΑΚΗΖ]

Example of the type of Bon, Les Timbres Amphoriques de Thasos, no.591. One more example is known, from Abdera, beside the one listed by Bon.

The types of ΔΗΜΑΑΚΗΖ, of which 6 are known, are not directly dated by any context of discovery, but comparative studies, chiefly of the devices shown in his stamps, suggest a date toward 300 B.C.

ASP.077? b) ΘΑΙΣΙΩΝ
ASP.159? grapes
[ΕΥΑΓΟΡΑΞ]

Example of the type of Lenger-Grace, B.C.H., 1958, no. 42. (Not in Bon corpus.)

The types of ΕΥΑΓΟΡΑΞ, of which 7 are now on file with us, again are not dated directly by excavation context, but other indications suggest about the same date as that of ΔΗΜΑΑΚΗΖ. Each has a type showing a wine-amphora; the shapes represented in the two are very close to each other, and seem to mean to depict the Thasian amphora of toward 300 B.C., with its relatively long handles, full rounded body, and short stem above the tip.

ASP.076? a) ΙC
ASP.157? ΑΙ
(retr.)

We have not been able to identify any known type in what is preserved of this stamp. The shape of the handle and section of rim preserved suggest it may be early Rhodian, i.e. of the late 4th century B.C. If so, possibly restore: [ΑΓΗ]C though the C may be a round epsilon.

Note that just a vestige of the A is preserved, not a certain reading. [ΙΚΗ Η (c)
ΑΓΗΕΙΚΑΗΖ is named in similarly formed stamps on early Rhodian handles. (retr.)

ASP.158?
ASP.075? d) We have not been able to decipher the combination of letters incompletely preserved in this stamp. Monogram stamps do occur on early Rhodian handles, and the fabric of (d) is much like that of (c) (no rim preserved, however), so possibly (d) is early Rhodian.

The stamped handles, then, suggest a date of ca. late 4th century B.C. Some unstamped handle and rim fragments also shown me from Prasiai could be about the

same date. These include mushroom (down-turned) rims not encroaching on the handle, and rolled rims against which the handle was plastered, as in "Coreyean" jars of probably late 4th to early 3rd century B.C. Two amphora toes look much like one (uncatalogued) from a deposit of the ^{late} ~~last quarter~~ of the 4th century at the Athenian Agora (the blind passage from the ^{drawalift} ~~south chamber~~ of Thompson's Group B cistern system, see Hesperia, III, 1934, pp.331 and 332).

Mrs. Bandi's Thasian handle is (a) in the list above, and will be retained by her. The rest of the fragments will be kept in the collection of the ASCS.

Corinthian sequence

E. V. a couple of weeks ago brought me fragments of medals and coins from Amphilocheia Argos which turned out to be Corinthian, probably of the 5th (not early) and 4th cent. B.C. I. They fall between our 4 catalogued pre-Persian medals (P 2337-4, P 15912, P 11065 - this ^{sequence} seems to show a slight development) and our early 3rd cent. medals, P 5528 and P 5525 (=, early 3rd cent. def. of 63/NA). (One of them had a rim a good deal like that of C 40-404, far from 4th cent. wall, the others were probably much earlier - flatter rim.)

Note interesting diff. in rim of P 5528 & P 5525, like diff. between obverse of these pieces (a nusheem and a bandrim).

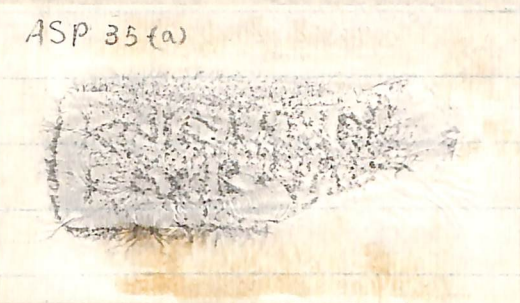

COLLECTION OF
AMERICAN SCHOOL OF CLASSICAL STUDIES

Notes prepared for Mr. McLeod, student this year,
to help him prepare his catalogue cards. The rubbings
were made by him or by ^{HEATH} Walter Heath. For them that
have rubbings here, readings were made from rubbing, not
from originals.
