Fig. 2. — Profils amphoriques d'Amphipolis.

BOSPOREAN — OF AKANTHOS

("Quaternary and Quin")

M. Garlan, calling today, speaking about non-cooperation of Greek archaeologists, referred to his own identification of the stamp - types of AKANTHOS, a site on the peninsula of Chalkidiki. There is an article on this by Rhomiopoulou in BCH ^{pp. 479-483} Sup. 13 — well, I see there is a second article, by Nektarios-Patera, pp. 485-490. The 1st discusses material from a cemetery in Akanthos, + 115 of stamps with 2 coins of Akanthos, attributed to Akanthos. The 2nd discusses material ^{exclusively} from Amphipolis, reasons why this class can't be Thasian (as thought by some); attributes to Amphipolis.

Garlan is sure they come from Akanthos, because he has identified a factory producing such in Akanthos. But he can't publish this, because the relevant Greek won't let him.

file →

The first article shows an amphora, stamped?, with whole profile pres. The other one, profile drawings of large frags. (p. 488).
