## Koiné later types with groups of dots

On this pair <sup>of type</sup> of Δοοκοοπίδας in the form of  
'Αισοιδασίδας(?)', with the dative Δαμάτρεος -  
Εὐφφω, on Debs 27, under nos. 132 and 153.

"On some examples [of KT 491] one sees an  
arrangement of dots between the names perhaps  
meant to indicate a wreath."

"On some examples [of KT 1551] there is an  
arrangement of dots to the right of the bull's head  
perhaps meant to indicate a wreath."

Should be studied to see whether when the dots  
appear (etc. their place is clear of them), as  
the letters? i.e. had they gone?

Cf. usage in coins; Hunt. Lit. 71, March  
1971, p. 18, under 108. "in barbarous tell  
tetradrachms with dots replacing inscriptions."

16. ΕΠΙΓΡΑΦΕΣ in circular stamp with central device an eagle standing right. Handle from a Knidian amphora, dating somewhere about 100 B.C. The stamp is our K(nidian) T(ype) 553; on these types, see Hesperia 1985, p.14, note 28. There are known a great number of examples of KT <sup>553</sup>~~553~~, but none very clear; the reading is put together from various handles. One has been published: Tenos I, p. 249, nos. 168-172; cf. also pp. 56, 66. We do not know what stamp was on the other handle of these amphoras; a nearly whole amphora with this stamp on one handle has been put together in Deles, but the other handle was not found.

On Late Knidian

Among the handles grouped as "Late Knidian", now being tabulated by Miss E (those after 556200), note there are many with representations of amphoras. Whereas the type of Klempittes shows a jar with baggy body much like our (inst.) LK jar, the others do not, and the type of Askios has one with a wide flaring lip. Do we have to sort them further? Are some earlier types?

Muscul. notes on LATE Kindin

See letter of today's date to M.T. Fortnum,  
filed in PALESTINE - ISRAEL

30.XII.75 Published notes <sup>on the class</sup> on Pringo (Suppl. 8), p. 160, under  
no. 169; and Delos 27 (EAD), p. 354, under (section)  
G. The date given here (1st B.C., after 86) should  
be modified a bit, unless one supposes that these  
copper types are contemporary with some regular  
Kindin. Because according to data on  
ibid. p. 322, there are <sup>ca.</sup> 7 driving years  
after the break of 88-85 B.C., which brings  
one down to <sup>ca.</sup> 78 B.C. for the end of driving.  
And probably "ADy Ora" types being on down  
a little beyond that. So say "1st B.C.  
after the 1st quarter."

See notes to B. Adamshoch, filed under  
KENC#REAI.

LK — "late Knidian", to be considered with a query — ? —

whenever appearing. These are handles bearing stamps of certain types which <sup>includes</sup> never ~~the~~ the word

KNIDION, but the fabric is like the specifically Knidian of the 1<sup>st</sup> cent. (some like the "Attic" handles, some ~~but~~ having a broad short upper part with abrupt angles) The stamps —

abbreviations in large letters

devices without words. (see under Knid, Agv, claud.)

hem <sup>heli</sup> etc.)

amphora, usually surrounded by the word

KΛΕΥΘΕΩΣ running along the four sides

The abbreviations are apt to be in very large stamps the edges of which often fail to be impressed. When the margins are clear the stamps are usually rectangular with rounded corners tending sometimes toward a rough oval.

Date — the majority of these are probably late 1<sup>st</sup> cent.

B.C. None appear to be later. Some may be earlier.

SS 349 ΔΡΑ  
ΘΕΥ  
r. fr. is supposed to be late 3<sup>d</sup> - 2<sup>nd</sup> according to context but this seems unlikely from its fabric.

This large group is to be separated from the miscellaneous of Agvōra

These handles (according to a few specimens) are short ca. .29 in ht. as compared with ca. .29-.30 of the late 2<sup>nd</sup> cent. 1<sup>st</sup> Knid. and even the .22-.25 of the earlier Knid. (371 is .225)

See 2830, 7249, and the one disc. Durrant p. 14 (with list) Recognizable Knid. 1<sup>st</sup> cent. some about .25 in ht. (4062, 3679, 2260).

American School of Classical Studies

June 2, 1992

Dear Dr. Beazecsky,

Thank you for your note of March 13, with interesting enclosures: your proposed publication of some fragments of late Knidian amphoras, including a stamped handle, found far from their source. You had I believe, called on us here at the Agora Excavations in Athens, on Oct. 2, 1990, and consulted about this material.

For where to publish this material: I myself have usually published in the journal Hesperia, but that mostly takes reports and discussions of finds made by members of the American School in Athens. I think you should probably try for one of the French or Italian journals, that deal more with finds further west. You might write to:

Dr. F. Laubenheimer  
3 rue Brézin  
75014 Paris  
France

She is very knowledgeable and active in the field of amphora imports to the west, dating over several centuries. I think those western journals like to include results of petrological analyses.

One comment on your stamp: I think now that it shows not exactly the profile of the head of a man, but of a theatre mask representing such a man.

I suggest a little alteration in one paragraph of your text, the fourth:

". . . Many stamped Knidian

amphoras are kept in the Agora Museum, and thousands of stamped handles from other Knidian amphoras. Six of these handles at the Agora have stamps like that on the Magdalensberg handle . . .

In your first paragraph you write as though you think Knidos is an island, or is on an island. But actually it is a port on a peninsula on the coast of Asia Minor, the Datcha peninsula in modern Turkey.

It might be a good idea if you could get someone who also knows English to go through your final text before it goes to an editor. There are several spelling mistakes, also places where a word seems to have been left out, etc. I am very glad you are including a map. Would it be a good idea to identify some things in it, such as the Danube? possibly the outlines of present-day countries? - if they can be expected to stay the same for a while!

I see that Dr. Laubenheimer already knows some of your work, see enclosed photocopy. So perhaps you already are in correspondence with her.

Yours sincerely,

*Virginia R. Grace*

This KT 1612 was later cut down to a B stamp with only the bowl. (and better traces near edges). Many more exs. of it known in the cut-down state.

This is <sup>letting go</sup> pretty similar to

KT 1746 reading ΕΠΙ ΘΕΩ

It had been thought before - see notes of 9.V.67 on   
 KT 102 (for EAD 27, E96) and related types, p. 2 - that   
 KT 1746 was a type of ΝΙΚΑΓΟΡΑΣ, but that & go with   
 1745, the duoviri in 1745 are wrong (they read ΒΙΚΗΡΑΣ   
 & ΑΡΙΩΤΙΔΑΣ) - In any case, whether or not another cf.   
 type is the real one, this pair (ΡΟΔΟΚ(ΔΥΣ) and ΠΟΛ(   
 should probably be added to the series. It does not   
 seem to have been listed before. I entered it in   
 pencil in Pnyx, p. 149. Perhaps it is one of 2 pairs

# On the group Ἐπιόφαντος

There is an earlier ep. Ἐπιόφαντος, placed before 146 BC by 3 ex. of a type of Χερμοκρέτης ep. Ἐπ. found in Corinth. ~~etc~~ Fabricius was wrong in:

- Ἀθυσίος w. wing
- Ἀσκληπιδεύς w. bowl in □
- ~~Βουδακρέτης w. horn~~
- Δαμωκρέτης w. caduceus?
- Διονύσιος w. trident
- Διονύσιος w. insect
- Εὐβόλος w. pear
- Μένυς w. cluster (2 type)
- Ξερκίδης w. ear
- Χερμοκρέτης w. vase

K. ep.

The later Ἐπιόφαντος is contempor. w. division  
 Ἀθυσίος - Ἀσκληπιδεύς; perhaps also Ἀγαθόλαος -  
 Ἀσκληπιδεύς. Fab's who name him seem to be:

- Ἀθυσίος w. crescent (= Isis emblem) <sup>main type: SS 939 "ex. Hcl. - E2"</sup> (dior. "w. horn")
- Ἀσκληπιδεύς (w. horn): <sup>dior. type</sup> ~~main type~~, SS 5147 from D 11:4, middle fill, to 1st BC - later
- Βουδακρέτης w. horn <sup>(main type, w. horn)</sup> (SS 5020, "in Hcl. fil") <sup>much resembles type of</sup>
- Κερκιδεύς (no horn in main type): SS 4920 ~ D 11:3, <sup>sharp fill</sup>

(SS 5134 in upper part of D 11:4)

(dior. type not ident. and (horn)?)

Μενέλαος w. caduceus; no context; <sup>proposed -</sup> <sup>dior. type</sup>

Note of 28.VI.67 suggests that  
 'Αγαθός'επος - 'Αροδά'ειος type with  
 bull's head (KT 1481) is companion type  
 of Διοσκουρ. in the form of 'Ανδρ'οει'ος  
 (KT 479) MET and I looked at lot  
 photo. of the 2 types (on that day) and  
 decided they looked to be a pair.

Find now the cards out and clipped  
 together, and do not know what other  
 entries may have been made. It seems  
 this makes a tie between the eps.

'Ερμ'οφ'αντος and 'Ανδρ'οει'ος, since it  
 means probably in any case an overlap of a  
 single driver, and possibly of 2 (γ' 'Αγαθ-  
 'Αροδ. do go with 'Ερμ'οφ'αντος, cf.  
 under Pnyx no. 153.

25.X.74

Checking the types name 'Αγαθός'επος - 'Αροδά'ειος  
 (there are only 3) (1481, 1482, 1484 - 1483 was very muddy) +  
 (1480 is just Διωνύς). There are no joint pairs, cannot  
 make up my mind that things with 'Ερμ'οφ'αντος  
 rather than with 'Ανδρ'οει'ος (see above) but  
 if the latter, it means a third pair with 'Ανδρ'οει'ος,  
 and this has not been suggested for any other ep.  
 There are not such a lot of ~~pairs~~ types name 'Ανδρ'ο-  
 ε'ος anywhere.

on Ἐπρόφαστος,  
Kn. sp.

Looking at the grid in the drawing cabinet,  
bottom drawer, I found a <sup>marginalia</sup> suggestion that  
Ἐπρόφαστος actually preceded Ἀδριανός. In  
the list, with dates by year, dated 22.VIII.87, I  
found him placed before the break 88-85, the  
last one. This would explain 1) the rather few  
examples, and 2) the fact that 4 fab. names  
are that belong to pre-Mithras times, i.e. that  
name many pre-Sullan epigrams.
