Comm for Phanagoria excavation

Shelov, excerpt from p.151

The stamps of Kos, found in the number of 14, are applied only to double-barrelled handles. ^{Kos!} ~~Coarse~~ stamps on one-barreled thin handles mentioned by Shtaerman, [2] are not found in Phan. All the Kos stamps are either rectangular or oval and have only one word - a name in full or abbreviated (✓ χ ΑΑΑΙΟΣ, ✓ ΜΕΝΕΚΡΑΤΗΣ, ✓ ΠΑΟΥΤΑΡΧΟΣ, ✓ ΗΡΑΙ, ✓ ΔΕΥΚΟΣ, ✓ ΟΡΟΒΙΣΝΟΣ, ✓ ΖΩΤΙΚΟΣ and others), sometimes with an added device. Only in one round stamp on double-barrelled handle there is a monogram ^{✓ (exactly the same in Grakov's list)} Φ , the deciphering of which is difficult (another Kos stamp with a monogram was found in Pantik.).

(See USSR folder for the rest of the text of this article by Shelov.)

✓ there are examples in Grakov's list from Phanagoria
X in Grakov's list without brackets

19.XII.57

Coan material in Lebanon, Syria, etc.

I have today given notes of introduction, longhand, to Martha Heath, addressed to M. Seyrig, the Emir Chehab, and M. Dunand, asking that they let her take rubbings of any Coan on hand, and hoping somebody local will be willing to take more rubbings afterwards, if there is more material, and will learn from her how to do it while she is there.

I gave her a letter also for Dr. Joseph Saad at the Jerusalem Museum, asking for the same.

BAALBEC - The six columns of the
Jupiter temple Dec. 25th

Dear Virginia,

We have delivered your
four letters, and so far have seen
only M. Seyrig who has been
very kind and offered us a room
at the French Institute from
his 2nd floor. We'll call again
at the Museum then. Mr. Saad
is away here until tomorrow,
so we'll call on him Monday
when we've come back from
Terra. - The Tourist Agency has found
a German couple to share the
car - they seem very nice, and it
will help to permit Jerusalem is
fully up to expectations. Such a
lot to see! Happy New Year to you - Martha

19.XII.57

Coan material in Lebanon, Syria, etc.

I have today given notes of introduction, longhand, to Martha Heath, addressed to M. Seyrig, the Emir Chehab, and M. Dunand, asking that they let her take rubbings of any Coan on hand, and hoping somebody local will be willing to take more rubbings afterwards, if there is more material, and will learn from her how to do it while she is there.

I gave her a letter also for Dr. Joseph Saad at the Jerusalem Museum, asking for the same.

10. I. 58

On her return several days ago, Martha told us she had found no Coan. She was not able to go through the storerooms in Jerusalem, and very likely there are there other examples in addition to those known to us from 'Aqra Hafir. But she examined a good many bundles from Byblos, some at the site and some at the museum in Beirut without seeing any Coan; furthermore M. Seyrig told her he had not seen any in Syria at all.

light brown in colour with white slip all over the surface. The height is 11.2 cm and the diameter of the body 6.0 cm.

The last one coming from the Hellenistic stratum of S 20 has a remarkably emphasized shoulder with a cylindrical neck slightly bent inside and a thick mouth. The outside bottom has a kick. It is well fired, yellowish brown in colour with white slip all over and dark red decorative bands, one at the shoulder and two on the body. The height is 12.5 cm, the diameter of the body 9.0 cm.

Lamps Of the three lamps unearthed, two came out of the same pit and have almost the same shape common to all Hellenistic lamps, i.e. a round body with a long wick mouth and a circular line sunk into the shoulder. Both are well fired and light yellowish brown. Both also have a slightly kicked bottom. The one is 3.6 cm high and 8.2 cm long (Plate L 2), the other 3.4 cm high and 8.4 cm long.

The third lamp, compared with the two mentioned above, is different both in form and colour and is unique in that it has a decoration on the shoulder and the upper surface of the wick mouth, which is large-sized and continuous with the body. The decoration is carved out with a matrix, the main figure of which is a bearded face — maybe an image of Zeus — placed on the joint between the wick mouth and the shoulder. The lamp is well fired, dark brown and has a little lustre (Plate L 1).

Handle of a Jar made on Kos Island This is a handle of a jar consisting of two jointed cylindrical parts and connected with the rim of the mouth. On this there is a Greek inscription which can be deciphered as ASKLĒPI [...] (Plate L 4). *add [club] below*

Glass Wares

Glass Flask with a long Neck It is an extremely thin vessel with a flat-globular body and a pointed, long neck. The bottom has a kick. Made of a slightly yellowish transparent glass, the surface has become silvery. A part of the rim of the mouth and of the lower body and bottom are lacking. Present length 11.6 cm, the diameter of the body 7.2 cm.

6. Summary

The main object of investigation during this season, i.e. the Iron Age strata in R and S trenches, proved to be disturbed by the following two factors.

The first is the disturbance caused in later periods. Namely, the Iron Age strata were destroyed to a considerable degree by the digging of pits during the Persian Period or the construction of Arabic tombs in the Middle Ages, so that stone walls were damaged and the stones reused.

Secondly, there is some evidence which indicates the occurrence of a cave-in. In the previous season, it was already made clear that the uppermost Iron Age stratum (Stratum VI) showed signs of repeated disasters and accumulation of fallen bricks, earth and sand. The like situation could be observed also during the second season 1965. Especially noticeable is the accumulation of ashes in several layers, of which some are about 2 cm thick and others surpassing 10 cm. On the division wall between R and S trenches, ash lines mark large arcs, and in S trench they decline from east to west (Plate III below). Inclined are not only ash lines, but also the remains of constructions like the stone foundation of brick walls or stone floors. In the case of the red sun-dried brick wall in R 18, not only inclination, but clear traces of cave-in can

Koan handles from Corinth

Corpus no. 243	(C-48-10)	Co 252	: Εκταίρος

484	(C-46-2)	Co 366	: Νικιάδ[us?]
714	(C-49-37)	Co 421	: club, crab
714	(C-45-105)	Co 1253	: club, crab
867	(C-66-63)	Co 619	: Ζώνης club

These are all Mott has assembled. Note they include a find of 1985.

These are unlikely to date between 146 and 44 B.C. However, some Kritikon of those years have been found in Corinth, including some with stamps of the duoviri period, ca 105^{110?} - ca 58 BC
