Dear M. Masson,

Thank you for a copy of your review in Gnomon of Fraser's Lexicon of Personal Names, its first volume.

I imagine we both are aware of the complications of producing a publication of this kind. However, ^{Fraser} ~~he~~ insisted on having my material, published or not. I gave him my working lists of the names known to appear in stamps on Rhodiwn handles. The names were numbered to facilitate sorting the thousands of stamped handles in storerooms in Alexandria. Mr. Fraser is not an archaeologist, and did not understand that an inventory number identifies an object, not a name. Many of the names in my lists (of eponyms, and of fabricants) ~~may~~ ^{may} be not on any handles found at the Agora, since we find few of the later Rhodian that are so numerous in Alexandria. For your own use, then, wherever ^{in this volume} a Rhodian name appears with "Agora inv." and a number, the number is just that of a name, not of an Agora find.

Yours sincerely,

Virginia R. Grace

SONDERDRUCK AUS BAND 62 · 1990

C.H. BECK'SCHE VERLAGSBUCHHANDLUNG MÜNCHEN

AUS DEM INHALT DES 61. BANDES (1989)

1. ALLGEMEINES

Reallexikon für Antike und Christentum. Sachwörterbuch zur Auseinandersetzung des Christentums mit der antiken Welt. Hrsg. von Dassmann, Colpe, Dihle, Engemann, Kötting, Speyer, Thraede, Waszink, Lfg. 97-104: Gütergemeinschaft bis Heilgötter (Heilheroen) (H. D. Betz)
Syme, Roman Papers, IV. V. Ed. by Birley (J.-C. Richard)

2. GESCHICHTE DER ALTERTUMSWISSENSCHAFTEN. NACHWIRKUNG. HUMANISMUS

Becker, Dahms, Wegeler (Hrsgg.), Die Universität Göttingen unter dem Nationalsozialismus. Das verdrängte Kapitel ihrer 250jährigen Geschichte (C. J. Classen)
Erasmus. – Opera omnia Desiderii Erasmi Roterodami recognita et adnotatione critica instructa notisque illustrata. Ordinis Secundi Tomus Quartus: Adagiorum Chilias Secunda. Pars altera. Edd. Heinemann et Kienle (R. Kassel)
Kneppel, Wieshöfer, Friedrich Münzer. Ein Althistoriker zwischen Kaiserreich und Nationalsozialismus. Mit einem kommentierten Schriftenverzeichnis von Drexhage (E. Badian)
Memoria dell'antico nell'arte italiana. A cura di Settis. Tomo I: L'uso dei classici; II: I generi e i temi ritrovati; III: Della tradizione all'archeologia (H.-W. Krufft)

3. ANTIKE AUTOREN

Aristoteles. – Kamp, Die politische Philosophie des Aristoteles und ihre methaphysischen Grundlagen. Wesenstheorie und Polisordnung (E. Schütrumpf)
Augustinus. – Schmidt, Zeit und Geschichte bei Augustin (F. G. Maier)
Cicéron, Correspondance. Tome IX. Texte ét., trad. et annoté par Beaujeu (D. R. Shackleton Bailey)
Euripides, Alcestis. Ed. with translation and commentary by Conacher (P. Riemer)
Homerus. – Hölscher, Die Odyssee. Epos zwischen Märchen und Roman (H. Erbse)
Horatius. – Connor, Horace's Lyric Poetry. The Force of Humour (H. P. Syndikus)
Parmenides. – Études sur Parménide. Publ. sous la direction de Aubenque. Tome 1: Le poème de Parménide. Texte, traduction, essai critique. Par O'Brien. En collab. avec Frère; Tome 2: Problèmes d'interprétation. Par Aubenque, Brague, Cassin, Cordero, Couloubaritsis, Dixsaut, Frère, Guérard, Muller, Narcy, O'Brien, Rocca-Serra, Viola, Wiesner (H. Schmitz)
Plato. – de Vogel, Rethinking Plato and Platonism (W. Beierwaltes)
Propertius. – Butrica, The Manuscript Tradition of Propertius (A. La Penna)
L. Annaei Senecae tragoediae. Incertorum auctorum Hercules [Oetaeus], Octavia. Rec. brevis adnotatione critica instruitur Zwieler (J. Delz)
Synesius. – Vollenweider, Neuplatonische und christliche Theologie bei Synesios von Kyrene (M. Erler)
Vellei Paterculi Historiarum ad M. Vinicium consulem libri duo. Rec. Watt (J. Helle-Vergilius). – Hardie, Virgil's Aeneid. Cosmos and Imperium (E. A. Schmidt)

4. LITERATURWISSENSCHAFT. PHILOGIE

Bremer, van Erp Taalman Kip, Slings, Some recently found Greek poems. Text and commentary (M. Davies)
Gold, Literary patronage in Greece and Rome (E. J. Kenney)
Havelock, The Muse Learns to Write. Reflections on Orality and Literacy from Antiquity to the Present (W. Rösler)
Poetae Comici Graeci (PCG). Edd. Kassel et Austin. Vol. III 2: Aristophanes, Testimonia et Fragmenta. Vol. IV: Aristophan – Crobylus. Vol. V: Damoxenus – Magnes (H.-J. Newiger)

A Lexicon of Greek Personal Names. Edited by P. M. Fraser and E. Matthews. Volume I: The Aegean Islands, Cyprus, Cyrenaica. Oxford: Clarendon Pr. 1987. xxxvi, 490 S. (The British Academy.) 60 £.

Les hellénistes de diverses spécialités attendaient depuis longtemps un ouvrage qui viendrait enfin remplacer le vieux Wörterbuch der griech. Eigennamen de W. Pape et G. E. Benseler (PB), dont la mise en œuvre date des années 1863-1870.¹ Vers 1973, l'épigraphiste et historien d'Oxford Peter M. Fraser eut le courage de lancer une telle entreprise, qui serait cependant limitée aux seuls anthroponymes (ici: a.) attestés historiquement, les noms divins ou mythologiques d'une part, tous les toponymes, oronymes, hydronymes, etc., d'autre part, étant laissés de côté.² On comprend ces restrictions, vu l'énormité de la tâche, bien qu'elles soient en théorie bien regrettables pour les utilisateurs – et qu'elles maintiennent le recours au vieux PB pour de nombreuses décennies.

F. explique dans son introduction (VII-XXI) comment l'entreprise, conçue d'abord sur un plan alphabétique, suivant la tradition des dictionnaires, fut modifiée en cours de route pour laisser la place à une série de volumes régionaux. Ainsi le vol. I annoncé ici contient, d'une façon certes arbitraire, les îles de l'Égée, avec Chypre, et la Cyrénaïque. Le vol. II doit renfermer l'Attique, le vol. III le Péloponnèse et une grande partie de la Grèce propre, et ainsi de suite (VII). Ce parti pouvait assurément être discuté, les deux procédés ayant leurs avantages et leurs inconvénients. Suivant le classement alphabétique global, un volume pour la lettre A contenant le domaine entier aurait été certainement très long à réaliser, avec le risque de demeurer longtemps unique, comme le prouvent d'autres expériences. Finalement, un volume régional comme celui-ci a l'avantage, sous un format maniable, de former un ensemble assez cohérent. Grâce à l'abondance de la documentation onomastique qui est fournie par les grandes îles, la Crète, l'Eubée, Kos, Rhodes, Chios, Samos, Thasos, on obtient une bonne idée de l'anthroponymie grecque dans son ensemble, avec des secteurs doriens et ioniens, aussi une partie éolienne. Dans de nombreux cas, on a déjà des indications utiles sur la fréquence, la localisation et la chronologie d'un a. grec: voir ainsi les entrées Ἀπολλώνιος, Δημήτριος, etc.

C'est grâce à l'utilisation systématique des ordinateurs que F. et sa principale collaboratrice Mme Matthews, assistés par plusieurs spécialistes, ont pu faire paraître ce vol. I. Il renferme une documentation énorme, qui est disposée sur trois colonnes, dans une impression très lisible. Etant donné que chaque attestation d'un nom est numérotée (chiffres gras), on trouve ici une énumération géographique, dans l'ordre alphabétique des sites (par exemple d'Amorgos à Théra), et chronologique, autant que faire se peut, pour chaque site. Ainsi, depuis les hapax (très nombreux et sur lesquels on reviendra), on arrive aux champions de la fréquence déjà cités, tels Ἀπολλώνιος (532 nos) ou Δημήτριος (426 nos), etc.

¹ Encore maintenant, grâce à diverses réimpressions, on utilise l'édition de 1863-70, voir l'historique donné dans ZPE 42, 1981, 193-204 (l'expression «two editions» en VII n'est guère exacte).

² En 1989, on a annoncé la mise en route d'un Lexicon of the Greek and Roman Cities and Place Names in Antiquity, General Editors A. M. Hakkert and R. F. Willetts, Amsterdam. Il s'agira encore d'un recueil partiel, car doivent être exclus «Countries, Rivers, Seas, Bays, Capes, Roads, Mountains, Lakes», ce que l'on pourra regretter.

Cette présentation est effectivement très commode et riche d'enseignements de toute sorte. Elle montre en même temps le nombre et la richesse des sources utilisées (bibliographie en xxii-xxxiv). Tous les recueils épigraphiques existants, comme il est naturel, le SEG, parfois le CIG quand c'est nécessaire, des ouvrages spécialisés, des articles de revue, la plupart des œuvres de L. Robert, et pour les monnaies (noms des magistrats monétaires) une quantité impressionnante de recueils et catalogues (on y reviendra). Les textes des auteurs classiques ont naturellement été utilisés pour les ressortissants des régions considérées, textes littéraires, historiens des FGrH, philosophes de Diels-Kranz, etc.

Dans certains cas, les attributions régionales peuvent demeurer nécessairement hypothétiques, ainsi pour Héro(n)das utilisé à l'occasion pour Kos, avec ou sans interrogation (s. vv. Βάρταρος, Μύττης, etc.; le nom du poète encore sous Ἡρωίδας (4), à tort selon moi). Pour les personnages historiques, on a renvoyé systématiquement à la RE, ce qui est un procédé, économique: ainsi Homère a une brève entrée: «Chios? (1) ?VIII-VII BC RE...», beaucoup de choses étant dites en peu de mots ou sigles.

Dans l'utilisation de ces innombrables sources, les spécialistes de tel ou tel domaine trouveront assurément des lacunes, ce qui ne pouvait être évité (voir des exemples plus loin). En sens inverse, on pourrait se plaindre d'une sorte d'excès de zèle, lequel a conduit à une chasse aux exemples nouveaux qui est susceptible d'être dangereuse. Je crois qu'un recueil de grande consultation, destiné à demeurer longtemps en usage, se doit d'être extrêmement sélectif et prudent. Or, en regardant de près, on constate, surtout pour des hapax, le recours excessif à des sources quasi impossibles à contrôler: journal quotidien (Bêma, biblio. xxiv), volumes rarissimes (Peristianis, xxi), catalogues numismatiques consultables seulement dans les plus grands cabinets (voir la biblio passim, environ soixante-dix titres!). Mieux encore, d'assez nombreuses références renvoient à des inédits. Le souci est louable, mais comment contrôler, les formes en question étant souvent isolées, voire inquiètes? Ainsi en ce qui concerne des a. sur des anses d'amphores, des renvois à 'Ag. même sans no. De même, pour des inédits, souvent dans des musées locaux: que fera-t-on avec «Βάσων Chios (1) f. IV BC Unp. (Chios Mus., sherd)»? Les renvois à des monnaies inédites sont de la même espèce.³ Finalement, la liste des références pour des inédits divers occupe vingt lignes de la bibliographie (xxxiv). Cette richesse a contribué notablement à l'augmentation du nombre des hapax, ce qui est toujours dangereux (comme le montreront plus loin des exemples pour cette catégorie).

Un autre parti-pris plus ou moins contestable à mon sens est le renvoi constant et unique à des encyclopédies et surtout à diverses prosopographies. Les renvois à la RE pour les personnages historiques sont admissibles; cependant il n'aurait pas pris beaucoup de place de donner d'abord une référence de base, par exemple 'Hdt. ... = RE. ' (pour les textes, la consultation du vieux PB fait toujours gagner du temps). Mais pour les contemporains d'Alexandre, devrait-on se reporter à la prosopographie de Berve, qui n'est pas toujours d'un accès facile dans les bibliothèques? Pour les papyrus d'époque hellénistique, la PP ou Prosopographia Ptolemaica est certes

³ Pour les musées, noter aussi 'Unp. inscr. Mytilene Museum', 'Thera Museum', etc.; devrait-on chaque fois écrire aux musées en question? Pour des monnaies, noter 'Coll. late Pr. W. P. Wallace'; mais qu'est devenue la dite collection? Etc.

très recommandable; mais pour des personnages chypriotes, la PPC ou Prosopography of Ptolemaic Cyprus de Mme Nicolaou sera de consultation moins aisée. En conclusion sur ce point, je crois donc que des références d'un type plus traditionnel auraient profité aux utilisateurs.

L'adoption de l'ordre alphabétique, évidente pour un lexique ou un dictionnaire, ne semble pas poser de problème a priori. En regardant ce volume, on s'aperçoit cependant qu'il y a des nuances. Dans un recueil traditionnel, cet ordre n'est pas servile, il est relatif.

Ainsi le PB s.v. Θεόδωρος dira in fine 'S. Θεόδωρος' (ajoutons: 'ἡδ Θεόδωρος'), s.v. Θεόδωρος il y a 'Θεόδωρος', et ainsi de suite comme dans les répertoires du lexique. Ici, comme on l'a vite remarqué, l'ordre alphabétique est non seulement le souverain absolu, mais encore est-il dépourvu de toute espèce de renvoi interne.

De cette manière, l'helléniste qui veut se renseigner sur un a. grec et ses variantes dialectales éventuelles devra s'y retrouver tout seul, avec des formes apparaissant dans l'ordre strict de l'alphabet, sans élément de comparaison. C'est ce qui est annoncé (xii): «All true dialect-forms are entered separately from the Attic or koine forms». J'aurais donc préféré, soit le regroupement harmonieux de toutes les formes connues d'un même a., à partir de la forme usuelle: Θεόδωρος, avec Θεόδωρος, Θεόδωρος, parfois Θεόδωρος (manque dans ce volume); soit le maintien d'une série d'entrées correspondantes, mais assorti d'un système très régulier de renvois internes.

Ces premiers exemples sont simples. Il en va de même pour des variantes dialectales telles que -ίδας/-ίδης: en suivant l'ordre, Θεοδωρίδας apparaîtra avant Θεοδωρίδης, et ainsi de suite. De même pour des variantes phonétiques claires, comme Ζώσαριν et Ζωσάριον qui se suivent, Μάριν et Μάριον proches. Mais il existe des situations bien plus complexes, en fonction des formes parfois très différenciées que peut prendre un même a. grec.

Examinons le cas des noms qui à l'origine comportaient un w ou digamma. Plusieurs partis ont d'ailleurs été adoptés ici. On s'étonne d'abord de constater qu'à sa place alphabétique, après epsilon, la rubrique avec F initial se borne à quatre entrées seulement (192). Le premier, un Φαναξαγόρας de Crète, aurait d'ailleurs dû figurer plus haut sous Ἀναξαγόρας (35 sq.), car tel est le parti le plus fréquent dans ce cas: la forme avec F est placée parmi celles qui en sont dépourvues, ainsi pour Chypre le premier de l'entrée: «Ἀναξαγόρας Cyprus (1) ... (Fav-») (mention finale), ce qui est en somme une infraction au strict alphabétisme, avec séparation de formes identiques (Chypre et Crète). De même un Φάστων crétois est disjoint des Ἀστων d'Eubée, le Φικαδίων crétois d'autres Ἰκαδίων crétois, etc. A part également le Βικαδίων crétois, avec la notation fréquente du w par un bêta, qui n'a pas échappé à sa place alphabétique (101).

Bien d'autres formes sont dissociées. Pour les voyelles, un autre facteur important de dispersion est naturellement le flottement entre un alpha long conservé et le traitement par êta. On songe aussitôt au radical important Ἀγησ(ι)-, si répandu en domaine dorien (Crète, Kos, Rhodes) et à son équivalent Ἥγησ(ι)- en domaine ionien, ici avec un facteur supplémentaire de complication, le rhotacisme érétien, comme Ἥγηρανδρος, etc. La même variation, mais à l'intérieur, va semblablement séparer une série Ὀνάσ(ι)- d'une autre Ὀνησ(ι)-, plus l'érétien Ὀνήρανδρος, Ὀνήριμος, etc.

Tous ces cas ne sont pas vraiment difficiles. Pour les initiales, il peut y avoir d'autres complications. Soit pour les composés en Λάο-, ici peu nombreux sous cette forme, qui peuvent figurer sous Λα-, Λάναξ (Crète), Λεα-, Λεάναξ (Samos,

Concordance des œuvres hippocratiques. Tome VI: Index inverses du vocabulaire hippocratique, édités par Gilles Maloney. Hildesheim/Zürich/New York: Olms-Weidmann 1989. V, 488 S. 4°. (Alpha-Omega, Reihe A 75.)

Den herkömmlich an Zettelkästen arbeitenden Lexikographen werden seit Jahren die Möglichkeiten der elektronischen Datenverarbeitung entgegengehalten, wobei nicht nur erhöhte Schnelligkeit, sondern auch größere Genauigkeit und Vollständigkeit, in der Lexikographie stets angestrebte Ziele, als Vorteile genannt werden. Daß allerdings dann, wenn mehr als eine alphabetisch geordnete Zusammenstellung der Formen angestrebt, also die Lemmatisierung erforderlich wird, es auch in der Computerlexikographie zu zahlreichen Fehlern kommen kann, demonstrieren die ersten fünf Bände der Hippokrateskonkordanz,¹ zu der jetzt ein Zusatzband mit zwei rückläufigen Indices erschienen ist. Der erste Index enthält auf 59 Seiten die Lemmata der Konkordanz nach dem Prinzip des bekannten rückläufigen Wörterbuchs von Kretschmer-Löcher, jedoch ohne die Unterscheidung nach der Betonung. In dem zweiten Index folgen auf 423 Seiten (ebenfalls rückläufig) alle Wortformen, wie sie in den Perikopen der Konkordanz angegeben sind. Vorwort (S. III) und Einleitung (S. V) ersetzen wegen ihrer Knappheit nicht die Kenntnis von Paginierung und Einleitung der Konkordanz. Den Abschluß bildet außerhalb der elektronischen Datenverarbeitung erstellten Listen sind also die Datensammlungen der Konkordanz, deren Bearbeitung in den Bänden I–V zu erheblicher Kritik Anlaß gibt.² Die Frage, ob für Band VI Korrekturen erfolgt sind, da die erhobenen falsche, d. h. überflüssige, und 75 fehlende Lemmata als auch unter verschiedenen Gesichtspunkten die Lemmatisierung betreffen,³ ist leider zu verneinen.

Schon ein Blick auf die Anfangsseite des rückläufigen Lemmaindex (3) zeigt Auffälliges: Als erstes Lemma wird hier der Akkusativ φλέβα als Nominativ angegeben (neben φλέψ suo aber keinen Grund, nicht mit LSJ und älteren Lexika einen Singular φλόχον zu postulieren. ιδέα und εἶδρα (Lemmata 4 u. 5) zu trennen, ist inopportun. Etwas weiter auf S. 3 ihre falschen Formen. – Natürlich finden sich (mit einer Ausnahme⁴) im rückläufigen Lemmaindex nur diejenigen Fehler der Konkordanz wieder, die die Lemmata betreffen. Aber (Feminina der a-Deklination, Buchen substantivierter Neutra von Adjektiven als Adjektive, z. B. ἔμβουον s. v. ἔμβουος), bedeutet in rückläufiger Ordnung eine starke Verschiebung im Alphabet. Eine wenig hilfreiche Angabe sind im Lemmaindex die 181 Lemmata folgenden Homographen, an LSJ orientiert, teilweise auch an dem Lexikon von Bailly,⁵ vgl. die Einlei-

¹ Concordance des œuvres hippocratiques, éditée par G. Maloney/W. Frohn. Avec la collaboration du Dr P. Potter. 5 Bde. Montréal/Québec/Paris 1984 = Hildesheim/Zürich/New York 1986.

² Vgl. A. Anastassiou, diese Zeitschr. 60, 1988, 4–14.

³ Ausführungen zu Anstößen bezüglich der gewählten Lemmatisierung finden sich bei Anastassiou a. O. 5–7.

⁴ Die in der Konkordanz ausgefallenen Lemmata καίπερ, καίριος, καίτοι, καίω sind in den Indices des Bandes VI enthalten; dafür fehlt jetzt zusätzlich ὅ.

⁵ A. Bailly, Dictionnaire grec-français, rédigé avec le concours de E. Egger. Édition revue par L. Séchan et P. Chantraine, Paris 1950. – Bisweilen ist die Grenze zwischen Wörtern, die von verschiedenen Wurzeln abgeleitet sind, und Wörtern mit verschiedener Bedeutung nicht eingehalten (z. B. ὕδωρ 1 im rückläufigen Lemmaindex, dagegen in der Konkordanz

relating to Nikasion's date. Since a better reading of a stamp on an amphora from Cyprus (now in Sarasota, Florida, see Grace 1948: 146) shows that the eponym paired there with Nikasion is Aristodamos (not Eudamos or Sodamos as previously guessed), all eponyms that have been associated with Nikasion in known or reasonably guessed pairs (Agestratos 2nd, Athanodotos, Aristodamos 2nd, and Theaidetos) are now seen to date between about 184 and about 176 B.C. (Grace 1985: 8-9). This date is supported by the fact that three stamps of Nikasion were found in the Pergamon deposit (Schuchhardt 1895: nos. 1146, 1147, 1148), and none in the slightly earlier Middle Stoa construction filling in the Athenian Agora, of which the end date proves to be about 183 B.C. (Grace 1985: 24, summary on this end date, now, it seems, generally accepted; *ibid.*: 7-9 on relative dates of the Middle Stoa filling and of the Pergamon deposit, which ^{letter} is shown to ^{end} be about seven years later. The one stamp of Nikasion from the Agora (SS 13761)¹⁰ was found just on top of ~~the~~ a part of the Middle Stoa filling.

10. Note that the reference R 400 in Fraser and Matthews (1987: 331) is actually not an inventory number, nor any sort of Agora number, but it identifies a name in Grace's working list of Rhodian amphora fabricants (manufacturers).

Dear Virginia,

Thank you very much for your letter. To answer your question on Sinope first we shall of course explain the nature and extent of our debt to Brashinsky in our next preface, and (if I can find it) the date of his death. I have not yet looked at the material, & only had it computerized because I thought you might like to see it. I shall make a note on our copy of the file about your Hesp. 85 article.

I am most grateful to you for putting us on the right lines about the Knidian material. Once more I am not in a position at present to do more than accept your guidance, which I most gladly do, and note what the problems are that we shall have to face when the time comes. There will be a great deal of revision to do, since the list as it exists at present (and as you have it) is already ten years old.

Our vol III is moving ahead quite well; almost all computerized, and much of it edited. I wrote last autumn to Professor Koehler about Corinthian jars, but have had no reply.

I am going on a tour of Albania in April, since much of vol III is concerned with N. Epirus and Illyria, & I do not know the lie of the land, and without such knowledge I feel unable to make decisions. Shope I enjoy it. I hope to see you later in the year.

January 31, 1989

Dear Peter,

I was glad of the opportunity to meet your co-author Mrs. Matthews during your visit to Athens in October. I hope you both had a good journey home.

I have had a look at the printout of Sinopean names. In the book, are you going to put asterisks on the fabricants? I see they are sometimes but not always (?) described as "potters". For dates: if you use what Brashinsky has given you, you should of course attribute them, and say quite specifically when he gave them to you; he made his own revisions. Refer also to Hesperia 1985, pp. 20-21, for my dates for this class, which end the whole series in 183, when Pharnaces took Sinope. There is a certain amount of further confirmation to support this proposal.

For the volume which is to include Knidian, what I asked to see was of course not the text at this stage, but a sample of what you propose to print, so as to prevent expressions like "Agora inventory no. ~~4~~ R 34" (which did not appear in what I saw of the Rhodian before publication, but evolved later). I won't try to make individual comments on what you have sent me, since it needs lots of revision first by your co-workers against my Hesperia 1985 article. I mention several matters noticed in a quick look:

omission of eponym ΔΑΙΔΑΛΟΣ who appears in quantity in Pnyx and EAD 27 indexes Use our indexes, which are much better than what your young ladies will put together from looking at the articles. They not only show you what is in the article, but sort out the best items for your purpose.

duoviri are not identified (cf. ΒΑΚΧΙΟΣ). These officials are listed in Pnyx, as well as in Hesperia 1985. Are you counting them as potters? which certainly they are not.

Phrourarchs are not identified (cf. ΑΣΙΑΣΙΟΣ). On these, see EAD 27, pp.318-320. 4-month terms, sometimes named in stamps in addition to an annual eponym. Period IVA in list, Hesp.1985, pp. 32-34.

In checking their list against those pp. 32-34, the young ladies should discard a name such as ANAΠOKAHΣ, which was based on a guess made in 1934. And correct wrong spellings taken from out of date publications.

One more matter: I think you made some inquiry about "KT - can it be used?" As far as I understood the question, the answer is: not by you. A number preceded by ^{KT}KT identifies a Knidian stamp type, a particular minuscule reading, which may be known in more than one die and usually in a number of impressions. See EAD 27, p. 323, and cf Hesperia 1985, p.14 with note 28, - but enough was in EAD. In ^a~~xxxx~~ KT (Knidian Type) reading there are usually at least two names, sometimes four, which names reappear in other combinations. If you use these letters, KT, in a way of your own, you will cause confusion, at least at first. As with "Agora Inventory Nos."

The various American Classical or Archeological Schools seem to be copying the British ones, and having meetings at their various bases. Our director, W. Coulson, is off soon to Nepal, of which the ASCS is new to me. It is hoped there will be an opportunity to see mountains.

Yours,

15. XI. 88

[5.01]

1) I do not understand
the use: ^{a)} of "Other. (Knidos)"
of Ερπονέλης, Ευπαρία
which are Knidian sponges
undoubtedly.

~~2b)~~ "Knidos?" of Ζυρόδοτος
~~or~~ ~~of~~ Knidian ep.
and Εὐχέρης ^{surely} Knidian
ep.

Tel: (0865) 277235 & 277231

Dear Virginia,

It was good to see you the other day, and I'm sorry I hadn't been able to bring the Knidos - specimen with me. It contains (as you will observe!) A-Θ only. It represents an exact transliteration of what is on our fiches, which have not been touched for a good many years. I presume that in due course your "unpublished article" ~~became~~ Hesperia 1985, which supersedes much of the material listed here.

I have not looked at it at all, & in the normal course of things would not expect to do so for a few years, but we are getting things onto the Computer before I edit them now. I am extremely grateful to you for volunteering to look at the format and hope to hear from you in due course. No need to return the print-out, if you can explain your requirements by letter.

Yours are

Dore

10.XI.88

I did not volunteer to look at this stage, but asked for a sample of what they propose to print (so as to prevent nonsense like "Ag. inv. R 34").

On some...
 an cryptic - notes.
 5.07

10. XI. 88

Meaning of "Other (Knidos)"?

This is not what I need to see, but a sample of what they propose to publish, something like this I did see of the Rhodian (I took this & made some corrections), but I never saw any text containing "Ag. ins. R. 24" etc. anyhow, this does not yet use
 Hesp. 1985. Not worth much of our time at this stage.

SINOPEAN NAMES

Dear Virginia,

FRASER LEXICON

Peter called at the Store 24th & 8th [6.05]
and gave me this. With him was
Mrs. Elaine Mathew, co-author of
the Lexicon. The Lexicon was
provided about 10 years or
more years ago, simply copied from his slips. It is the usual double form - one alphabetical
one on the "reference-field".

This is a print-out of the material
I imagine there is not much here you haven't got yourself (you may have more,
since we have done no work on it at all), but if you should wish to quote any of the material
listed as UP (i.e. given by Brashinsky as 'unpublished'), I suppose you had better say it came
from the material he provided us with; but he is not likely to turn in his grave if you don't.

I shall try to come & see you at the Agora Thursday morning if possible; but I
have so far spent 3 days trying to see Petrakas, & I have to fit my movements round him
(a most elusive character).

I spent a profitable week in the Peloponnese with the weather broke.

Yours
Deser

FRASER

August 23, 1988

Dear Peter,

Thank you for your letter of August 9. With regard to "Corcyrean" versus "Corinthian B", best to write to Carolyn Koehler. For some years she has been calling these jars products of Corinth; but recently, as I understand it, kilns containing such amphoras have been found in Corfu, so it seems some at least were made there.

For Greek stamps on amphoras made in the west, I do not have this well in hand, but cf. Hesperia 51, 1982, p.342, bottom paragraph (Will).

For ΙΗΗΟΚΡΑΤΗΣ, Rhodian fabricant, I don't see why you did not give the useful reference in Hesperia 1985. In this case, it was not necessary to reduce him to that imaginary Agora inventory number.

I did not, you know, agree to such an identification as, e.g., "Agora inventory number R 290" (for Hippocrates). Agora inventory numbers for fragments with stamps begin with SS. Others that may be made up do not lead to information, when your readers write to the Agora Excavations. You cannot decide, like Humpty Dumpty, what "Agora inventory number" means.

I thought it might be possible to avoid peculiarities in the text of your Knidian volume, if I could see a few pages of its proposed text (i.e. pages that cited names derived from stamps) before the text becomes camera-ready. I am sorry, I cannot undertake a general check of your Knidian names (no time). I suggest attention to my article in Hesperia 1985.

I look forward to seeing you in October.

VRG/czr

24. VIII. 88

I am now sorry I bothered to give PMF
 one unpublished material. Even £250! would
 not pay for the trouble it has been! and
 what has come out ^{in print} is more confusion than
 information. This, on looking through the
 correspondence, & write yesterday's letter to him.
 As for any published acknowledgments from him,
 THEY WILL TEND TO DIMINISH MY GLORY

Miss V. Grace,
American School of Classical Studies,
Hodos Suedias 54,
ATHENS GR106-76,
Greece

9 August, 1988

Dear Virginia,

Thank you for your letter, and for the enclosed xerox from Miss Kontorini (it joins a xerox of a letter of yours to her in my file, of 17 December, 1975). No: she has not written to me, and since the letter is not addressed to me, I shall not write to her.

(checked in John)

Your own letter led me once again to examine our labyrinthine file of correspondence. I do not see that at any point I had assumed, or wished to create the assumption in other people, that all the items entered as "Ag.Inv." were Agora finds. The formula I expressed in my letter of 20 March 1978 regarding the use of "U.P.Ag." or "Ag.Inv.no." met with your general approval in your reply of 19 June 1978. You said: 'I think we shall have to stick to this (sc. formula)'. It was an attempt on both our parts to find a formula that would indicate that the material and the use of it lay with you, and, as I explained in the Introduction to the Volume, we used it in the form you had made available without significant alteration. It was a convenient way of indicating where critically sifted data could be found. The system was not ideal, but, as you said in your letter of 13 October 1980, postscript, 'The list (which you provided) is not ... for any kind of publication except that the individual entries may take their place in your lexicon. The work we here have put into it gives us the right to give it its first publication in a much more controlled and finished form than it now has'; cf. my corresponding reply of 15 November, para. 4.

9 agreed to 1st, not 2nd

joined

77

I am indeed sorry if Miss Kontorini is confused, but she must be very simple if she thinks that the items referred to are stone-inscriptions, which, in any case, are in principle excluded, with a few exceptions, from the *Lexicon* (see *Introd.* p. viii). However, if you like to draft a corrigendum for the next volume I will gladly include it, though it will not, of course, appear for some time. The use of the term 'Study no.' is new to me, but I do not see any objection to its use for the future. You will understand, I am sure, that with camera-ready copy, corrections cannot be made in the body of the text itself. Therefore, whatever formula you devise will have to be used for future volumes only. I hope, as editor, that, if you decide on this course, it will not cause confusion to those who read corrigenda less carefully than they should.

72 (Aug. 25)

With regard to future volumes, Vol. II is an onomastikon of Attika, on which I have not personally been engaged, but will (I take it) contain no amphora-stamps. Vol. III, which is now being edited here,

contains the material from the Peloponnese and Mainland Greece south of Macedonia (see Introd. to vol. I, p. vii). It should, therefore, include the names from amphora-handles from Corinth. I have not seen Miss Koehler's dissertation, but I have her address as given in your letter of 5 October 1977; in any case, if the work was printed, or published in a microfilm series, or in any other way, we can, no doubt, get hold of it.

It is good of you to offer to check our Knidian names. We have a large collection of them from you sent at different dates, from 1969 and from EAD, and a letter from you of 6 September 1978. We have not yet computerised this material, which will appear in Vol. V (cities of the Asia Minor coast), but we are now adopting a policy of computerising large blocks of material from this region, as opportunity arises, and we have done it already for, e.g. Ephesos and Miletus, and there is no reason why we should not tackle Knidos: we have a large epigraphical and numismatic file of Knidians. The summer, such as it is, is upon us, and, like everybody else, we are understaffed, and so it is perhaps not the best time to start a new, largish chunk of material, but we will see what we can do. It would probably be most helpful to you to have a complete file, from which you could make comparisons for homonyms etc., and we could mark the handles for ready reference. The material would be unedited, with two consequences (i) that we would greatly welcome any help you could give us in updating the handle part of it, and (ii) that it would have to be regarded as confidential, not because I personally have any proprietorial feeling about it, but because if I have not edited it, I am not prepared to guarantee the entry as the best possible.

Induced not
See MSBTF and

In answer to your question why Theaidetos has a precise date and his fabricant a wider bracket, we gave Hippocrates a longer lease of life than the closely-dated eponym because you said in your article that Hippocrates's 'career' can be followed to probably the middle of the second century, B.C.' and 'fiiB' seemed to correspond to that.

Why does it seem to correspond?
as I saw
with

I am now studying the epigraphical material from Magna Graecia, among other regions, pleasantly remote from Rhodes, Delos and Crete, but near enough to Epirus to feel at home. Have you stamps from Campania? Or Bruttium? Or Calabria? If so, we shall be glad to hear of them! Is the situation regarding possible Corcyrean handles other than it was when you wrote your note in *Hesperia*, 40, 1971, p. 74, note 56? (X)

You certainly had a hot spell in August, and I kept away. I hope to be in Athens some time in October, and will ring you up in the hope that we can meet.

Yours ever,

Pen

Further inquiries based on

PMF lexicon "Ag. inv. R" "numbers"

- 1.) First was letter to John Camp from Kondorin
- 2.) Yesterday J. Diamant came with an inquiry from Kommos - Mrs. Joe Shaw - about "Ag. Inv. R 400", Nikasíov. Find just on SAIT with this name filed for U. Agora.

27. VII. 88

- 3.) See correspondence with Eric Szabo on hand of Nikasíov found in Kommos (Crete). His letter ^{girl (1. VII. 88)} refers to a conversation I had ^{at the} with ^{Margaret Miller} his wife, on late July in which she inquired about an Agora inventory ref. To Nikasíov she had found in Frazer & Matthews.

file C. Carbone
Athens, July 21, 1988

Dear Peter,

I enclose a photocopy of a letter received recently by John Camp, from a Miss Kondorini whom I believe you know; she has been a pupil of Robert, and had published inscriptions that are in Rhodes. Perhaps she has written to you too about this matter.

The R and RE lists of ours that you have are of course working lists of Rhodian fabricant and eponym names, assembled in 1965 to facilitate sorting the heaps in Alexandria. The numbered items are just names, not finds that might be inventoried, at the Agora or any where else. Quite a few of the names are not represented on Agora finds.

I believe that in modern, computer, language, numbers of this kind are called Study Numbers. If you wanted to indicate the source of a date quoted, you might have said Grace Study no. 43, or whatever.

At any rate, the usage in the text is misleading, and the explanation in the introduction is not as clear as day. Can you publish a corrigendum ~~in~~ note about this? Not much good of course unless it is placed to catch the eye of the right people. Incidental: I am impressed that you dated the eponym ΘΕΑΙΑΗΤΟΣ by so recent a publication as my article in Hesperia 1985. But then why has the fabricant on the other handle of the jar (ΙΙΠΟΚΡΑΤΗΣ) got nothing closer than ii cent.? and no nice reference to several pages about him in the same article.

Would it be a good idea to send me a few pages of the volume to include persons from Knidos? i.e. when some "ms." is ready.

I bet it is nice and cool in England.

Yours,

Athens, July 21, 1988

Dear Peter,

I enclose a photocopy of a letter received recently by John Camp, from a Miss Kondorini whom I believe you know; she has been a pupil of Robert, and had published inscriptions that are in Rhodes. Perhaps she has written to you too about this matter.

I believe that in modern, computer, language, numbers of this kind are called Study Numbers. If you wanted to indicate the source of a date quoted, you might have said Grace Study np. 43, or whatever.

At any rate, the usage in the text is misleading, and the explanation in the introduction is not as clear as day. Can you publish a corrigendum ~~in~~ note about this? Not much good of course unless it is placed to catch the eye of the right people. Incidental: I am impressed that you dated the eponym ΘΕΑΙΑΗΤΟΣ by so recent a publication as my article in Hesperia 1985. But then why has the fabricant on the other handle of the jar (ΙΙΠΙΟΚΡΑΤΗΣ) got nothing closer than ii cent.? and no nice reference to several pages about him in the same article.

Would it be a good idea to send me a few pages of the volume to include persons from Knidos? i.e. when some "ms." is ready.

I bet it is nice and cool in England.

Yours,

David

Agora, July 7, 1988

Dear John,

I don't know why you should assume the persons listed by Miss Kondorini in her letter to you of June 17 are eponyms. In fact, they are drawn from our general list of Rhodian fabricants (with suggested dates) of which Fraser has a copy. It just happens that most of those she cites in her letter appear (with various dates) both in our R (fabricant) and RE (eponym) Rhodian study lists. Not known at all as eponyms in stamps are the following from her list: APIETOMBPOTOZ, APIETOMHAHZ, and APIETONIKOZ. They are fabricants only.

More interesting is the fact that the items in our R list have been interpreted by Fraser in the Lexicon Miss. K. refers to as Agora Inventory numbers. This identification appearing widely among his citations on persons from Rhodes is all his own, and did not appear in preliminary texts which he asked me to vet. He is not an archeologist, and does not know what an inventory number is. The Agora may receive other inquiries based on these "Agora inventory" numbers. Requests for photographs.

I return Miss K.'s letter to you. I am afraid it has got marked up a bit.

To P.M. Fran

Dear Peter,

Thank you for your letter, and then for the first volume of your Lexicon. The book arrived two or three days ago. You must be very pleased with it. It is handsomely produced, and obviously presents the results of a great deal of work. It should encourage the support of printing the rest, if there was any problem about that.

A difference in plan from Pape is of course the arrangement of the material in the volumes, the fact that you will begin the alphabet again for each (?) of the various areas. Will there be an index in the last volume?

I am sure that many people will be interested to see my copy, which I will

Philippa and I have had time to study it a bit.

OX
11/11/85-11/12/85

I am sorry that, as you feared, - sending offprints about the Hellenistic Wreck amphoras before my second trip to the US (1986). You did have a copy of at least part of the proof that pretty well covered (did it not?) what was in the article about Rhodians. I did not send an index ^{for publication} with the ms., as I thought it would not be welcome with so short a piece; but when I saw Empereur's for the same volume, I wished I had. I enclose a longhand index.

With regard to this article of mine: the date proposed for the wreck - ca. 280-275 B.C., see finally p. 561 of the offprint - this date is I think rather generally accepted, cf. AJA 91, 1987, p. 43, in the general summary on the wreck so far as it can be known from the sampling so far raised. This summary includes an appendix with further notes on the amphoras by C.G. Koehler and Cemal Pulak, who have actually seen them, which I have not. There have of course been reservations about calling the shipload one of Zenon's. I am still serious about that,

To P.M. Fourn

Dear Peter,

Thank you for your letter, and then for the first volume of your Lexicon. The book arrived two or three days ago. You must be very pleased with it. It is handsomely produced, and obviously presents the results of a great deal of work. It should encourage the support of printing the rest, if there was any problem about that.

A difference in plan from Pape is of course the arrangement of the material in the volumes, the fact that you will begin the alphabet again for each (?) of the various areas. Will there be an index in the last volume?

I am sure that many people will be interested to see my copy, which I will bring to the Agora as soon as Philippa and I have had time to study it a bit. Recent arrivals at the Agora are the Shears and Eve Harrison, here on a sabbatical. Leslie Shear is now to be here for the second half of the academic year as well as for the summer.

I am sorry that, as you feared, I did not finish sending offprints about the Hellenistic Wreck amphoras before my second trip to the US (1986). You did have a copy of at least part of the proof that pretty well covered (did it not?) what was in the article about Rhodians. I did not send an index ^{for publication} with the ms., as I thought it would not be welcome with so short a piece; but when I saw Empereur's for the same volume, I wished I had. I enclose a longhand index.

With regard to this article of mine: the date proposed for the wreck - ca. 280-275 B.C., see finally p. 561 of the offprint - this date is I think rather generally accepted, cf. AJA 91, 1987, p. 43, in the general summary on the wreck so far as it can be known from the sampling so far raised. This summary includes an appendix with further notes on the amphoras by C.G. Koehler and Cemal Pulak, who have actually seen them, which I have not. There have of course been reservations about calling the shipload one of Zenon's. I am still serious about that,

my
but ~~the~~ association of the jar no. 17 (fig.5, p. 559) with the operations of Zenon and Co. that are covered by the papyri (259 B.C. and later) may be called into question by ~~emperors~~ recent discovery of, he says, 10 or 11 stamps from the same die as my ²⁸ no. 24 (same figure) ^{fig.5} On the Datcha peninsula in what he takes to be a pottery works. He has not yet published this material. If it turns out that my no. 24 was made on Datcha, why then so was my no. 21 (which has a stamp just like my 24, but it did not get photographed, only rubbed); and if my 21 was made there, why then apparently also my 17, which is really the same shape as my 21. And 17 has the N^o1 stamp (no.20). (All these, see my fig.5).

One would think that such puzzles ought to be solvable by tests of the clay, but the results of such tests never seem clear and definite, except for characteristic Rhodian. These seem to come out the same, no matter who does the tests. See EAD 27, p.320, note 1.

The pollution has become so bad here that only half the cars and taxis are ^{in the city center} allowed to circulate ^{Monday through Friday} from 7:00 a.m. to 8:00 p.m. (those with odd numbers on dates with odd numbers). Two cars are available to me, but both have odd numbers. So this week I only got to go to the Stoa on Feb.9 and 11 in a regular way. I am here today, Feb.13, a Saturday, by special permission of good Mrs. Kyrkou in the office downstairs; but she asked me please not to come on any other Saturdays. The city rule about odds and evens will probably stick, as I should think the majority of voters probably like it better that way, with less traffic as well as less stink.

We look forward to seeing you here later in the season.

Yours,

Ugin

A note on your Vol.I. The R numbers you cite for identifying Rhodian amphora fabricants actually identify Rhodian fabricant names, and were assigned to facilitate sorting material in Alexandria. Quite a few have not been found in the Agora. An inventory number identifies an individual object. R numbers are not Agora inventory numbers. *Some did not see that earlier.*

19 December 1987

Dear Virginia,

A copy of the Lexicon of Greek Personal Names vol. I was despatched to you a few days ago. I hope it reaches you safely over the Christmas holidays. It is also my hope that you will enjoy looking at it, and that you will not feel we have taken liberties with your material. I assure you that nothing was intentionally altered. On behalf of the British Academy no less than on my own account I would like to thank you most warmly for all your collaboration & 'Bereitswilligkeit'.

We hope now that the first vol. I out there will move much more quickly. Vol. II (Attica), which was been prepared by M. J. Osborne, will, we hope, be completed by the end of this year, and we are deeply involved in editing Vol. III - the rest of Greece S. of Macedonia - work is well advanced on it. You will not, I think, have condemnations from us on these volumes!

I hope you are keeping well and managing to get about. I shall be in Athens, I think, in March and hope I may see you.

With best wishes for Christmas and the New Year,

Yours ever

Deke

Prow-stamp series

also in RHODIAN EPONYMS (INDIVIDUAL)

To P.M.Fraser

Dear Peter:

Thank you for your letter of January 20.

A few names in Rhodian stamps have had their dates somewhat sharpened in my article for the French Amphora Colloquium. I enclose photocopies of pp. 14 and 15 of the proof, where under numbers 22, 23, 27, and 28 are named two fabricants and some ten eponyms who are dated ca mid 3rd century (most of them), and a little after 240 B.C. (the eponyms ΕΥΚΛΗΣ 2nd, ΚΑΛΛΙΚΡΑΤΗΣ 1st and ΦΙΛΩΝΙΔΑΣ, and part of the years of the fabricant ΠΟΤΑΜΟΚΛΗΣ). The typed ^(which) lists you have placed them in Periods I and II. Those in I should be late I, and those in II, early II. Note that the type of the fabricant ΔΗΜΗΤΡΙΟΣ published here, thought to date a little before 240 B.C., is new, and that in general the name spelled thus is rare in Rhodian stamps.

You might have another look at my letter to you of 13.X.80, which recommends more checking than had been done for the printout you had then sent me. Too many errors turned up in a spot check I made of that printout. Such errors would matter more than missing a few modernizations,

The stamp ~~series~~ series with names surrounding a prow (Hesperia 1971, pl.15, nos. 16 and 17) do not seem to mark amphoras made in Samos. This was already suspected before that article came out, see the addendum on p.84, where a 4th century context is reported, whereas for the Samian series we needed a 3rd century shape to go with the papyros of 259 B.C., see *ibid.* pp. 82-83. Prof. Börker of Erlangen thinks the prow-stamped jars are an early kind of Knidian, as he must have said in his paper at the colloquium, but of course I didn't get to those papers.

I look forward to seeing you at the time of the Centenary.

Yours,

American School of Classical Studies
54 Swedias Street, Athens 106 76, Greece

 (She does take a photograph)

Dear Virginia,

I heard a day or two ago from Michael Osborne that you were not only back in Athens and flourishing, but that you had also had a birthday celebration. Congratulations on both scores! I hope you are able to get about a certain amount now, at least to the Agora. Michael gave me what news there was from Athens - I hope to be able to come to the celebrations at the British School in the summer.

Our onomastikon is now in the Data-Base, and we hope to deliver it to the OUP for publication by the end of March. It has been a long time, but the setting up of this volume does not have to be repeated for subsequent ones. Michael Osborne's Attic volume, now far advanced, will probably be our Volume II, while Volume III, done wholly here, will comprise the Peloponnese + Northern + Western Greece as far as Thessaly. We envisage getting the Peloponnese-Boetia-Thessaly into the Data-Base by this autumn, so things are not going too badly.

I hope our amphora-names, particularly the Rhodian, are still OK, i.e. broadly speaking as you gave them to us before, with corrected dates in your later publications. We have no further news of Mrs. Matheson, so our Coan names may be incomplete. I have said in the Preface that you are not now committed to the view that the 'Samian' handles are Samian, and I hope that is still true. If you want to change anything there is still time!

With all good wishes.

Yours ever
Peter
 P.M. Fraser

All Souls College,

OX1 4AL Telephone 722251

2 February, 1984.

Dear Mrs. Matheson,

Hector Catling has suggested that I should write to you about the names of persons on Coan amphorae handles, which we would like to include in our Lexicon of Greek Personal Names, Vol. I. For the handles of Cos we have only a list which Virginia kindly send me in 1958 (long before we began work on our Lexicon in 1973), and I imagine that the list has received some accretions since then. If you felt you could let us have them we should be very grateful. We have already incorporated the Rhodian material which Virginia let us have a few years ago into our main Rhodian file.

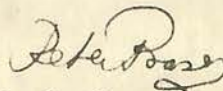

I see from a note of Virginia's in EAD 27 that you also have a small file of Chian names. Since our Chian file is also otherwise complete it seems a pity to omit them.

Tony Andrewes said that he thought you might be coming to Oxford shortly. If that is indeed so, we should be delighted to give you access to all our material for Vol. I, and to show you our operations.

I enclose a print-out copy of the File of Coan stamps that we have for you to compare with your material. If you wish to keep it please do so - we have others, and cannot make use of this as it stands.

I hope Virginia is well.

Yours sincerely,

P. M. Fraser.

Mrs. M. Matheson,

19.01

4 December 1982

Dear Virginia,

We have been trying to tidy up the onomastic file of Kos, which as given in S. Sherwin White's book is far complete (not in respect of handles, which is what I am really worrying about, but of names in texts and inscriptions). We now need, if possible, to decide finally on what names on handles should be omitted if any. I have an old list of yours of 4.12.1958, with accompanying letter of 17 Febry of that year. I have marked that list up at various times for parallels in the Kos material published since then. I see however from your letter of Nov. 10. 1979 (the letter is headed 'Nov. 10. 1070', but the first paragraph refers to a letter of June of 25.X.79, so I suppose it is 1979!) that you would be prepared to let us have your Kos file as it now stands, and if this offer still stands we would certainly like to take advantage of it. It would be treated with the same confidentiality as all our other unpublished material, though, correspondingly, we would give all the refs. you wanted as we have done for Rhodes. You say this could be done 'with comparatively little trouble', and I would not ask you if I thought it would cause you as much work as the Rhodian did. It is also possible (since I think our Kos onomasticon is effectively otherwise complete) that we might be able to add parallels, or (if you wanted it) send you a "print-out" of it.

Material for our vol I is, now, otherwise to hand, apart from a few coins, and there seems a good chance that we shall

get it to press this year. It will contain all the islands (except the Ionian Islands which come in vol. II) and Cyrenaica. It is by much a work of collaboration, at least for some parts, and this is a considerable relief since expert hands have been at work on difficult islands and areas.

I heard today, indirectly, that you may be coming to UK ^{for} the Christmas season. I am going to Philadelphia to conduct an hour-long seminar on the Lexicon, on Boxing Day, so I may miss you, but I shall only be gone a very few days.

To write to Kos, I should say that I shall not attempt to use the old list, as things at present stand, so please do not be worried on that account. ~~them~~

Yours ever

Peter

P.S. If your Corpus is likely to be out in the next few months we can of course wait for that, and make slips out from that.

American School of Classical Studies
54 Swedias St.
Athens, 140 Greece

August 26, 1982

Dear Peter,

For your letter of May 17, thank you for your offer to send me your processed version of our list of Rhodian fabricants. I would not have time, now, to work on this further, so perhaps not worth while to send it.

In connection with these lists of stamps names, I was surprised to hear from David French that you had shown him Brashinsky's list of the Sinopean names.

I was in America for most of June, hence am perhaps a little more than before arrears with correspondence. Thank you for what you say about the article on Benaki's Petos Group. It is a pity that Benaki and Empereur did not meet.

Yours,

A couple of notes for possible correction:

1) In connection with your exclusion of most names appearing on Koan handles from your Koan name lists, Maria observed that both names from Delos 27, E 241, have been entered in the Koan onomastikon, although of course only one can be an eponym in this case. (I cannot check this entry, as she is away and I don't find the onomastikon).

2) In case your co-workers sometimes take names straight from an index, let me call attention to the entry ΘΕΡΞΑΝΑΡΟΣ ΑΡΙΣΤΟΚΛΕΥΣ, Dunant and Pouilloux, p.280: not only is he not an eponym of Rhodes but he is a non-person, as can be seen by referring to the text.

All Souls College,
Oxford

OX1 4AL Telephone 722251

17 May 1982

Dear Virginia,

I received the other day an offprint from J-Y Empereur, of your joint article in B/FAO 81, Supp. It was most interesting, to have this group isolated.

I have been meaning to write to you for some time to ask you if you would like a copy of our processed list of Rhodian fabricants, which has now been through the computer along with the rest of the Rhodian material (nearly 20,000 names). The list of fabricants is basically as you gave it to us, but you might like to have a copy (not very bulky), and if you wished to register any alterations this would be the time to do it. The eponyms are embodied in a larger Rhodia file, & you could have that too, if you would like it, but you would have to wade through some extraneous matter to get at them. Let me know. Once again, your material stands virtually as you gave it to us.

I saw the Catlins in Peiraieus the other day, & was glad to hear that you were well. I also had a postcard from Homer & Dorothy, & wonder if they are in Athens yet. If so, I hope you will thank them for me.

Yours ever
Peter

16 April 1981

Dear Miss Matheson,

Thank you very much for your letter on behalf of Miss Grace. I am very grateful for her opinion that a date 'c. 316' will serve as a beginning date. The phronarchi from Khidian stamps have, inevitably, I think, to be regarded as 'of unknown origin'. If their origin can be established with any certainty we would of course alter it appropriately.

Please give Miss Grace my warmest greetings.

Yours sincerely

Peter Fraser

(posted 26.iii.81)

~~The~~

The American School of Classical Studies,
 54 Swedias Street,
 Athens 140, ~~ccc~~
 GREECE

Dear Mr Fraser,

Miss Grace has asked me to write to you on her behalf about some of the points raised in your letter to her of 15 November, 1980.

In particular about the dating of Period I, she would not be surprised if there were stamped Rhodian amphoras as early as 325, but the most likely candidates (items from the Pipinoy Apothetes found with red figure kraters) are not in the list she gave you: they read ~~ΑΙΩ~~, or a monogram, or an abbreviation on pieces that are not at all surely Rhodian jars. (There are also some fragments of definitely non-Rhodian jars). So perhaps it would be better to say c. 310. as you suggest.

She also wonders where you have put the names of phrourarchoi from Knidian stamps; are they all matched in your Rhodian name list? In Peraea (p. 93 last line) you refer to them as "mercenary leaders rather than Rhodian citizens", and Miss Grace also thinks that they were not necessarily Rhodians. Many of these names do not occur in Rhodian stamps.

Yours sincerely.

Phiippa Matheson (for Miss V. Grace)

Dear Peter,

I would not be surprised if there were
 stamped Rhodian amphorae as early as 325,
 but ~~there are~~ the most likely candidates
 known to me up to now are those from
 for the Paphos apothetes with ^{red figure} 2 of pasteros,
 and they do not include any of the names
 I gave you, but just AΠΟΣ(, monograms,
 and a couple of abbreviations or pieces that
 are not at all sure for Rhodian jars.
 (There are also some frags. of definitely
 non-Rhodian jars.) So perhaps
 but for you to say c. 310 as suggested.

For ΑΓΟΡΑΝΑΞ, in the Lexicon

That is your problem, but how do you
justify the uncomplex preceding to long syllable
at the end? I don't like it for
myself, and I stick to Homer's Agamemnon.

25. XI 80

Not known that Hiller; in his list of
Ph. epigrams, does list Ἀγοπάραι !!!

Hiller also has Ἀγοπάραι

28. XI 80

In one of his letters or dissertations, he says
that φρ. in kind stamps are Phodians, which
I don't think he did not use & think.*
Does he include all these φρ. names in his
expanded Ph. name list? - certainly many
are not in Ph. stamps

LEXICON OF GREEK PERSONAL NAMES

(under the auspices of the British Academy)

rec'd Alex
Nov. 12

Summary Report, 1979/80

This Summary is intended to indicate the progress of the project, in the last year, while the accompanying two tables (Annexes A and B) tabulate the present stage of the regional onomastika individually. As indicated previously, we are pleased to offer information on individual regions that have been covered, but it will be appreciated that it is not possible to provide answers regarding the occurrence (or non-occurrence) of a name over the entire regions covered until these have been put on the computer.

Literary Sources. Most of the material has now been "slipped", and is being, and in many cases has been, distributed regionally. Revision of this material, particularly lexicographical Sources, continues. Work on the selected Christian Sources chosen for inclusion is now complete except for that on the Acta Sanctorum, half of which is completed.

Epigraphical Sources. The slipping of mainland Greece and the Balkans has been largely completed. Dr. Osborne, after a final visit to Princeton, for which the Committee once again must express its gratitude to the Institute of Advanced Study for the

provision of valuable assistance, has now completed the compilation of Attic material, and it remains to sort this into its final form. There is a rough total of some 100,000 entries. Dr. Griffin has now completed the onomastikon of Delphi, and will be occupied next year with the revision and completion of the files of the Peloponnese and Boeotia (the first regions covered by the project). The slipping of Thessaly remains half-done. Except for Euboea, work on the islands has now been finished, with Dr. Jeffery's and Miss Pitt's completion of the Cretan onomastikon, and the very welcome incorporation from the Agora files of Miss Grace's material relating to Rhodian amphora-fabricants. Further north, beyond Macedonia (now being computerized), the material (Greek and Latin) up to and including Moesia Superior and coastal Dalmatia is the only material outstanding, and a new collaborator, Mr. Emilio Marin of the Archaeological Museum of Split, has undertaken the latter region (notably the Dalmatian Islands). Professor Bodor of Cluj has provided the material, largely Greek names in Latin, from Dacia. In the western Mediterranean Dr. Crawford has begun work on Magna Graecia and Sicily and Miss Reynolds on Cyrenaica and N. Africa.

In Asia Minor progress over the last year has been very satisfactory. Miss Pitts has completed the onomastikon of Miletos as well as of other cities of Ionia, and is now working on the Lydian

Just
acknowledged
(still done with
any thanks?)

hinterland. The Committee wishes to thank Dr. D. Knibbe of the Austrian Archaeological Institute, who very generously provided the Lexicon with a complete index of the inscriptions of Ephesus (now appearing in Professor Merkelbach's Corpus of Inscriptions of the Cities of Asia Minor), which we were able to photo-copy. Miss Pitts has now entered these on cards and thus the most formidable single obstacle to the rapid progress of our work in the coastal area is surmounted. For Smyrna Dr. G. Petzl has generously undertaken to provide similar indexes as they become available, and once more we are saved a considerable expense of time, and at the same time profit from the work of the foremost authority on the material. In Caria Dr. E. Rice has finished her work on the coastal area, and is now dealing with the inland cities east of the Marsyas River (the area west of that having been done for us by Mr. Hornblower, as reported last year). Dr. S. Jameson has undertaken to complete her work on Lycia and Pamphylia, and Dr. Mitchell his on Mysia. For the rest of Asia Minor we hope to receive assistance from the members of the RECAM team of the British Institute of Ankara, in the first place for Pontus and Paphlagonia.

would say that again

Syria, Palestine, Egypt. These regions will, on present reckoning, fall into Vol. II, and progress is not given in detail here. Dr. B. Isaac, of Tel-Aviv University, and Monsieur M. Sartre of the

University of Tours, are continuing their work on Palestine and Syria respectively.

A.3. Papyri. Dr. J. Rea continues to work single-handed in this field, in the absence of any assistance. All 'foreigners' required for our Greek files have meanwhile been extracted by Miss Rice.

4. Coins. Mr. C. Howgego has continued work on this material, especially for Ionia and Caria in the Imperial period, in addition the large corpus of names on the coinage of Dalmatia has now been slipped and computerized. In the numismatic field as a whole a considerable amount of research remains to be done, and Dr. P. Kinns has provided the names on the hellenistic coins of Teos, Lebedos and Colophon, in addition to those of Erythrae already provided by him.

A full list of material now on file but not computerized is given on Annex A.

B. Computer Programme. The emphasis of our work is shifting increasingly to work on the computer and to editing print-outs, and the availability of extra skilled operators on the computer and in editing has enabled Mr. Ashplant to step up our output considerably

To P. M. Fraser

Dear Peter,

The printouts sent with your letter of July 31 last have occupied a number of days here at various times during the summer and autumn. I have no more time at present to work on them. I will tell you what I have noticed so far.

In particular, the dating needs to be made consistent with/in this lot, and it should correspond with what I assume you have used in your eponym list, of which we have not seen printouts. We don't want to end one period at 250 and start the next at 240: compare your 19/5 etc. with your 19/11 etc. For the equivalents we agreed on when you were preparing the eponym slips, see our correspondence of January 1978 (your letter of 8.I and mine of 25.I). You proposed to begin Period I as "late 4th". I do not know the source of the "325" with which this period starts in the printouts. I have now enough eponym names to take me a little back of 300 at which point they are pinned by the jars in the Kyrenia wreck, a few of which have name stamps. A slightly earlier deposit (in Rhodes, the Pipinou Apothetes; it included late redfigurē) has parts of amphoras with monogram stamps, and stamps naming AAZE(, which I have shown you, at one time or another. (Do you want to include this AAZE(?) To correct these dates in the printout you will need to have quite a check made, during which a variety of errors in dating should be caught, e.g. ANTIFONOS in 19/52 is dated there 220-175, while ANTIOASINIAAE in 19/69 is dated 200 - 175, but the 19/19 are both Period III in the typed list I gave you. In 19/2, again, the break is put at 210. 220 is clearly too early (cf. EAD 27, p. 291); 210 is better; 200 is ok if you want to be more approximate. But I suppose you want consistency, at any rate, and not to suggest non-existent distinctions. I suggest you lay out the equivalents as you did in your letter of 8.I.78:

Period I: late IV B.C. - ca. 240

II: ca. 240 - 210

or ca. 240 - late III

Period III: ca. 210 - 175

or late III to ca. 175

IV: ca. 175 - 150

V: second half of 2nd B.C.

VI: late II - early 1st B.C.

VII: 1st B.C.

Then get somebody to check and correct as necessary all the date entries from the Periods, as given in my typed fabricant list, to the printouts. They will find for instance that AAEZANAPOZ in 19/35 has been put into Period I, whereas the name occurs only in V and VI. They will find APIZTIEN of R 92 C given the early date that belongs to R 92 A and B (quite rightly omitted by you as probably the eponym), whereas he is a rather wellknown fabricant of the late 2nd century (IIC in my typescript); a good reference for him would be Tarsus I, p. 140 and fig. 114, no. 17. They will find no doubt many more. It is impossible to come out accurate in such a job as this without a great deal of checking.

In general on references, could the citations be shortened? You clearly have some short titles (e.g. Nilsson, with no title, no date, no page references, just the number), why not have more? E.g. "EAD 27 no. E 1" is enough to put for the EAD reference for AFOPANAE, and one looks (as in the case of "Nilsson") at the short-title list to see how it works. (19/23, 24, 25.) Then, for this name there is more citation than is useful. Cite EAD 27, which has a summary on the style, etc., of this fabricant, as well as the reading of the name; also Ath. Mitt. 1974 which gives (p. 200) a specific corrected date for his activity or a known part of it (221-199 B.C.) and Amphoras fig. 25 because it has a good photograph of a stamp with this name, whereas the others have not. Why cite Nilsson's catalogue of the Lindes collection, where the names are available alphabetically, when dates and photographs can be cited elsewhere? (Note to the point to mention when a name is not in Nilsson's catalogue, and give a page reference to his introduction if you find it there.) For AFOPANAE, why cite Hesperia III when we have the much better references in EAD and Ath. Mitt. ? Incidentally I would use as the dates of this fabricant those from Ath. Mitt. rather than those super-

seded thereby. Finally on AFOPANAE, how do you justify a circumflex on that short syllable? I assumed it was a slip, but find it also on KABANAE (20/38).

On publications, cite my pamphlet Amphoras in its revised edition, of 1979. I think there won't be changes in your citations. I would say, don't cite the Delos BCH 1952 article, except for its few illustrated items, unless there is nothing else; the fabricant list there is just a list, has no dates.

Here are some other corrigenda noticed in a very partial check of your material.

19/3-4 AFAΘBOYAOZ R 4 B is distinctively of Period V, not to be included under your 2/1B but under I suppose your S2B (like, e.g., ANAEIHIAAZ). Possibly it is the same man as used the later types (R 4 C-F) but then you have to start this lot before the late 2nd - early 1st.

19/12 AFAΘZN read here should be AFHZN

19/26 a good reference for AΘANOATOZ is in Pergamon VIII.

19/27 AΘOZ (R 30) I now believe is probably the genitive of AΘOZ. It is true that Nilsson did not take it that way, but lists him under "adjectifs comme noms" (p. 93) rather than "noms geographiques" (p. 97). But we have very similar circular types with the head of Helios, contemporary with R 30, that are signed TMOAOY ~~xxxxxx~~ (Your 20/223.)

after 19/28, AINEAZ is omitted. Is this because in one type the name is qualified by METOIKOZ? Wherever you put this, cite my text in my Kyme chapter (pp.93-94).

19/43 ANAEIAAZ was listed by me as Ic, i.e. late I, and I would now say early II. Better to call him 240-210, or ca. 240 as in 19/64.

19/55 ANTIAOXOZ is the eponym, so omit. See asterisk.

after 19/64, there is an omission of R 72 ^C who is later.

19/102 APIZTONIKOZ (or APIZTONEIKOZ) R 105 The reference to BCH 1952 is wrong, it should read nos. 18 and 19 (not no. 17). Note the date here is also wrong - he is (late) Period I, as in my typescript.

19/121 AΣKAAHIAAAZ is the way it reads, with ^{four} ~~three~~ alphas.

In a fairly detailed check I made with MZII, we got through 19/125. The rest

of my comment here is from a spot check only.

19/141 "BOYΘHPΘZ" I don't now believe in this resolution of the monogram,
(BOYΘHPΘZ)
since we already have BOHΘ in stamps of the same period, so it should not be supported
by my fabricant number.

19/248 EYZEYZ The printout omits his date. A sort of reference for him:
Crowfoot, The Objects from Samaria, London, 1957, p.383. (Supplied to Crowfoot by us.)

Omit 20/44, 20/62 and 20/96, as R 319, R 343, and R 371 all have asterisks, and
no doubt name the eponyms of these names.

20/67 MAPZYAZ R 350 No date is given in my typescript. ^{The main} ~~His~~ activity seems to
have been ~~xxxxx~~ 1/4 of 2nd century B.C., but he or his firm had some late types in
the second quarter of the 2nd. These types of Period IV are discussed in EAD 27,
under E 37 (p.314). In the printout the reference is correct, but the text seems to
have been hastily read and the wrong date extracted: we know of no types of a
MAPZYAZ datable later than mid-2nd. There is some evidence for an earlier MAPZYAZ,
of Period II.

I am happy to take from you several rough breathings.

Yours,

This list is of course not for distribution, I think you understand, nor any
kind of publication except that the individual entries may take their places in
your lexicon. The work we here have put into it gives us the right to give it
its first publication in a much more controlled and finished form than it now
has.

American School of Classical Studies
54 Swedias Street, Athens 140, Greece

October 13, 1980

Dear Peter,

The printouts sent with your letter of July 31 last have occupied a number of days here at various times during the summer and autumn. I have no more time at present to work on them. I will tell you what I have noticed so far.

In particular, the dating needs to be made consistent with/in this lot, and it should correspond with what I assume you have used in your eponym list, of which we have not seen printouts. We don't want to end one period at 250 and start the next at 240: compare your 19/5 etc. with your 19/11 etc. For the equivalents we agreed on when you were preparing the eponym slips, see our correspondence of January 1978 (your letter of 8.I and mine of 25.I). You proposed to begin Period I as "late 4th". I do not know the source of the "325" with which this period starts in the printouts. I have now enough eponym names to take me a little back of 300 at which point they are pinned by the jars in the Kyrenia wreck, a few of which have name stamps. A slightly earlier deposit (in Rhodes, the Pipinou Apothetes: it included late refigure) has parts of amphoras with monogram stamps, and stamps naming AAZE(, which I have shown you, at one time or another. (Do you want to include this AAZE(?) To correct these dates in the printout you will need to have quite a check made, during which a variety of errors in dating should be caught, e.g. ANTIFONOS in 19/52 is dated there 220-175, while APOAAENIAAZ in 19/69 is dated 200 - 175, but they are both Period III in the typed list I gave you. In 19/19, again, the break is put at 210. 220 is clearly too early (cf. EAD 27, p. 291); 210 is better; 200 is ok if you want to be more approximate. But I suppose you want consistency, at any rate, and not to suggest non-existent distinctions. I suggest you lay out the equivalents as you did in your letter of 8.I.78:

Period I: late IV B.C. - ca. 240

II: ca. 240 - 210

or ca. 240 - late III

Period III: ca. 210 - 175

or late III to ca. 175

IV: ca. 175 - 150

V: second half of 2nd B.C.

VI: late II - early 1st B.C.

VII: 1st B.C.

Then get somebody to check and correct as necessary all the date entries from the Periods, as given in my typed fabricant list, to the printouts. They will find for instance that ΑΑΕΞΑΝΑΡΟΞ in 19/35 has been put into Period I, whereas the name occurs only in V and VI. They will find ΑΡΙΣΤΙΩΝ of R 92 C given the early date that belongs to R 92 A and B (quite rightly omitted by you as probably the eponym), whereas he is a rather wellknown fabricant of the late 2nd century (IIIc in my typescript); a good reference for him would be Tarsus I, p. 140 and fig. 114, no. 17. They will find no doubt many more. It is impossible to come out accurate in such a job as this without a great deal of checking.

In general on references, could the citations be shortened? You clearly have some short titles (e.g. Nilsson, with no title, no date, no page references, just the number), why not have more? E.g. "EAD 27 no. E 1" is enough to put for the EAD reference for ΑΓΟΠΑΝΑΞ, and one looks (as in the case of "Nilsson") at the short-title list to see how it works. (19/23, 24, 25.) Then, for this name there is more citation than is useful. Cite EAD 27, which has a summary on the style, etc., of this fabricant, as well as the reading of the name; also Ath. Mitt. 1974 which gives (p. 200) a specific corrected date for his activity or a known part of it (221-199 B.C.) and Amphoras fig. 25 because it has a good photograph of a stamp with this name, whereas the others have not. Why cite Nilsson's catalogue of the Lindos collection, where the names are available alphabetically, when dates and photographs can be cited elsewhere? (Note to the point to mention when a name is not in Nilsson's catalogue, and give a page reference to his introduction if you find it there.) For ΑΓΟΠΑΝΑΞ, why cite Hesperia III when we have the much better references in EAD and Ath. Mitt.? Incidentally I would use as the dates of this fabricant those from Ath. Mitt. rather than those super-

seded thereby. Finally on ΑΓΟΠΑΝΑΕ, how do you justify a circumflex on that short syllable? I assumed it was a slip, but find it also on ΚΑΕΑΝΑΕ (20/38).

On publications, cite my pamphlet Amphoras in its revised edition, of 1979. I think there won't be changes in your citations. I would say, don't cite the Delos BCH 1952 article, except for its few illustrated items, unless there is nothing else; the fabricant list there is just a list, has no dates.

Here are some other corrigenda noticed in a very partial check of your material.

19/3-4 ΑΓΑΘΟΒΟΥΛΟΣ R 4 B is distinctively of Period V, not to be included under your 2/1B but under I suppose your S2B (like, e.g., ΑΝΑΞΙΜΜΙΑΑΕ). Possibly it is the same man as used the later types (R 4 C-F) but then you have to start this lot before the late 2nd - early 1st.

19/12 ΑΓΑΘΩΝ read here should be ΑΓΗΜΩΝ

19/26 a good reference for ΑΘΑΝΟΑΤΟΣ is in Pergamon VIII.

19/27 ΑΘΩΟΣ (R 30) I now believe is probably the genitive of ΑΘΩΣ. It is true that Nilsson did not take it that way, but lists him under "adjectifs comme noms" (p. 93) rather than "noms geographiques" (p. 97). But we have very similar circular types with the head of Helios, contemporary with R 30, that are signed ΤΗΘΑΟΥ ~~ΕΛΙΟΣ~~ (Your 20/223.)

after 19/28, ΑΙΝΕΑΕ is omitted. Is this because in one type the name is qualified by ΜΕΤΟΙΚΟΣ? Wherever you put this, cite my text in my Kyme chapter (pp.93-94).

19/43 ΑΝΑΞΙΑΑΕ was listed by me as Ic, i.e. late I, and I would now say early II. Better to call him 240-210, or ca. 240 as in 19/64.

19/55 ΑΝΤΙΑΟΧΟΣ is the eponym, so omit. See asterisk.

after 19/64, there is an omission of R 72 ⁶ who is later.

19/102 ΑΡΙΣΤΟΝΙΚΟΣ (or ΑΡΙΣΤΟΝΕΙΚΟΣ) R 105 The reference to BCH 1952 is wrong, it should read nos. 18 and 19 (not no. 17). Note the date here is also wrong - he is (late) Period I, as in my typescript.

19/121 ΑΖΚΑΑΙΙΑΑΑΕ is the way it reads, with ^{four} three alphas.

In a fairly detailed check I made with MEI, we got through 19/125. The rest

of my comment here is from a spot check only.

19/141 "BOYOHPOZ" I don't now believe in this resolution of the monogram,
(BOYOHPOZ)
since we already have BOHO in stamps of the same period, so it should not be supported
by my fabricant number.

19/248 EYXEYX The printout omits his date. A sort of reference for him:
Crowfoot, The Objects from Samaria, London, 1957, p.383. (Supplied to Crowfoot by us.)

Omit 20/44, 20/62 and 20/96, as R 319, R 343, and R 371 all have asterisks, and
no doubt name the eponyms of these names.

20/67 MAPZYAZ R 350 No date is given in my typescript. ^{The main} ~~His~~ activity seems to
have been ~~mostly~~ 1/4 of 2nd century B.C., but he or his firm had some late types in
the second quarter of the 2nd. These types of Period IV are discussed in EAD 27,
under E 37 (p.314). In the printout the reference is correct, but the text seems to
have been hastily read and the wrong date extracted: we know of no types of a
MAPZYAZ datable later than mid-2nd. There is some evidence for an earlier MAPZYAZ,
of Period II.

I am happy to take from you several rough breathings.

Yours,

This list is of course not for distribution, I think you understand, nor any
kind of publication except that the individual entries may take their places in
your lexicon. The work we here have put into it gives us the right to give it
its first publication in a much more controlled and finished form than it now
has.

9.X.80

Dear Peter,

The printouts sent with your letter of July 31 last have occupied a number of days here at various times during the summer and autumn. I have no more time at present to work on them. I will tell you what I have noticed so far.

In particular,
First of all, the dating needs to be made consistent within this list, and it should correspond with what I assume you have used in the eponym list, ^{of} which we have not yet seen printouts. We don't want to end one period at 250 and start the next at 240: compare your line 5 (etc.) with your line 11 (etc.). For the equivalents we agreed on for the Periods when you were preparing the eponym list and slips, *(you letter 18.12.78 and mine 12.1.78)*, see our correspondence of January 1978. For Period I, we have there *(yours)* "Late 4th" or *(mine)* "End of 4th" to ca. 240 B.C. I do not know the ~~source~~ source of the "325" with which you start ^{Period} I in the fabricant printouts. I have ^{now} enough ^{change} names to carry me a little back of 300, at about which point they are pinned by the jars in the Kyrenia wreck, a few of which have name stamps. A slightly earlier deposit (in Rhodes, the Pipinou Apothetes) ^{it included late redfigure} has pieces with monogram stamps, and stamps naming AAZE(, which I have shown you, at one time or another. (Do you want to include this ~~AAZE(?)~~ AAZE(?) To correct these dates in the printout

you will need to know *made,* *in dating*
will require quite a thorough check, during which other ~~similar~~ errors should be

caught, e.g. ANTIFONOS in line 52 is dated 220 - 175, while ANIOAAQNIAAZ in line
~~xxxxxx~~ 69 is dated 200 - 175, but they are both Period III in my typed list I sent you.

again,
 220 is clearly too early (cf EAD 27, p.291). In line 19, the break is made at 210.

210 is better. 200 is ok if you want

to be more approximate. But I imagine you want consistency, at any rate, and not
 to suggest non-existent distinctions. I suggest you lay out the equivalents as
 you did in your letter of 8.I.78:

Period I : late IV B.C. - ca. 240

" II: ca. 240 - 210 (or later III)

" III: ca. 210 @ 175

" IV: ca. 175 - 150

" V: ~~xxxxxx~~
 second half of 2nd B.C.

" VI: late 2nd - early 1st B.C.

" VII: 1st B.C.

and correct as necessary
 Then get somebody to check all the date entries from the Periods as given in

Apart from making the equivalents consistent,
 my typed fabricant list. They will find for instance that AAEANAPOS in line 35 has

been put into Period I, whereas the name occurs only in stamps datable in the second

half of the 2nd c. or later. They will find APIETION of R 92 C of late Period II who has

been omitted

given to early date of R 92 A-B (given
 as probably to change), ~~which~~

~~given~~ whereas he is a rather well-known fabricant of the late 2nd century (IIC
in my typescript); a good reference for him would be Tarsus I, ^{p.} 140 and fig. 114,

no. 17. *They will find more, since our check list ~~was~~ ^{has got}
only through ~~you~~ line 124 of your sheet 19.*

In general on references, the citations seem to me terribly longwinded. You
clearly have some short titles (e.g. "Nilsson" with no title, no date, no page
references, just the number), why not have more? E.g. "EAD 27 no. E 1" is enough
to put ^{EAD} for the reference for AFOPANAE, and one looks (as in the case of "Nilsson")
at the short-title list for how it works. (Your lines 23, 24, 25). Then, for this
name there are far more ^{is} ~~citations~~ ^{is} than are useful. Cite EAD 27, which has a
summary on the style, etc. of this fabricant; also Ath. Mitt. 1974 which gives
(p. 200) a specific corrected date for his activity or a known part of it (221-199
B.C.) and Amphoras fig. 25 because it has a good photograph of a stamp with this
name, whereas the others have not. Why cite Nilsson's catalogue, where the names
are available alphabetically, when dates and photographs can be cited elsewhere?
(More to the point to mention when a name is not in Nilsson's catalogue, and give
a page reference to his introduction if you find it there.) For AFOPANAE, why
cite Hesperia III when we have the much better references in EAD and Ath. Mitt. ?
^{I would like} ^{dates}
I would use as the date of this fabricant those from Ath. Mitt. rather than those
^{superseded} ^{thanks} To mop up AFOPANAE, I do not think he should be given a circumflex.

(Use also for Kdeav(a))

19/55 ANTIAOTOS - ~~omit~~ (change)

after 19/64, omission of R 72 C who is later.

19/84 APIETION R 92 C He is listed as IIc, that is late II. In the printout he has been given an unusual version of the equivalent of Period I. He is now dated in the last decade of the 3rd century. You can say ca. 210 if you like.

19/102 APIETONOKOS R 105 the reference is wrong in BCH 1952, it should read nos. 18 and 19 (not no. 17). Note the date here is also wrong - he is (late) Period I, as listed in the typescript.

19/121 AΣKΛANIAΔΑΣ is the way it reads, with alpha.

now
19/141 I don't believe in this resolution of the monogram, since we already have BOHO in stamps of the same period, so it should not be supported by my fabricant number, without some indication.

In a detailed check I made with MΣH, we got through 19/125. The rest of my comment is just a spot check only.

19/248 EYZEYZ his date is omitted A sort of reference for him:
Crowfoot, The Objects from Samaria, London, 1957, p. 383. (Supplied by us.)

Omit 20/44 and 20/62, as both R 319 and R 343 have asterisks (indicating eponyms).

20/67 MAPZYAZ R 350 No date is given in the typescript. His activity was mostly 1/4 of 2nd century B.C., but he had some late types in the 2/4 of the 2nd.

These types of Period IV are discussed in EAD 27, p. 314 under E 37. In the printout the reference is correct, but the text has been hastily read and the wrong date extracted.

I am happy to take from you several rough breathings

31 July 1986

Dear Virginia,

As I said in Athens, I have had a "print-out" of the Rhodian fabrics only, made, for you to look at. It is rather a forbidding document as it stands, but I thought it best for you to see it at its first, but once corrected, stage, before we proceed any further, & hope it is absorbed in the general Rhodian file which it would be very cumbersome to handle — and to post — as it is, I am indebted to Hector for acting as postman.

1. The Roman script. This is fairly easy: Q = D, C = X, Y = Ψ , X = $\frac{1}{2}$; the others are, I think, self-evident.

2. Accents, breathings etc. An * before a name indicates a rough breathing, & there is no sign before a smooth breathing. Acute accents are represented by the figure 1 following the accented vowel AQA1QARCOS, circumflex by 3, AQAQOKLH3S; there are, naturally, no barytone accents. The symbol ↑ at the beginning of a line indicates a continuation from the previous line.

3. The ampersand, &, simply indicates an 'information-check' in each entry between the constituent parts, viz.: Name - place - date - reference.

4. What I hope you will do if you have time is simply to decide whether you want to alter any individual item, by deletion or addition for reference, or by correction. Each item is numbered in two sequences 19 and 20, so for reference it is sufficient simply at this stage to refer to 19/26 and that is 'ΑΔΑΥΩΔΕΩΣ, while 20/26 is ΚΑΤΗΓΟΡΕΩΣ. I have a duplicate copy.

5. The principle I have attempted to follow is, I think, what we agreed upon, viz: where there is no satisfactory publication, or discussion by you, we have simply put your file no: R42 = Agora file, Rhodes, fabricant 42 (the explanation will be given in the prolegomena); where you have discussed a fabricant we have added that. There is a residue preferences to Nilsson in cases where you thought the same fabricant might be involved, but of course we would gladly delete any of these you consider erroneous or misleading.

6. The quality of literal accuracy should be high. The list was punched, from cards made out by me in Athens, by a Danish epigraphist who is a demon for accuracy.

I have not sent you the eponyms because you provided full references for these, and they have consequently been embodied in the main Rhodian file, & it would mean I would have to send you 18 sequences. I could do this, but I think it would be better, if you wished to see it, to let it pass through the next Computer-phase, which is easier to read, but has no serial numbers.

One other point. You may be confused at first by the difference between 'BC' and 'B' - the explanation is that the first is used for specific dates, e.g. 175-150 BC, the latter for century or part-century dates, e.g. 19/27, "A. Iwos 2/1B = "late 2nd-early 1st cent BC".

The queries ^{immediately} after 'Rhodes' (e.g. 19/39 "A. Iwos, 19/51 Arri'bag) indicate that the name is either notably, though perhaps not exclusively, Serrile or foreign, & that we do not claim a positive Rhodian origin for the individual. It is possible that one or two have been actually omitted from this list for the same reason, where the doubt seems to us very strong. In that case the person in question appears with exactly the same reference to R- in the file of those of 'unknown origin'.

I should finally add that there is no difficulty about adding names at this stage, if necessary.

I'm sorry there is no much detail here, but I am naturally very anxious you should not have to scratch your head unnecessarily. Similarly if you wish to keep the list for any purpose please do so, since I have, as I said, a duplicate from which to work.

Yours ever

John

13 March 1986

Dear Virginia,

I'm wondering whether I could parallel your Thesaur
'Αποστροφος. Tho' I could not say rather the actual usage, in
both halves, occurs elsewhere without a prolonged search, the following
(which could no doubt be multiplied) show that 'Απο(ι/ε)- is
well authenticated:

- 'Αποίλοχος : Moretti, Olympionikai, no. 206 (Debes, Boettia)
'Αποστροφιδης : BCH 70, 1946, p. 477, no. 3, 1 (Thespiae, "
'Αποστροφιδης : Delphes III, 1, 477, 9 (Boettia)
'Αποστροφιδης : IG IV, 1², 28, l. 87 (Achaia)
'Αποστροφιδης : FE, s.v. (Αποστροφ), masc. in papp.
(I can quote the first one as Koumanoudes, Ουφαικη Προσωπογραφία
(Bibl. Arch. Ec. 90, 1979), no. 282)

It was good to see you again. I returned to find so much lexicon
work awaiting me that I wonder how I shall emerge again. But we
are going to spend a week in Salsimena at the end of April, and perhaps
we shall be able to go to Verria as well.

Yours ever

Peter

If I find an 'Αποστροφος I
will let you know.

7. II. 80

34.01

Summary on ^{Ph. fab.} names
given, etc., by P.M.F.

No evidence for adding any of
those to our list of Rhodina fab.
They are with:
misreading, or
chrysois, or
not Rhodina (probably or surely)

- with possible exception of

KΔεωρίλας (seen but not ident.
as Ph.)

KΤΥσιφωv (now seen)

A general report on the progress of the work on the Lexicon for the year 1978/9 is circulated herewith. It is emphasized that this is not a cumulative report, and does not repeat in full accounts of work completed at an earlier date. Any comments, corrections, or offers of further assistance would be welcome.

November 1979

Oxford

LEXICON OF GREEK PERSONAL NAMES

A. ANNUAL REPORT

1978/91. General Report

The date of completion depends upon the delivery of completed material by a number of unpaid collaborators overseas and at home. Their productivity depends on the amount of time they are able to give to the work, and though they are aware that we would like to see the first phase of the operation - the collection of data - completed by 1981, it is impossible to tie our collaborators down to a rigid timetable, and since one or two of the are only now beginning their work (see below under Progress Report), and some have yet to begin, we must obviously allow for a delay. The Computer programming will, as previously forecast, continue for a considerable time after the completion of stage I, and this too depends on factors which are hardly controllable - the smooth functioning of the computer itself, the amount of correction necessary on print-outs etc. In addition a great deal of editorial work is necessary both before and after computerization.

However, progress in both phases of the work continues uninterrupted, and the prospect of a completion-date roughly within the envisaged period remains.

In the course of the present year, partly as a result of the construction of a 'Porson' Greek font for the computer

the Oxford University Press has offered to publish the Lexicon in normal format (as opposed to microfiche) from 'photo-ready' copy; i.e. from a completely corrected print-out. This offer was accepted by the Committee, and given the blessing of the Council of the Academy. Both for practical reasons (the bulk of the material, when published in normal format), and because of the later date of commencement of the accumulation of data in some peripheral areas.

The Committee has decided that the publication should be in two parts, Vol. I covering the Greek Mainland, the Balkans, Italy and Sicily, Cyrenaica, the Aegean Islands and the Coastal regions of Asia Minor, Vol. II, Syria, Palestine, Egypt, the regions of the Anatolian Plateau and the trans-Euphratic territories. A terminal data for the inclusion of newly published material for Vol. I has been set at the end of 1980 (i.e. no material published after that

date will be included in Vol. I), and it is hoped that the collection of data will be complete by the end of 1982. It is estimated that a further two years will be required for purely editorial work, and the committee, on this basis, hopes that it will be possible, if the computer-printing does not create unforeseen difficulties, to submit the photo-ready copy to the Press at the end of 1984. Decisions regarding the final break-down of the material for publication will naturally be taken with the University Press.

2. Progress Report

1. (i). Literary sources (pagan). The bulk of this material has now been slipped, and Mrs. S. West of Hertford College has undertaken the completion of this task. Mr. K. Jenner spent the year revising the slips prepared by Mrs. Burton in the first two years of the project and will continue this work at least for another year.

(ii). Literary sources (Christian). Dr. Norris of the Emmanuel School of Religion, Johnson City, Tennessee, and the University of Tübingen, has completed his slipping the Church Historians, and his slips have now been received. The Committee is most grateful to Dr. Norris for his voluntary work in this field. Dr. Crabbe has continued her work on the Acta Sanctorum which she has now completed to the end of April, and has also worked through the proof material of Vol. II of the PLRE, extracting the necessary references. Her work on the Acta will continue to occupy her through the coming year. Apart from this, the only outstanding major Christian text to be slipped is the correspondence of St. Nilus (over 1000 letters).

(iii). Latin authors. The following authors have now been slipped, mainly by Mr. N. Kay: Aulus Gellius, Quintilian, Ammianus Marcellinus, SHA, Vitruvius, Lucilius, Apuleius, Livy, Suetonius, Cicero, Pliny, NH, Caesar, Varro, Cato, Columella, Petronius, Juvenal and Persius, Martial, Tacitus, Statius, Horace, Pliny iun. St Jerome (letters), Symmachus, Ausonius, it is felt that this represents a sufficient selection of Latin authors.

2. Inscriptions. Slipping of the Mainland and Aegean areas is now largely complete. Dr. Osborne, with the aid of Professor J. Traill, has completed the Attic material down to the Imperial period, the islands of Rhodes and Chios are also finished, and it is hoped that the material from Crete, which Dr. L.H. Jeffery is preparing, will be available shortly. Mrs. A. Griffin, who has been at work on Delphi since joining the project in December 1978, has now completed approximately two-thirds of the total amount, and she estimates that the total Delphi onomastikon should be completed within six months. The slipping of material from Thessaly and Euboea remains to be completed. Material for Cyrenaica (Miss Reynolds) and Magna Graecia and Sicily (Dr. M. Crawford) will, it is hoped, be available next year. The slips for Rumania excluding Dacia, have been received from Mrs. Dorutziu-Boila of Bucharest, and Professor A. Bodor of Cluj has kindly volunteered to provide the material from Dacia. The Yugoslav material, prepared, for the lexicon by Miss Jagust of Belgrade, was revised and completed with great generosity by Professor F. Papazontou.

The Committee wishes to record its continued gratitude to the Institute of Advanced Study, Princeton, and particularly to Professor C. Habicht, for the aid it has rendered the Attic part of the project by enabling Dr. Osborne and Professor J. Traill to work together on much of the material at Princeton.

Asia Minor. Considerable progress has been made in this region, which, with the mainland largely completed, forms the focal point of our activity. In addition to the Mysian material slipped at an earlier stage by Dr. Mitchell (especially the Cyzicus region, Ilium, Alexandria Troas, Pergamon), the cities for which volumes have been published in Professor Merkelbach's new Corpus of the Greek cities of Asia Minor (Lampsakos, Assos, Erythrai, Notion), have all been slipped by Miss L. Pitts who has also completed the inscriptions of Teos. In Caria Miss E. Rice has completed most of her work on the coastal cities, while Mr. S. Hornblower has generously slipped the inscriptions of most of the inland region west of the Marsyas river (Lagina, Mylasa, Panamara, Stratonicea); this operation, demanding expert knowledge of a very complex body of material, has disposed of a very considerable problem. Further east in Caria the Committee has been promised the material from Aphrodisias from Mrs. Roueché (working for Miss Reynolds), while Miss Rice will cover the rest of Caria east of the Marsyas river (Tabai etc). The material from Mysia, Lycia, and Pamphylia is largely covered or in hand (Dr. Mitchell, Dr. S. Jameson Dr. T. Bryce), and the Committee has recently received from Commander T. Mitford the onomastikon of Rough Cilicia completed by his father, for which it wishes to record its thanks. The outstanding areas to be attacked are Ionia, Lydia, (for which Professor Foss hopes to be able to provide the material from Sardis, while a volume of TAM covering N.W. Lydia, prepared by Professor P. Herrmann, due for publication in the near future, should considerably lighten our task), and Bithynia (of which the volume of TAM covering Nicomedia and neighbourhood, was published by Professor F.K. Dörner in 1978) on the West, and Pontus and Paphlagonia on the North. In these latter regions the committee hopes to be able to make use of material now being collected by the Academy-sponsored Regional Epigraphical Corpus of Asia Minor (RECAM) undertaken by the British Institute of Ankara. Three tasks of major importance remain: the slipping of material from Smyrna, Ephesos and Miletos. The first of these, we understand, is to appear shortly in the corpus of the Greek cities of Asia Minor, and we have commenced work on the onomastikon of Miletos.

Syria, Palestine, Egypt, etc. As explained above the material from this region will form the main part of Vol. 11. The collection of material is proceeding, and is in the hands of Professor J. Bingen (Egypt), Monsieur M. Sartre (Syria) and Dr. B. Isaac (Palestine). Material from these areas relevant to Vol. 1 (i.e. natives of regions covered in Vol. 1) has been extracted and added to the files of Vol. 1.

3. Papyri. Work on documentary papyri, which forms part of Vol. 11 has been largely suspended, since Mr. D. Jones, the main assistant, was granted a year's suspension by the Committee to enable him to complete work on his Oxford D Phil. It is hoped that he will recommence work in October 1980. Dr. J. Rea has meanwhile continued to slip material. The anonymous literary papyri have now been slipped by Mrs. S. West.

4. Coins. The Committee commissioned Mr. C.J. Howgego to continue, and if possible to complete, the file of names on coins, on which a considerable amount of work had already been done by Dr. D. Nash and Miss. King. Much of the available material, C. Peloponnesus and other parts of the mainland (Dr. Nash), Rhodes and the Dodecanese (Mr. R. Ashton), Erythrae, Clazomenae etc. (Dr. P. Kinns) has already been incorporated into the main regional files. Mr. Howgego has so far completed the Imperial material from Ionia, and is now commencing work on the Imperial issues of Caria, while Dr. Nordbo of the University of Oslo has made available to us his corpus of the numismatic material of Cnidos.

5. Archaeological material. Work in this sector, in the hands of Dr. A. Johnston is now almost complete. Since the last report, Dr. Brashinsky of Leningrad and Dr. Vinogradov of Moscow have provided further material from S. Russia and the Black Sea, and their contributions have enabled the Lexicon to include much new material.

6. Bibliographical material. The compilation of these entries has now begun. As originally envisaged, it is intended to restrict these entries strictly to discussions of the meaning, typology, and distribution of names, and to exclude references both to undifferentiated lists of such names and to prosopographical discussions.

7. Computer Programme.

Material already computerised, in whole or in part (wholly or partly edited)

Peloponnesus (part); Boeotia (part); Cyprus;
Kos; Dodecanese (less Rhodes); Western Greece;
Illyria-Epirus; Aetolia-Acarmania; (punched only);
Thrace (punched only); Samos; Samothrace; (punched only); Thasos; punching in progress on Rhodes,
Cyclades, and Macedonia.

Rhodian fabricant names

Dear Virginia,

letter of Fraser

Our Lexicon Committee met yesterday to approve the draft Annual Report and Budget for 1979/80, and it was pointed out again that the sum of £250 earmarked for your contribution to the Lexicon was still unpaid, and I was asked to sort the matter out with you without further delay. So I am writing to ask you whether you will accept this figure, if a draft is sent to you now. I realise from what you said previously that you considered this sum insufficient, but I think it is only fair to the Committee to tell you that this sum was, and is, very much larger than our normal payments to external collaborators, and that we made this offer of a larger fee because you had explained that you would need to employ an assistant for the purpose. We are of course fully aware that £250 now is in this country not what it was five years ago, but with the recent strengthening of the pound against the drachma the difference in Greece is less than it was a year or two ago. So I very much hope that you will agree to this, and thus enable me to ask the Academy to pay the sum.

Turning to the operational side, I hope you will not trouble yourself over letting us have further material, if you feel that you are under pressure. I shall be in Athens in the New Year, and I would be most willing to copy the outstanding names onto slips myself from your files.

I will be sending you a copy of our Annual Report shortly, and I hope it will interest you.

Yours ever

Peter

1979

Dear Peter:

I have here two letters from you, one of June 7, received after I came back from two weeks in Rhodes, collecting a lot of data, the other without date, but cancelled on the envelope as of 25.X.79. I am now just getting ready to go to the US day after tomorrow. I did not want to leave you without reply, but have no time to write at length.

No, I do not accept your proposed draft.

As to your handling of the names of fabricants of amphoras in the lexicon, we would be able with relatively little trouble to send you such publication references as there are for the stamps of Kos, since the catalogue for publication of our Koan volume is ready enough to yield this information in an orderly way. Early in 1978 I asked you why you had had Miss Sherwin White include ^{in her *Onomastikon*} exactly one of the 60-odd names we had sent her, and you replied in a way that seemed to me off the point (enclosed photocopy). If you now would like to have this information for Kos, let me know, and let me know whether these names will be listed under Kos.

For Rhodes, I am sorry to say we do not have time now to do the work out of order from the point of view of my own research, as we did for the eponyms. Those, you have, and those after all are what you really want. I suggest you use the list of fabricants of 1965, with which nothing published is comparable. Omit from this all entries on which there is an asterisk. You don't have to look at the eponym list and make subtractions. All these names with asterisks are known eponyms of the period suggested, but out of excess of caution I listed as possible fabricants those persons who appeared in unrestored stamps without the preposition. I now know that eponyms are many times named without the preposition. Omit then all entries with the asterisk, but not all names that are sometimes listed with an asterisk: cf. for instance no.239, EYOPANΩP - the one with the head of Helios is certainly a fabricant.

- 2 -

I certainly suggest that you include no names as Rhodian fabricants that do not appear in our typed list. I do undertake to look up any of those, if you send them to me with a reference as to where you found them. Stamp names cannot be taken indiscrimately from old publications, even from Nilsson; your list would be full of scholars' uninformed restorations, such as IINIONIKOZ in your Rhodian book. For that name actually Nilsson indicated a doubt, blaming it on a publication, as a single example.

Remove from our typed list the queried name BOYOHPOZ , no.133; too bad, but it seems to be rather BOHOOZ , cf. no.129. (You remember, it was a resolution of a monogram.)

Yours,

Sorry, but it does not work for outsiders to research in our files.

Omit then all entries with the asterisk, but not all names that are sometimes listed with an asterisk: cf. for instance no.239, EYOPANSP - the one with the head of Helios is certainly a fabricant.

- 2 -

I certainly suggest that you include no names as Rhodian fabricants that do not appear in our typed list. I do undertake to look up any of those, if you send them to me with a reference as to where you found them. Stamp names cannot be taken indiscriminately from old publications, even from Nilsson; your list would be full of scholars' uninformed restorations, such as IIIIONIKOZ in your Rhodian book. For that name actually Nilsson indicated a doubt, blaming it on a publication, as a single example.

Remove from our typed list the queried name BOYOHPOZ , no.133; too bad, but it seems to be rather BOHPOZ , cf. no.129. (You remember, it was a resolution of a monogram.)

Yours,

Sorry, but it does not work for outsiders to research in our files.

On PMF's LTR of 7.VI.79

Just what is he proposing I send me "very quickly"?

Is it a remainder?

What he already has documented himself
cannot be relied on: look at Hippocrates in
his recent pub.

Epr. - fets. with some names.

He said himself he could always add names
later - let's add all the PM fets.

- where and how to add?

What about the Koz names,
now put in the remainder?

Maybe he does not need a

Dear Peter,

We have some bad results for 2 weeks in
 Rhodes, ^{Walter} Wallace of Toronto and his sister ^{Mr. Walter} who
 works with me, and J. Wallace is engaged
 in collecting many data on capacities of amplifiers
 in the interests of making a statement on whether
 or not one can thus arrive at information
 on standards. I was concerned again with
 making records, photos and otherwise, of ^{name} of
 names, spongers and fabricants, like myself, my
 machine, seen to be working out, and results
 are not too promising.

I am not quite clear what it is that
 you letter of Jan 7 proposes that I do

7 June 1979

Dear Virginia,

I wonder if I may call on you once again. Since we last communicated, I have completed the Rhodian onomastikon (some 16,000 names, I reckon), except for the fabricants of the amphora-handles, who may or may not be Rhodian (though I would guess that a fairly high proportion of them are) but have to be included in this operation. I have done what I could myself in this connection, using Nilsson as a base and all your lists and publications in sequence. I now find that checking my list (some 260 names strong) against the typescript list you sent me a good many years ago, & subtracting from that list all the eponyms in the current list which we have have used for the Lexicon, there are outstanding some 140 names, presumably those of fabricants. They have presumably occurred in innumerable excavation reports, some published, some unpublished maybe, and I wonder whether it would be possible for you to document this residual list to the extent that that is necessary. I am not willing to

? send you this without giving you a fair chance to say 'No, can't be done', but if you think it can I could send you the list very quickly. (I have, incidentally, subtracted from it the names from Delos listed in BCH 76, 1952, & included them in my file with that reference, except where they recur fully published in EAD 27)

The Lexicon rolls along fairly happily. Now Ket Rhodes is largely completed - tho' I still have the Peraea to do - I am finding editing other people's material takes up much of my time. The Press here will print the Lexicon from 'camera-ready' copy, and I aim at letting them have the material ready in 1984; but the computer moves at the pace of a dinosaur, so that may be optimistic.

I hope to be in Athens after Christmas at the School for a month or two - without my Lexicon files I fondly hope.

Yours ever

Peter
